Aldinger,2008-11-21 Several ceramic parts have already proven their suitability for serial application in automobile engines in very impressive ways especially in Japan the USA and in Germany However there is still a lack of economical quality assurance concepts Recently a new generation of ceramic components for the use in energy transportation and environment systems has been developed The efforts are more and more system oriented in this field The only possibility to manage this complex issue in the future will be interdisciplinary cooperation Chemists physicists material scientists process engineers mechanical engineers and engine manufacturers will have to cooperate in a more intensive way than ever before The R D activities are still concentrating on gas turbines and reciprocating engines but also on brakes bearings fuel cells batteries
