essential texts selections from works widely regarded as central to the development of the field which lay the basis of further study for any serious student of education Part II looks at multidisciplinary directions of current foundations of education scholarship An introductory essay by the editors and discussion questions at the conclusion of the text further highlight the selections continued importance and application to today's most pressing educational issues By addressing the past present and future of social foundations this volume contends skillfully with ever shifting education policies and school demographics

**Moral Foundations of Philosophy of Mind** Joel Backström, Hannes Nykänen, Niklas Toivakainen, Thomas Wallgren, 2019-09-05 This volume brings together a collection of essays that explore in a new way how unacknowledged moral concerns are integral to debates in the philosophy of mind The radical suggestion of the book is that we can make sense of the internal dynamics and cultural significance of these debates only when we understand the moral forces that shape them Drawing inspiration from a variety of traditions including Wittgenstein Lacan phenomenology and analytic philosophy the authors address a wide range of topics including the mind body problem the problem of other minds subjectivity and objectivity the debates on mindreading naturalism reductive physicalism representationalism and the E turn Dennett's heterophenomenology McDowell's neo Kantianism Wittgenstein's private language considerations and his notion of an attitude towards a soul repression love conscience the difficulties of self understanding and the methods and aims of philosophy Through a combination of detailed immanent criticism and bold constructive work the authors move the discussion to a new level beyond humanistic or conservative critiques of naturalism and scientism

**Foundations and Practice of Research** Andrew Basden, 2019-10-11 Many of the issues on which meaningful research is founded are seldom discussed for example the role of everyday experience diversity and coherence of meaning in the world the meaningfulness and wider mandate of research the very nature and validity of theoretical thought and the deep presuppositions of philosophy and how they undermine the success of research Such questions are material to the philosophies that guide research thinking in all fields and since they cannot be satisfactorily addressed in a piecemeal fashion this book employs the radically different philosophy of Herman Dooyeweerd to consider them together Parts I and II discuss these issues theoretically and philosophically while Part III discusses them practically specifically the adventures that researchers across the world have had using Dooyeweerd's philosophy Foundations and Practice of Research assembles a wide range of experiences of using Dooyeweerd's philosophy in research in the fields of mathematics the natural sciences the social sciences design sciences and the humanities Case studies demonstrate how Dooyeweerd's philosophy has been found fruitful in most stages of research and the philosophical discussion backs this up This book challenges researchers to join the adventures including suggestions of potential research that could be carried out as well as questions still left unanswered

Foundations of Biophilosophy Martin Mahner, Mario Bunge, 1997-05-20 Over the past three decades the philosophy of biology has emerged from the shadow of the philosophy of physics to become a respectable and thriving philosophical subdiscipline In their book

the authors take a fresh look at the life sciences and their philosophy from a strictly realist and emergentist naturalist perspective They outline a unified and science oriented philosophical framework that enables them to clarify many foundational and philosophical issues in biology Thus this book should be of interest to both life scientists and philosophers and is suitable as a textbook for courses at the advanced levels as well as for independent study *Foundations of Psychiatry* [!] William Alanson White,1921 *Theoretical Knowledge* Viacheslav Semenovitch Stepin,2005-07-12 He shows direct and inverse links between foundations of science and new theories and empirical facts evolved from those how among many potentially possible histories of science a culture selects just those directions which become a real history of science The author analyses mechanisms of the generation of scientific theories and shows that those are changed in the process of historical development of science He displays three historical types of scientific rationality classical non classical and post non classical which appears in modern science and shows features of their coexistence and interplay It is shown that along with the emerging of post non classical rationality science increases the sphere of its worldview applications Science begins to correlate not only with the basic values of technogenic civilization but also with some values and patterns of traditional cultures Educational Foundations ,1905 **Foundations of the Philosophy of Value** Harold Osborne,1980

**The Mathematics of Novelty** Sam Gillespie,2008 Sam Gillespie s *The Mathematics of Novelty* presents a new account of Alain Badiou and Gilles Deleuze identifying conceptual impasses in their philosophical projects and proposing a way through by recourse to the psychoanalysis of Jacques Lacan **Philosophical Foundations of the Social Sciences** Harold Kincaid,1996 This 1996 book argues that behind the diverse methods of the natural sciences lies a common core of scientific rationality **The Enlightenment and the Intellectual Foundations of Modern Culture** Louis Dupre,2008-10-01 The prestige of the Enlightenment has declined in recent years Many consider its thinking abstract its art and poetry uninspiring and the assertion that it introduced a new age of freedom and progress after centuries of darkness and superstition presumptuous In this book an eminent scholar of modern culture shows that the Enlightenment was a more complex phenomenon than most of its detractors and advocates assume It includes rationalist as well as antirationalist tendencies a critique of traditional morality and religion as well as an attempt to establish them on new foundations even the beginning of a moral renewal and a spiritual revival The Enlightenment s critique of tradition was a necessary consequence of the fundamental modern principle that we humans are solely responsible for the course of history Hence we can accept no belief no authority no institutions that are not in some way justified This foundation for better or for worse determined the course of the following centuries Despite contemporary reactions against it the Enlightenment continues to shape our own time and still distinguishes Western culture from any other Foundations of a Sociology of Canon Law Judith Hahn,2022-08-08 This Open Access book investigates the legal reality of the church through a sociological lens and from the perspective of canon

law studies the discipline which researches the law and the legal structure of the Catholic Church It introduces readers from various backgrounds to the sociology of canon law which is both a legal and a theological field of study and is the first step towards introducing a new subdiscipline of the sociology of canon law As a theoretical approach to mapping out this field it asks what theology and canon law may learn from sociology it discusses the understanding of law in religious contexts studies the preconditions of legal validity and effectiveness and based on these findings it asks in what sense it is possible to speak of canon law By studying a religious order as its struggles to find a balance between continuity and change this book also contributes to the debates on religious law in modernity and the challenges it faces from secular states and plural societies This book is of interest to researchers and students of the sociology of law legal studies law and religion the sociology of religion theology and religious studies This is an open access book
