Network Ahmed Rebai,2010-08-18 Bayesian networks are a very general and powerful tool that can be used for a large number of problems involving uncertainty reasoning learning planning and perception They provide a language that supports efficient algorithms for the automatic construction of expert systems in several different contexts The range of applications of Bayesian networks currently extends over almost all fields including engineering biology and medicine information and communication technologies and finance This book is a collection of original contributions to the methodology and applications of Bayesian networks It contains recent developments in the field and illustrates on a sample of applications the power of Bayesian networks in dealing the modeling of complex systems Readers that are not familiar with this tool but have some technical background will find in this book all necessary theoretical and practical information on how to use and implement Bayesian networks in their own work There is no doubt that this book constitutes a valuable resource for engineers researchers students and all those who are interested in discovering and experiencing the potential of this major tool of the century *Advances in Computers* ,1994-09-29 *Advances in Computers* **ECBS 2005** Jerzy Rozenblit,Tim

O'Neill,Jianfeng Peng,2005-01-01 This annual conference continues to explore advance methods and techniques for the design development and deployment of complex systems whose behavior is largely determined and controlled by computers ECBS 2005 encompasses many facets system modeling formal methods requirements specification and engineering architectures system integration project management and life cycle issues This emerging discipline provides innovative techniques for tackling complexity which is inherent in integrating software hardware and communication components into a complete system *Advances in Service-Oriented and Cloud Computing* Maria Fazio,Wolf Zimmermann,2020-12-04 This volume contains the technical papers presented in the workshops which took place at the 7th European Conference on Service Oriented and Cloud Computing ESOC 2018 held in Como Italy in September 2018 Joint Cloudways and OptiMoCS Workshop 14th International Workshop on Engineering Service Oriented Applications and Cloud Services Additionally the papers from ESOC 2018 PhD Symposium and ESOC 2018 EU Projects Track were included in the volume The 22 full papers were carefully reviewed and selected from 34 submissions The papers focus on specific topics in service oriented and cloud computing domains such as limits and or advantages of existing cloud solutions future internet technologies efficient and adaptive deployment and management of service based applications across multiple clouds novel cloud service migration practices and solutions digitization of enterprises in the cloud computing era federated cloud networking services

Advances in Computers Atif Memon,2012-04-24 Since its first volume in 1960 *Advances in Computers* has presented detailed coverage of innovations in computer hardware software theory design and applications It has also provided

contributors with a medium in which they can explore their subjects in greater depth and breadth than journal articles usually allow. As a result, many articles have become standard references that continue to be of significant lasting value in this rapidly expanding field. In depth surveys and tutorials on new computer technology. Well known authors and researchers in the field. Extensive bibliographies with most chapters. Many of the volumes are devoted to single themes or subfields of computer science.

Critical Insights from Government Projects Ali M. Al-Khouri, 2013. Summary. Critical Insights From Government Projects examines the implementation of major projects in the governmental field and more specifically those in the Gulf Cooperation Council (GCC) countries. The book is divided into four research categories: project management, project evaluation, electronic services, and technology implementation. The chapters cover the theory and practice of the implementation in the public sector of advanced technologies in a governmental setting. The research in this book was conducted and written by senior government officials and practitioners. The chapters include key critical insights from several strategic government initiatives, general management frameworks, reflections, and a review of fundamental lessons learned. Key Features: Includes a rare insight into major government projects in the Middle Eastern region. Examines implementation of major projects from a practical perspective. The review of the various projects is set against a broader framework, making the analysis of the implementation far more rigorous and relevant. Written by leading players in the area. Critical Insights From Government Projects is easy to read and is highly practical. The Author: Dr Al Khouri is the Director General Under Secretary of the Emirates Identity Authority, a federal government organisation established in 2004 to rollout and manage the national identity management infrastructure program in the United Arab Emirates. He has been involved in the UAE national identity card program since its early conceptual phases during his work with the Ministry of Interior. He has also been involved in many other strategic government initiatives in the past 22 years of his experience in the government sector. Contents: Project management, projects management in reality, lessons from government IT projects, an innovative project management methodology, Projects evaluation, UAE National ID Programme case study using quality models to evaluate large IT systems, Electronic services, electronic government in the GCC countries, Technology implementations, digital identities and the promise of the technology trio: PKI, smart cards, and biometrics, IRIS recognition and the challenge of homeland and border control security in UAE.

Environments for Multi-Agent Systems II Danny Weyns,H. Van Dyke Parunak,Fabien Michel,2006-02-26 This book constitutes the thoroughly refereed post proceedings of the Second International Workshop on Environments for Multiagent Systems E4MAS 2005 held in July 2005 The 16 revised papers presented were carefully reviewed and selected from the lectures given at the workshop The papers are organized in topical sections on models architecture and design mediated coordination as well as applications *Software Evolution with UML and XML* Hongji Yang,2005-01-01 This title provides a forum where expert insights are presented on the subject of linking three current phenomena software evolution UML and XML *Relating Software Requirements and Architectures* Paris Avgeriou,John Grundy,Jon G. Hall,Patricia Lago,Ivan Mistrík,2011-08-03 Why have a book about the relation between requirements and software architecture Understanding the relation between requirements and architecture is important because the requirements be they explicit or implicit represent the function whereas the architecture determines the form While changes to a set of requirements may impact on the realization of the architecture choices made for an architectural solution may impact on requirements e g in terms of revising functional or non functional requirements that cannot actually be met Although research in both requirements engineering and software architecture is quite active it is in their combination that understanding is most needed and actively sought Presenting the current state of the art is the purpose of this book The editors have divided the contributions into four parts Part 1 Theoretical Underpinnings and Reviews addresses the issue of requirements change management in architectural design through traceability and reasoning Part 2 Tools and Techniques presents approaches tools and techniques for bridging the gap between software requirements and architecture Part 3 Industrial Case Studies then reports industrial experiences while part 4 on Emerging Issues details advanced topics such as synthesizing architecture from requirements or the role of middleware in architecting for non functional requirements The final chapter is a conclusions chapter identifying key contributions and outstanding areas for future research and improvement of practice The book is targeted at academic

and industrial researchers in requirements engineering or software architecture Graduate students specializing in these areas as well as advanced professionals in software development will also benefit from the results and experiences presented in this volume
