Fractals for the Classroom: Strategic Activities Volume Two Heinz-Otto Peitgen, Hartmut Jürgens, Dietmar Saupe, 1992-03-26 This second volume of strategic classroom activities is designed to develop through a hands-on approach a basic mathematical understanding and appreciation of fractals. The concepts presented on fractals include self-similarity, the chaos game, and complexity as it relates to fractal dimension. These strategic activities have been developed from a sound instructional base stressing the connections to the contemporary curriculum as recommended in the National Council of Teachers of Mathematics Curriculum and Evaluation Standards for School Mathematics. Where appropriate, the activities take advantage of the technological power of the graphics calculator. These activities make excellent extensions to many of the topics that are already taught in the current curriculum. Together, they can be used as a complete unit or as the beginning for a semester course on fractals. The slide package that accompanies this first volume includes some of the highest quality fractal images available anywhere. Students and educators alike will find these materials most stimulating.

Fractal Physiology James B Bassingthwaight, Larry S Liebovitch, Bruce J West, 2013-05-27 I know that most men including those at ease with the problems of the greatest complexity can seldom accept even the simplest and most obvious truth if it be such as would oblige them to admit the falsity of conclusions which they have delighted in explaining to colleagues which they have proudly taught to others and which they have woven thread by thread into the fabric of their lives Joseph Ford quoting Tolstoy Gleick 1987 We are used to thinking that natural objects have a certain form and that this form is determined by a characteristic scale If we magnify the object beyond this scale no new features are revealed To correctly measure the properties of the object such as length area or volume we measure it at a resolution finer than the characteristic scale of the object We expect that the value we measure has a unique value for the object This simple idea is the basis of the calculus Euclidean geometry and the theory of measurement However Mandelbrot 1977 1983 brought to the world's attention that many natural objects simply do not have this preconceived form Many of the structures in space and processes in time of living things have a very different form Living things have structures in space and fluctuations in time that cannot be characterized by one spatial or temporal scale They extend over many spatial or temporal scales

Energizing Water Jochen Schwuchow,John Wilkes,Iain

Trousdell,2013-04-16 The poor quality of water as well as its restricted supply and availability is one of the biggest challenges of our time with presently two fifth s of the world s population unable to find adequate fresh water for essential usage Over 40 years research has been carried out on the positive effects that rhythms and specific water flow has on water s capacity to support life Energizing Water presents this cutting edge research to the general and professional reader at a time when interest in finding solutions to water s huge worldwide problems is growing rapidly Three aspects determine water quality its chemical constituents including its oxygen levels its organic aspects with the danger of contamination by effluent pathogens and algae and its energetic nature The latter facet has been recognized from time immemorial by traditional societies who have developed their own sciences in relation to water quality using terms such as prana and chi for energy Now through the introduction of quantum physics into the life sciences modern science is beginning to accept this concept measuring energy as light emission Research into energetic water quality and particularly into the creation of moulded surfaces that support biological purification of the chemical and organic elements as well as enlivening the energetic attributes goes back to George Adams and John Wilkes pioneering work in the 1960s The invention of Flowform technology in 1970 carried this research further providing the world with one of the first modern day biomimicry eco technologies This creative technology applies nature s best methods to produce extraordinary results and this book outlines the background story on research and application of the Flowform method today JOHN WILKES originated the Flowform Method in 1970 following periods of work with George Adams and Theodor Schwenk After further research project work led to installations in many countries In 2002 an Institute was built at Emerson College providing more adequate space for research into the qualitative effects of rhythmic movement on water JOCHEN SCHWUCHOW is a freelance research and
