HEURISTICS

A heuristic is a mental shortcut that enables people to make quick but less-than-optimal decisions.

OVERVIEW

Tversky & Kahneman created the concept of heuristics in the early 1970s. They describe them as "judgmental shortcuts that generally get us where we need to go – and quickly – but at the cost of occasionally sending us off course." Heuristics are both positive and negative for our lives. They can also be leveraged in marketing situations to manipulate people's decisions.

EXAMPLE

- **Availability Heuristic:** Making decisions based upon information that is easily available.

- **Anchoring Heuristic:** Making decisions based upon a subjective anchoring point that influences all subsequent thinking on a topic.

- **Affect Heuristic:** Making decisions based on emotions, moods, and "gut feelings" rather than logic.

Four Uses of Heuristics Arthur Smith,1973 **Hyper-Heuristics: Theory and Applications** Nelishia Pillay,Rong Qu,2018-10-05 This introduction to the field of hyper heuristics presents the required foundations and tools and illustrates some of their applications The authors organized the 13 chapters into three parts The first hyper heuristic fundamentals and theory provides an overview of selection constructive selection perturbative generation constructive and generation perturbative hyper heuristics and then a formal definition of hyper heuristics The chapters in the second part of the book examine applications of hyper heuristics in vehicle routing nurse rostering packing and examination timetabling The third part of the book presents advanced topics and then a summary of the field and future research directions Finally the appendices offer details of the HyFlex framework and the EvoHyp toolkit and then the definition problem model and constraints for the most tested combinatorial optimization problems The book will be of value to graduate students researchers and practitioners Applications of Modern Heuristic Optimization Methods in Power and Energy Systems Kwang Y. Lee,Zita A. Vale,2020-04-14 Reviews state of the art technologies in modern heuristic optimization techniques and presents case studies showing how they have been applied in complex power and energy systems problems Written by a team of international experts this book describes the use of metaheuristic applications in the analysis and design of electric power systems This includes a discussion of optimum energy and commitment of generation nonrenewable renewable and load resources during day to day operations and control activities in regulated and competitive market structures along with transmission and distribution systems Applications of Modern Heuristic Optimization Methods in Power and Energy Systems begins with an introduction and overview of applications in power and energy systems before moving on to planning and operation control and distribution Further chapters cover the integration of renewable energy and the smart grid and electricity markets The book finishes with final conclusions drawn by the editors Applications of Modern Heuristic Optimization Methods in Power and Energy Systems Explains the application of differential evolution in electric power systems active power multi objective optimal dispatch Includes studies of optimization and stability in load frequency control in modern power systems Describes optimal compliance of reactive power requirements in near shore wind power plants Features contributions from noted experts in the field Ideal for power and energy systems designers planners operators and consultants Applications of Modern Heuristic Optimization Methods in Power and Energy Systems will also benefit engineers software developers researchers academics and students *The Decision Usefulness of Additional Fair Value Disclosures* Theresa Herrmann,2018-12-28 Conducting an experiment Theresa Herrmann investigates why nonprofessional investors fail to incorporate disclosures on fair value estimates into their investment decision and what causes this exclusion Differentiating between different types of disclosures and the development of the fair value gain vs loss the results indicate that with a fair value gain none of the disclosure information increases decision usefulness irrespective of the presentation

format When a fair value loss occurs fair value disclosures presented in a salient presentation format decrease decision usefulness Thus investors have varying information needs that are strongly linked to the development of a firm s key asset
