biology is one of the most exciting and fast growing fields today In part this is so because the subject matter deals with the innately fascinating biological events changes in form structure and function of the organism The other reason for much of the excitement in developmental biology is that the field has truly become the unifying melting pot of biology and provides a framework that integrates anatomy physiology genetics biochemistry and cellular and molecular biology as well as evolutionary biology No longer is the study of embryonic development merely embryology In fact development biology has produced important paradigms for both basic and clinical biomedical sciences Though modern developmental biology has its

roots in experimental embryology and the even more classical chemical embryology the recent explosive and remarkable advances in developmental biology are critically linked to the advent of the cellular and molecular biology revolution The impressive arsenal of experimental and analytical tools derived from cell and molecular biology which promise to continue to expand together with the exponentially developing sophistication in functional imaging and information technologies guarantee that the study of the developing embryo will contribute one of the most captivating areas of biological research in the next millennium

Guide to Techniques in Mouse Development Paul M. Wassarman, Philippe M. Soriano, 2010 17 years have passed since the first edition of the Guide to Techniques in Mouse Development volume 225 was published During this time development of technology used to investigate mouse development has not stood still with enormous advances occurring in genomics transgenic and ES cell methodology and reprogramming culminating with development of iPS cells At both the cellular and molecular levels a great many technological advances have been made that permit investigators to probe ever more deeply into all aspects of mouse development This completely new version of the Guide has been split into two parts both highlighting the technological advances used to study mouse development
