Fragile Dominion: Complexity and the Commons Simon A Levin, 2000

How the science of complexity can help save the natural world from collapse
Berkes, 2023-02-14 Providing a concise overview of resilience in the context of unprecedented global environmental change this Advanced Introduction addresses the intertwined systems of people and nature It explores ecological resilience incorporating social science approaches and concepts and identifies and discusses innovative ways of planning for an increasingly unpredictable future

Managed Annihilation Dean Bavington, 2011-01-01 The commercial cod fishery in Newfoundland and Labrador was once the most successful fishery in the world When it collapsed in 1992 causing the largest single day layoff in Canadian history and irrevocable ecological damage fishermen scholars and scientists pointed to failures in management such as uncontrolled harvesting as likely culprits Examining the history of commercial cod fisheries in the region from the mid nineteenth century Managed Annihilation makes the case that the very idea of natural resource management caused the death of the cod The collapse occurred when the fisheries were ostensibly managed by the state and the fishery has still not recovered nearly two decades later Although the collapse raised doubts among policy makers about their ability to understand predict and control nature their ultimate goal of control through management has not wavered it has simply been transferred onto new targets

Human Ecology Gerald G Marten, 2010-09-23 The scope and clarity of this book make it accessible and informative to a wide readership Its messages should be an essential component of the education for all students from secondary school to university It provides a clear and comprehensible account of concepts that can be applied in our individual and collective lives to pursue the promising and secure future to which we all aspire From the Foreword by Maurice Strong Chairman of the Earth Council and former Secretary General of the United Nations Conference on Environment and Development Earth Summit The most important questions of the future will turn on the relationship between human societies and the natural ecosystems on which we all in the end depend The interactions and interdependencies of the social and natural worlds are the focus of growing attention from a wide range of environmental social and life sciences Understanding them is critical to achieving the balance involved in sustainable development Human Ecology Basic Concepts for Sustainable Development presents an extremely clear and accessible account of this complex range of issues and of the concepts and tools required to understand and tackle them Extensively supported by graphics and detailed examples this book makes an excellent introduction for students at all levels and for general readers wanting to know why and how to respond to the dilemmas we face

Maskin, 2014-04-10 This book honours Partha Dasgupta and the field he helped establish environment and development economics It concerns the relationship between social systems to include families local communities national economies and the world as a whole and natural systems critical ecosystems forests water resources

mineral deposits pollution fisheries and the Earth's climate Above all it concerns the poverty environment nexus the complex pathways by which people become or remain poor and resources become or remain overexploited With contributions by some of the world's leading economists including five recipients of the Nobel Prize in Economics in addition to scholars based in developing countries this volume offers a unique perspective on the environmental issues that matter most to developing countries

Community-based Collaboration E. Franklin Dukes, Karen Firehock, Juliana Birkhoff, 2011 The debate over the value of community based environmental collaboration is one that dominates current discussions of the management of public lands and other resources In *Community Based Collaboration Bridging Socio Ecological Research and Practice* the volume's contributors offer an in depth interdisciplinary exploration of what attracts people to this collaborative mode The authors address the new institutional roles adopted by community based collaborators and their interaction with existing governance institutions in order to achieve more holistic solutions to complex environmental challenges Contributors Heidi L Ballard University of California Davis Juliana E Birkhoff RESOLVE Charles Curtin Antioch University Cecilia Danks University of Vermont E Franklin Dukes University of Virginia and George Mason University Mar a Fernandez Gim nez Colorado State University Karen E Firehock University of Virginia Melanie Hughes McDermott Rutgers University William D Leach California State University Sacramento Margaret Ann Moote private consultant Susan L Senecah State University of New York College of Environmental Science and Forestry Gregg B Walker Oregon State University

Beyond Collapse Ronald K. Fausch, 2016 This book interprets how ancient civilizations responded to various stresses including environmental change warfare and the fragmentation of political institutions It focuses on what happened during and after the decline of once powerful regimes and posits that they experienced social resilience and transformation instead of collapse

Governing for transformation towards sustainable small-scale fisheries Food and Agriculture Organization of the United Nations, Berkes, F. (ed.), Franz, N. (ed.), 2025-02-21 This volume provides a human centered perspective building on the expanding horizon from biological and economic management to interdisciplinary and transdisciplinary aquatic resources governance It was prepared in celebration of the tenth anniversary of the Voluntary Guidelines for Securing Sustainable Small Scale Fisheries in the Context of Food Security and Poverty Eradication SSF Guidelines It also provides an update of Berkes book *Coasts for People Interdisciplinary Approaches to Coastal and Marine Resource Management* Routledge 2015 The original chapters of the book served as the first draft of seven of the chapters all of them rewritten with multiple authors total of 20 co authors and with an explicit focus on small scale fisheries through the lens of the SSF Guidelines Over the years aquatic resources governance has evolved For example the term resource which carried a sense of free goods and commodification of nature shifted in meaning to include biodiversity and ecosystem services The term management changed to include participation complexity and uncertainty The volume focuses on several subject areas as the key elements of an interdisciplinary science of aquatic governance These include holism and ecosystems view Chapter 2 coupled humans and environment systems Chapter

3 fishers knowledge Chapter 4 commons dilemmas Chapter 5 co management Chapter 6 livelihoods and sustainability Chapter 7 fishery systems resilience Chapter 8 and ecosystem and human rights based management Chapter 9 These interdisciplinary social science oriented approaches have shaped recent thinking about small scale fisheries helping empower fishers and fishworkers towards a more inclusive equitable sustainable and resilient subsector They also help meet Sustainable Development Goals particularly SDG1 No Poverty and SDG2 Zero Hunger consistent with the emphasis of SSF Guidelines on poverty eradication and food security The intended audience for the volume is broad based and includes fisheries and aquatic management practitioners and policymakers scientists and educators It is an invitation to a new generation of resource managers to be aware of how approaches and concepts have evolved over time to embrace the challenge of interdisciplinarity and complexity to advance the transformation towards sustainable small scale fisheries

How Sonata Forms Yoel Greenberg, 2022 How Sonata Forms proposes a new bottom up conceptualization of the history of the sonata as an aggregation of distinct elements found throughout the eighteenth century

Water Governance in the Face of Global Change Claudia Pahl-Wostl, 2015-09-04 This book offers the first comprehensive treatment of multi level water governance developing a conceptual and analytical framework that captures the complexity of real water governance systems while also introducing different approaches to comparative analysis Applications illustrate how the ostensibly conflicting goals of deriving general principles and of taking context specific factors into account can be reconciled Specific emphasis is given to governance reform adaptive and transformative capacity and multi level societal learning The sustainable management of global water resources is one of the most pressing environmental challenges of the

21st century Many problems and barriers to improvement can be attributed to failures in governance rather than the resource base itself At the same time our understanding of complex water governance systems largely remains limited and fragmented The book offers an invaluable resource for all researchers working on water governance topics and for practitioners dealing with water governance challenges alike

Integrating Emerging Technologies into Marine Megafauna Conservation Management Peter H. Dutton, Mark Meekan, Lars Bejder, Lisa Marie Komoroske, 2020-01-16

The Economics of Non-Convex Ecosystems Partha Dasgupta, Karl-Göran Mäler, 2006-04-11 Economists often assume that ecosystem and population dynamics are subject to convex even linear processes But research by ecosystem and population ecologists suggests that such processes are very often non convex for example a possible flip of the Gulf Stream due to fresh water intrusion from melting glaciers This has dramatic implications for environmental and resource economics since mistakes in management could prove more costly than imagined

Global Challenges in Integrated Coastal Zone Management Einar Dahl, Josianne Støttrup, 2012-12-18 Growing pressure from increasingly diverse human activities coupled with climate change impacts threaten the functional integrity of coastal ecosystems around the globe A multi disciplinary approach towards understanding drivers pressures and impacts in the coastal zone requires effective integration of data and information in policy and management combining expertise from nature and social science to reach a balanced and sustainable development of the coastal zone This important book comprises the proceedings of The International Symposium on Integrated Coastal Zone Management which took place in Arendal Norway between 3 7 July 2011 The main objective of the Symposium was to present current knowledge and to address issues on advice and management related to the coastal zone The major themes of papers included in this book are Coastal habitats and ecosystem services Adaptation mitigation to change in coastal systems Coastal governance Linking science and management Comprising a huge wealth of information this timely and well edited volume is essential reading for all those involved in coastal zone management around the globe All libraries in research establishments and universities where marine aquatic and environmental sciences and fisheries and aquatic sciences are studied and taught will need copies of this important volume on their shelves

Sustainable Consumption Dale Southerton, Alistair Ulph, 2014 If global society is to address the many environmental and other sustainability challenges that confront us in the twenty first century such as climate change and water resources it will be necessary to make significant changes in our patterns of consumption production and distribution There is a growing

realization that while changes in production and distribution are formidable the proposed solutions may not succeed unless it is possible to persuade individuals and households to change their patterns of consumption to make them more sustainable. However, there are significant differences in how key disciplines such as psychology, neuroscience, economics, politics, sociology, anthropology, and history conceptualise consumption, empirically test their theoretical predictions, and use these to inform policy makers across the private, public, and third sectors on how to make consumption more sustainable. This book contains chapters from world-leading experts in these different disciplines that seek to explain the perspectives on sustainable consumption of their disciplines, suggest how these might be further enriched by taking on board some of the findings from other disciplines, and consider what this implies for new policies to address the key sustainability challenges outlined above. The book is dedicated to Professor Sir Partha Dasgupta, one of the world's leading economists who has worked across a range of topics including environmental and resource economics and development economics, and throughout his career has sought to incorporate into his economic thinking ideas from a range of other disciplines.

Ecological Networks Mercedes Pascual, Jennifer A. Dunne, 2006. Food webs are one of the most useful and challenging objects of study in ecology. These networks of predator-prey interactions conjured in Darwin's image of a tangled bank provide a paradigmatic example of complex adaptive systems. This book is based on a February 2004 Santa Fe Institute workshop. Its authors treat the ecology of predator-prey interactions, food web theory, structure, and dynamics. The book explores the boundaries of what is known of the relationship between structure and dynamics in ecological networks and will define directions for future developments in this field.

Business Strategies for Sustainability Helen Borland, Adam Lindgreen, Francois Maon, Véronique Ambrosini, Beatriz Palacios Florencio, Joelle Vanhamme, 2018-10-03. Business Strategies for Sustainability brings together important research contributions that demonstrate different approaches to business strategies for sustainability. Many corporate initiatives toward what firms perceive to be sustainability are simply efficiency drives or competitive moves falling far short of actual strategies for ecological sustainability. To suggest true ecological sustainability strategies, this new research anthology adopts an interdisciplinary or transdisciplinary approach to discern what business strategies might look like if they were underpinned by environmental and ecological science. The 23 chapters in this anthology reflect five main topic sections: a) delineating sustainability challenges and visions; b) contradiction, integration, and transformation of business and sustainability logics; c) innovating and developing strategic capabilities for sustainability; d) assessing and valuing sustainability; and e) toward multi-level engagement and collaboration.

Global Environmental Harm Rob White, 2013-01-11.
