Bauer,Ralf Steinbrüggen,2000 The final quarter of the 20th century has seen the establishment of a global computational infrastructure This and the advent of programming languages such as Java supporting mobile distributed computing has posed a significant challenge to computer sciences The infrastructure can support commerce medicine and government but only if communications and computing can be secured against catastrophic failure and malicious interference **Foundations of Component-Based Systems** Gary T. Leavens,Murali Sitaraman,2000-03-28 This collection of articles by well known experts was originally published in 2000 and is intended for researchers in computer science practitioners of formal methods and computer programmers working in safety critical applications or in the technology of component based systems The work brings together several elements of this area that were fast becoming the focus of much research and practice in computing The introduction by Clemens Szyperski gives a snapshot of research in the field About half the articles deal with theoretical frameworks models and systems of notation the rest of the book concentrates on case studies by researchers who have built prototype systems and present findings on architectures verification The emphasis is on advances in the technological infrastructure of component based systems how to design and specify reusable components and how to reason about verify and validate systems from components Thus the book shows how theory might move into practice *Foundations of Programming* Mike James,1989
