Hellfire And Lightning Rods Liberating Science Technology And Religion:

Hellfire and Lightning Rods Frederick Ferre, 2018-06-21 Renowned philosopher Frederick Ferr invites us to contemplate a new world to be constructed out of the debris of modernity Hellfire and Lightning Rods displays a vision in which the dichotomies between religion philosophy science and technology can be seen as too narrow construals of a single but polyvalent organic world Ferr wisely notes that the conceptual worlds of premodern animism modern scientism and biblical orthodoxy have major internal flaws and create immense practical problems Yet while they are largely unconvincing to persons who see the need for postmodern approaches a successor to these views is nowhere near universally accepted In that context Ferr suggests that an important interim worldview that he calls multi mythic organicism will help humanity recover spiritual dimensions now lacking Hellfire and Lightning Rods Frederick Ferre, Religion's Power Robert Wuthnow, 2023 Religion s Power investigates the power dynamics in religious rituals discourse institutions identities and politics paying special attention to gender sexuality and race The Concept of Nature in Science and Theology Niels Henrik Gregersen, Michael W. S. Parsons, Christoph Wassermann, 1997 **Religion and Science** W. Mark Richardson, Wesley J. Wildman, 2012-10-12 Emphasizing its historical methodological and constructive dimensions Religion and Science takes the pulse of pertinent current research as the interdisciplinary study of science and religion gains momentum Religion and Science in Context Willem B. Drees, 2009-09-10 How should we think about religion science and their relationship in modern society Some religious groups oppose evolution some atheists claim science is on their side Others reconcile their beliefs with science or consider science and faith to deal with fundamentally different aspects of human life What indeed is religion belief or trust in God s existence How do we distinguish sense from superstition What does science have to say on such issues Willem B Drees considers contemporary discussions of these issues in Europe and North America using examples from Christianity and religious naturalism and reflections on Islam and Tibetan Buddhism He argues that the scientific understanding leaves open certain ultimate questions and thus allows for belief in a creator but also for religious naturalism or serious agnosticism By analysing the place of values in a world of facts and the quest for meaningful stories in a material world Religion and Science in Context offers an original and self critical analysis of the field its assumptions and functions and ends with a vision of its possible future *A Companion to Philosophy of Religion* Charles Taliaferro, Paul Draper, Philip L. Quinn, 2010-01-19 In 85 new and updated essays this comprehensive volume provides an authoritative guide to the philosophy of religion Includes contributions from established philosophers and rising stars 22 new entries have now been added and all material from the previous edition has been updated and reorganized Broad coverage spans the areas of world religions theism atheism the problem of evil science and religion and ethics Change Across Cultures Bruce Bradshaw, 2002-03 Points out the necessity of changing cultural narratives if real values transformation is to take place This is an important work Peter Riddell London Bible College Christianity and Ecological

Theology E. M. Conradie, 2006-10-01 There has been a proliferation of publications in the field of Christian ecological theology over the last three decades or so These include a number of recent edited volumes each covering a range of topics and consolidating many of the emerging insights in ecological theology The call for Christian churches to respond to the environmental crisis has been reiterated numerous times in this vast corpus of literature also in South Africa

Dictionary of Modern American Philosophers John R. Shook, 2005-01-01 The Dictionary of Modern American Philosophers includes both academic and non academic philosophers and a large number of female and minority thinkers whose work has been neglected It includes those intellectuals involved in the development of psychology pedagogy sociology anthropology education theology political science and several other fields before these disciplines came to be considered distinct from philosophy in the late nineteenth century Each entry contains a short biography of the writer an exposition and analysis of his or her doctrines and ideas a bibliography of writings and suggestions for further reading While all the major post Civil War philosophers are present the most valuable feature of this dictionary is its coverage of a huge range of less well known writers including hundreds of presently obscure thinkers In many cases the Dictionary of Modern American Philosophers offers the first scholarly treatment of the life and work of certain writers This book will be an indispensable reference work for scholars working on almost any aspect of modern American thought

God and the Chip William A. Stahl, 2009-08-03 Our ancestors saw the material world as alive and they often personified nature Today we claim to be realists But in reality we are not paying attention to the symbols and myths hidden in technology Beneath much of our talk about computers and the Internet claims William A Stahl is an unacknowledged mysticism an implicit religion By not acknowledging this mysticism we have become critically short of ethical and intellectual resources with which to understand and confront changes brought on by technology

Interruptions J. Matthew Ashley, 1998-12-08 Johann Baptist Metz is one of the most important Roman Catholic theologians in the post Vatican II period however there is no comprehensive overview of his theological career This book fills that gap It offers careful analyses and summaries of Metz's work at the various stages of his career beginning with his work on Heidegger and his collaboration with Karl Rahner It continues with his work in the nineteen sixties when he moved off in a radically different direction to found a new political theology culminating in his seminal work Faith in History and Society Metz addresses themes ranging from the situation of the Church after Auschwitz the future of religious life in the Church and the relationship between religion and politics after the end of the cold war J Matthew Ashley covers all of Metz's writings along with his crucial relationships to figures like Karl Rahner Martin Heidegger Ernst Bloch Walter Benjamin and the social critics of the early Frankfurt School Interruptions shows that despite the dramatic turn in the nineteen sixties there is an underlying continuity in Metz's thought Ultimately however the underlying continuity in Metz's career is defined by a spirituality a spirituality that is painfully yet hopefully open to the terrible suffering that characterizes our century a spirituality founded in the Prophets in Lamentations and in the figures of Job and the Jesus of Mark's Gospel This book shows

how Metz has tried to find theological concepts adequate for expressing this spirituality which he calls a Mysticism of open Eyes or of suffering unto God and to work out its political implications To this end the book has an opening chapter on the relationship between spirituality and theology and a closing chapter that shows that the most fundamental difference between Rahner and Metz is rooted in the different Christian spiritual traditions out of which the two operate Interruptions is essential reading for anyone interest in Spirituality and Mysticism and in their relation to political philosophy

Science, Technology, and Religious Ideas Mark H. Shale, George W. Shields, 1994 This book offers new insight on an old issue The last two decades of scientific progress have raised new questions about the integrity of religious ideas and values A range of contributors address the following themes the Nature of Science Religion and Technology Recent Physics and the Design Argument and the History of Science Religion Interaction Contributors Frederick Ferre Thor Hall Stanley L Jaki Jacquelyn Ann K Kegley Ron Levy Ronald Mawby Ernan McMullin Edward L Schoen Mark Shale George W Shields and Dennis Temple Co published with the Institute for Liberal Studies

Technology and Values Kristin Shrader-Frechette, Laura Westra, 1997-10-30 Technology and Values provides a highly useful collection of essays organized around issues related to science technology public health economics the environment and ethical theory The editors present effective introductions that provide background information as well as philosophical tools and case studies to facilitate understanding of the variety of issues emanating from the most significant developments in technology including the effects on privacy of the widespread use of computers to store and retrieve personal information and the ethical considerations of genetic engineering

God & Money Charles McDaniel, 2007 God Money confronts the current dominant right wing Republican evangelical Christian view that unfettered market driven capitalism and Christian faith and values are compatible Drawing on such ethical luminaries as Reinhold Niebuhr G K Chesterton Peter Berger and John Paul II author Charles McDaniel shows that to reverse the current decline in public morality capitalism must be balanced by enduring religious and moral values Challenging the captivity of Christian culture by free market global capitalism McDaniel joins other Christian ethical visionaries in advocating a redemptive economy one that champions individual human dignity true community and the moral regeneration of cultural traditions in vital dialectic with the inevitable market capitalism of the contemporary world

Broken Knowledge Younglae Kim, 1997 Broken Knowledge explores the impacts of the scientific and scholarly ideal of the modern university on theological education at Union Theological Seminary from 1887 1926 During this period the marks of the modern university specialization the elective system professionalization and the empirical research orientation were incorporated into theological education While vigorously implanting the new university s structural and functional patterns into theological education the seminary and its theologians strove to bring theological discussions into the arena of secularized academia to achieve independence from church dogmatism to expand the scope of theological outlook in social domains and to bind science and religion together Without doubt these efforts deserve due recognition However it is also undeniable that the

current problems in theological education the fragmentation of the theological curriculum and the loss of a holistic search for religious truth have to do with the seminary's adaptation to the new university ideal such as uncritical specialization and narrow modern epistemology at the turn of the century This book explores how the decline of theology or the sacred in our modern world is connected with the dominance of modern scientific ways of knowing in our search for truth and the lack of holistic approaches to the issue of faith and knowledge This book searches for the recovery of wholeness in theological education and higher learning in general *Unity Of Nature, The: Wholeness And Disintegration In Ecology And Science* Alan Marshall, 2002-10-04 The idea behind *The Unity of Nature* is a strong theoretical theme in a number of scientific and environmental fields from ecosystems ecology through quantum physics to environmental philosophy and ecopolitics giving rise to an inspiring optimistic socially responsive and environment friendly worldview The fields of science and environmentalism have inherited this theme of natural unity through an intellectual lineage that encompasses many non scientific and non environmental fields such as sociology theology and political philosophy Many of these fields have used natural unity in a way which is in stark opposition to the metaphysical and political desires of those who promulgate the unity of nature for progressive social change This book discusses how this has transpired and examines the social and intellectual processes that have been at work These include the social construction of the Organicism versus Mechanicism debate in ecology the intellectual links between neo classical economic principles and the New Sciences the techno scientific background of Gaia theory and the social conservatism of ecological functionalism *The Enchantments of Technology* Lee Bailey, 2010-10-01 In *The Enchantments of Technology* Lee Worth Bailey erases the conventional distinction between myth and machine in order to explore the passionate foundations concealed in technological culture and address its complex ethical moral and social implications Bailey argues that technological society does not simply disenchant the world with its reductive methods and mechanical metaphors then shape machines with political motives but is also borne by a deeper subversive undertow of enchantment Addressing examples to explore the complexities of these enchantments his thought is full of illuminating examinations of seductively engaging technologies ranging from the old camera obscura to new automobiles robots airplanes and spaceships This volume builds on the work of numerous scholars including Jacques Ellul and Jean Brun on the phenomenological and spiritual aspects of technology Carl Jung on the archetypal collective unconscious approach to myth and Martin Heidegger on Being itself Bailey creates a dynamic interdisciplinary postmodern examination of how our machines and their environments embody not only reason but also desires **On Human Nature** Armin Grunwald, Matthias Gutmann, Eva M. Neumann-Held, 2013-04-17 Modern molecular technology in the so called life sciences biology as well as medicine allows today to approach and manipulate living beings in ways and to an extent which not too long ago seemed Utopian The empirical progress promises further and even more radical developments in the future and it is at least often claimed that this kind of research will have tremendous effects on and for all of humanity for example

in the areas of food production transplantation medicine including stem cell research and xenotransplantation therapeutic genetic manipulation and cell line cloning of cell lines or tissues and of biodiversity conservation strategies At least in Western industrialized countries the development of modern sciences led to a steady increase of human health well being and quality of life However with the move to make the human body itself an object of scientific research interests the respective scientific descriptions resulted in changes in the image that human beings have of themselves Scientific progress has led to a startling loss of traditional human self understanding This development is in contrast to an understanding according to which the question what it means to be human is treated in the realm of philosophy And indeed a closer look reveals that without denying the value of scientific progress science cannot replace the philosophical approach to anthropological questions

Reflections on My Call to Preach Fred B. Craddock, 2009 Travel with revered preacher and author Fred Craddock through his early years as he considers what made him take to the pulpit For some reason I felt I had to say Yes or No to the ministry so I could feel free again My siblings and friends talked almost casually about options and preferences as to careers but with no evident sense of urgency Not so with me I did not then nor do I now know whether the burden of choice was a trait of personality a kind of super conscientiousness whether the calling to ministry itself carried a weight a burden peculiar to the task itself Rightly or wrongly when I thought of possibly becoming a journalist that would be a choice 100 percent mine When I considered becoming a minister that was not totally my decision I was responding to God's will for me Of course I had been told that journalists lawyers teachers merchants farmers all could understand their lives as a vocation a calling but what I am telling you is that I perceived I felt I experienced the idea of being a preacher as different and that difference was sobering even burdensome That's why advice about not being in a hurry taking my time was not helpful even if wise If it was my decision why could I not make it now if it was God's decision why did not God tell me or at least tell my father or my mother I prayed for the ache to leave me Excerpt from Reflections on My Call to Preach
