Foundations Of Perceptual Theory Advances In Psychology Volume 99:

Psychophysics Beyond Sensation Christian Kaernbach, Erich Schröger, Hermann Müller, Hermann Müller, Erich Schröger, 2004-05-20 This volume presents a series of studies that expand laws invariants and principles of psychophysics beyond its classical domain of sensation This book's goal is to demonstrate the extent of the domain of psychophysics ranging from sensory processes through sensory memory and short term memory issues to the interaction between sensation and action The dynamics and timing of human performance are a further important issue within this extended framework of psychophysics Given the similarity of the various cortical areas in terms of their neuroanatomical structure it is an important question whether this similarity is paralleled by a similarity of processes These issues are addressed by the contributions in the present volume using state of the art research methods in behavioral research psychophysiology and mathematical modeling The book is divided into four sections Part I presents contributions concerning the classical domain of psychophysical judgment The next two parts are concerned with elementary and higher order processes and the concluding section deals with psychophysical models The sections are introduced by guest editorials contributed by independent authors These editorials present the authors personal view on the respective section providing an integrated account of the various contributions or highlighting their focus of interest among them While also voicing their own and sometimes different point of view they contribute to the process of discussion that makes science so exciting This volume should be of great interest to advanced students in neuroscience cognitive science psychology neuropsychology and related areas who seek to evaluate the range and power of psychological work today Established scientists in those fields will also appreciate the variety of issues addressed within the same methodological framework and their multiple interconnections and stimulating cross talk

Embodiment, Ego-Space, and Action Roberta L. Klatzky, Brian MacWhinney, Marlene Behrmann, 2008-06-20 The majority of research on human perception and action examines sensors and effectors in relative isolation What is less often considered in these research domains is that humans interact with a perceived world in which they themselves are part of the perceptual representation as are the positions and actions potential or ongoing of other actors

Computational, Geometric, and Process Perspectives on Facial Cognition Michael J. Wenger, James T. Townsend, 2005-04-11 Within the last three decades interest in the psychological experience of human faces has drawn together cognitive science researchers from diverse backgrounds Computer scientists talk to neural scientists who draw on the work of mathematicians who explicitly influence those conducting behavioral experiments The chapters in this volume illustrate the breadth of the research on facial perception and memory with the emphasis being on mathematical and computational approaches In pulling together these chapters the editors sought to do much more than illustrate breadth They endeavored as well to illustrate the synergies and tensions that inevitably result from adopting a broad view one consistent with the emerging discipline of cognitive science

The Perception and Cognition of Visual Space Paul Linton, 2017-08-28 This book explores a central question in the study of depth perception does the visual system rely upon objective knowledge and subjective meaning to specify visual depth Linton advances an alternative interpretation to the generally accepted affirmative answer according to which many of the apparent contributions of knowledge and meaning to depth perception are better understood as contributions to our post perceptual cognition of depth In order to defend this position a new account of visual cognition is required as well as a better understanding of the optical and physiological cues to depth This book will appeal to students and researchers in psychology vision science and philosophy as well as technologists and content creators working in virtual and augmented reality

Cognitive and Computational Aspects of Face Recognition Tim Valentine, 2002-09-26 Just how and why we find some faces memorable but others impossible to recognize is a complex and important question with many practical applications This edited collection brings together a multi disciplinary team of researchers to compare and contrast their findings from psychology computer science mathematics and neural network research to present a state of the art description of the latest and best of their results in this field With an international line up of key researches this book is an

resource for all researchers and advanced students of this topic in each discipline *Human Factor Security and Safety* Cheng Wang, 2025-06-04 As we navigate an increasingly complex digital landscape ensuring human factor security and safety has never been more critical This groundbreaking book offers an innovative perspective by leveraging behavioral computing to address challenges in human factor security across diverse scenarios Through comprehensive coverage the book introduces advanced methods like behavioral modeling and simulation to analyze multimodal behavioral data spanning structure language and vision These approaches not only deepen our understanding of human behavior but also enable robust solutions to modern security concerns presenting a new paradigm for safeguarding systems in dynamic environments Ideal for researchers professionals and advanced students in security technologies and behavioral sciences this work bridges theoretical frameworks with practical applications Key topics include the evolution of behavioral paradigms the role of behavioral structures in simulation and real world applications in cyberfinance and human factor engineering *Patterns of Evidence* Christopher S. Campbell, 2000 **Rule and Exemplar Representation in Category Learning** Michael A. Erickson, 1999 **Intergroup Contact Theory** Loris Vezzali, Sofia Stathi, 2016-12-08 Intergroup contact theory has been one of the most influential theories in social psychology since it was first formulated by Gordon Allport in 1954 This volume highlights via a critical lens the most notable recent developments in the field demonstrating its vitality and its capacity for reinvention and integration with a variety of seemingly distinct research areas In the last two decades the research focus has been on the variables that explain why contact improves intergroup attitudes and when the contact prejudice relationship is stronger Current research highlights that contact is not a panacea for prejudice but it can represent a useful tool that can contribute to the improvement of intergroup relations The book includes coverage of a number of previously under researched fields which extend the full potential of contact theory within the personality acculturation and developmental domains The chapters also examine the methodological advances in the field and the applied implications The book offers a rich picture of the state of the field and future directions for research that will be invaluable to students and scholars working in social psychology and related disciplines It aims to provide fertile ground for the development of new exciting and dynamic research ideas in intergroup relations *Social Psychology* Arie W. Kruglanski, Edward Tory Higgins, 2003 First Published in 2003 Routledge is an imprint of Taylor Francis an informa company **Connections Between Sexuality and Aggression** Dolf Zillmann, 2021-02-25 This is the only available comprehensive monograph on interrelations and interdependencies between agonistic and sexual behaviors Integrating theory and research from biology anthropology neurophysiology endocrinology psychophysiology and psychology this book focuses on the mechanisms that govern the mutual influences between sexuality and aggression in behavior sequences and especially in admixtures of aggressive sexual behaviors This book places human agonistic and sexual behaviors into an evolutionary context It offers a Weltbild of human aggressive sexual behaviors by tracing their biological and developmental origins and examines the plasticity and

manipulability of connections between agonistic and sexual behaviors Strategies for the maximization of sexual pleasures are elaborated and intervention treatments aiming at the control of violent behaviors are considered Coercive sexuality is given special attention Prevalent motive ascriptions to rape are called into question and the motivation that dominates rape is reinterpreted in the context of pleasure maximization This second edition brings the coverage of pertinent research up to date It advances the exploration of aggressive sexual behaviors by further integrating the research contributions from various disciplines and by refining and unifying theory capable of explaining the behavioral phenomena under consideration COPY FOR ZILLMANN MAILER Zillmann examines issues such as sexual access through aggression the involvement of agonistic behavior within sexuality sex aggression fusion the consequences of anticipatory imagination concerning sexuality and aspects of libido loss due to excitatory habituation This book also traces connection between sexuality and aggression in nonhuman species especially in nonhuman primates subjects human behavior to comparative and evolutionary analysis examines connectedness in neurological and endocrinological terms details both central and autonomic commonalities between sexual and aggressive behaviors outlines sexual dimorphism and chromosomal endocrine aberrations pays special attention to adrenal commonalities in sexual and aggressive behaviors and the fusion of these behaviors and examines aggressive sexual connectedness in the analysis of motivation and emotion Zillmann finally proposes new explanations for the numerous documented associations between sexuality and aggression These proposals combine biological neuroendocrine autonomic and cognitive aspects of aggressive and sexual behaviors A trichotomy of excitatory interdependencies is developed for fight flight and coition In the nomenclature of emotion this trichotomy concerns the interdependencies between aggressiveness fear and sexual impulsions A considerable amount of research evidence is aggregated in support of these interdependencies The author ultimately examines the exploitation of the existing connections between sexual and aggressive behaviors especially the exploitation that serves the enhancement of sexual pleasure In this context he arrives at novel and perhaps distressing characterizations of sexual coercion However he also explores sexual boredom and discusses remedies in the framework of his theorizing Last but not least sexual aggression and sexual and aggressive behaviors independently are placed into an evolutionary context Recognition and acknowledgment of the archaic nature of many aspects of sexual and aggressive behaviors in contrast to the comparatively vernal development of behavior guiding contemplation leads him to a unique and provocative proposal of the function of aggression in the realm of sexuality

Motivational Science Edward Tory Higgins, Arie W. Kruglanski, 2000 A current collection of articles that define the field of motivational science *The Psychology of Control and Aging (Psychology Revivals)* Margret M. Baltes, Paul B. Baltes, 2014-08-01 Originally published in 1986 the central topic of this book is the analysis and application of control related beliefs and behaviours for theory and practice in the psychology of aging The volume was written for two specific interrelated purposes aimed at cross fertilization between the psychology of control and the field of gerontology The first purpose was to

summarise available research and theory on the psychology of control for researchers and professionals interested in gerontology at the time The second was to enrich the field of the psychology of control
