Brewer, Ludy T.

Benjamin, Jr., 2001-08-01 Like its predecessors Volume III of the Handbook for Teaching Introductory Psychology provides introductory psychology instructors with teaching ideas and activities that can immediately be put into practice in the classroom. It contains an organized collection of articles from Teaching of Psychology TOP the official journal of the Society for the Teaching of Psychology Division 2 of the American Psychological Association. Volume III contains 89 articles from TOP that have not been included in other volumes. Another distinction between this volume and its predecessors is its emphasis on testing and assessment. The book is divided into two sections. Section One Issues and Approaches in Teaching Introductory Psychology contains 52 articles on critical issues such as how to approach the course, understanding students' interests, perceptions, and motives; students' existing knowledge of psychology including their misconceptions; a comparison of introductory textbooks and tips on how to evaluate them; test questions and student factors affecting exam performance; an overview of different forms of feedback; giving extra credit; and how to deal with academic dishonesty. Section Two consists of 37 articles that present demonstrations, class and laboratory projects, and other techniques to enhance teaching and learning in both the introductory as well as advanced courses in the discipline. This section is organized so as to parallel the order of topics found in most introductory psychology textbooks. Intended for academicians who teach the introductory psychology course and/or oversee grad assistants who teach the course, all royalties of the book go directly to the Society for the Teaching of Psychology to promote its activities to further improve the teaching of psychology. **Structure of Boredom**,

The Psychological Record, 1959 *Portraits of Pioneers in Psychology* Gregory A. Kimble, C. Alan Boneau, Michael Wertheimer, 2012-08-21 A major aim of the books in this series is to promote psychology's appreciation of the neglected giants in its history. The chapters document the significance of these early contributions, many of them made more than a century ago. Most of the chapters are revisions of invited addresses delivered at psychological conventions. Several of the authors are students, colleagues, or offspring of their pioneers, and all of them are intrigued by the life and work of the psychologists about whom they have written. All of the portraits are informal, on occasion even humorous. Some are impersonations, telling stories in what were or might have been the pioneer's own words. This book provides source materials for teachers of undergraduate courses in psychology, particularly the history of psychology, who want to add a personal view in their lectures and offer interesting readings for their students. Each of the five volumes in this series contains different profiles, thereby bringing more than 100 of the pioneers in psychology more vividly to life. **Learning Disabilities and Brain Function**

William H. Gaddes, 2013-04-17 Some may say that this book is long overdue; others, including myself, will state that the book appears at just the right time. The latter is likely more true for it is doubtful that many in the professions would until now link issues of learning disabilities with those of neurophysiological dysfunction in the manner in which ultimately must be the case. As a matter of fact, there are those who deny the relationship completely. Lee Wiederholt, 1974. In his short but excellent review of the historical perspectives of learning disabilities, he traces the early interest in this problem.

to the work of Gall 1802 and to his successors Broca 1861 Jackson 1864 Bastian 1869 and a few others Each of these men would at the time of this writing be considered to have interests in the field of neurology although at the time of their investigations neurology per se was but a gleam in the eye of the anatomical beholder A relative detour then took place Cerebral palsy in the decades of the 1940s and 1950s caught the attention of researchers through the work of Winthrop Morgan Phelps orthopedist and George Deaver physiatrist and one or two other medically oriented individuals This was related to the writings of W J Little 1810 1894 It was however Kurt Goldstein Heinz Wemer both eminent German scientists and Alfred A **Junior College Journal** Walter Crosby Eells,1971 Includes Junior college directory formerly Directory of the junior college 1931 1945 Catalog of Copyright Entries, Third Series Library of Congress. Adler,2009-08-01 In this classic work Adler explores how man differs from all other things in the universe bringing to bear both philosophical insight and informed scientific hypotheses concerning the biological and behavioral characteristics of mankind Rapid advances in science and technology and the abstract concepts of that influence on man and human value systems are lucidly outlined by Adler as he touches on the effect of industrialization and the clash of cultures and value systems brought about by increased communication between previously isolated groups of people Among the other problems this study addresses are the scientific achievements in biology and physics which have raised fundamental questions about humanity s essential nature especially the discoveries in the biological relatedness of all living things Thrown into high relief is humanity s struggle to determine its unique status in the natural world and its value in the world it has created Ultimately Adler s work develops an approach to the separation between scientific and philosophical questions which stands as a model of thought on philosophical considerations of new scientific discoveries and its consequences for the human person **Medical Books and Serials in Print, 1979** R.
