The Oxford Handbook of Palliative Care covers all aspects of palliative care in a concise and succinct format suited to busy professionals who need to access key information in their daily care of patients. This practical guide covers briefly the historical and epidemiological background of palliative care and the growth of palliative medicine as a specialty before dealing with major physical psychological and spiritual and symptom management issues from diagnosis to bereavement care. In addition to the adult chapters the handbook includes an extensive paediatric section. The oncology section outlines the treatment regimes of the common cancers and details the chemotherapeutic agents including their side effects. The Oxford Handbook of Palliative Care will prove invaluable for specialist doctors nurses and professionals allied to medicine who are involved in the day to day care of adults children and families with palliative care needs.

*Bone Metastases* Robert D. Rubens, Ignac Fogelman, 2012-12-06. Bone Metastases brings together the many recent developments that are gradually improving the prospects for patients with secondary involvement of the skeleton in a primary cancer elsewhere. The morbidity from bone metastases is extensive and the palliative and supportive treatment that sufferers require for many months or even years constitutes a major health problem. A multidisciplinary approach is essential since a variety of specialists are involved: radiation and medical oncologists, general and orthopaedic surgeons, general physicians, radiologists and nuclear medicine physicians, symptom control and terminal care specialists. The book's editors themselves, authorities in the fields of oncology and bone disease respectively, have brought together experts from all these disciplines to provide comprehensive coverage of metastatic bone disease. They cover the biology and pathophysiology, hypercalcaemia, imaging, assessment of response to treatment, types of treatment: systemic radiotherapy, surgery and symptomatic and supportive care. Particularly new approaches included are magnetic resonance imaging, the assessment of skeletal response and isotope therapy.
