Guidebook For Attracting Paratransit Patrons To Fixed Route Services

Guidebook For Attracting Paratransit Patrons To Fixed Route Services:

Guidebook for Attracting Paratransit Patrons to Fixed-route Services John N. Balog, National Research Council (U.S.). Transportation Research Board, 1997 Paratransit services are more expensive to provide on a per trip basis than fixed route transit so operating efficiencies could be achieved by attracting some paratransit riders to fixed route The Guidebook identifies the characteristics and preferences of four distinct market segments people with disabilities who use fixed route transit people with disabilities who use paratransit others who currently use paratransit and people with disabilities who normally do not use transit The Guidebook also provides step by step procedures for estimating demand locating bus stops training drivers providing travel training for patrons marketing services and evaluating successes **Guidebook for Measuring, Assessing, and Improving Performance of Demand-response Transportation** KFH Group, Transit Cooperative Research Program, 2008 TRB s Transit Cooperative Research Program TCRP Report 124 Guidebook for Measuring Assessing and Improving Performance of Demand Response Transportation is designed to help demand response transportation DRT systems to measure assess and improve their performance The report focuses on DRT in urban areas

Policies and Practices for Effectively and Efficiently Meeting ADA Paratransit Demand David Chia, Transit Cooperative Research Program, 2008 TRB s Transit Cooperative Research Program TCRP Synthesis 74 Policies and Practices for Effectively and Efficiently Meeting ADA Paratransit Demand highlights policies and practices that transit agencies may be able to apply to their own paratransit services often without the need to devote significant funds personnel or other resources The report also examines certain practices and technologies that are still under development or have not undergone extensive testing Publisher s description *Computer-Aided Scheduling of Public Transport* Stefan Voß, Joachim R. Daduna, 2001-07-31 This volume gives an overview on new theoretical approaches on computer aided methods for strategic and operational planning in public transport The papers of this volume cover the most important steps of the complete process of planning and operational control in public transport and public mass transit Readers of this book obtain detailed information on current developments in vehicle and crew scheduling and in solving such problems in practice Interesting results in scheduling theory are shown using procedures for solving combinatorial problems with more complex structures Furthermore experiences in the application of specific software tools are presented TOC Vehicle and Crew Scheduling Methodical Advances Vehicle and Crew Scheduling Practical Issues Advanced Transit Service and Vehicle Routing Monitoring and Control Strategic Decision Problems Appendices **The Future of Disability in America** Institute of Medicine, Board on Health Sciences Policy, Committee on Disability in America, 2007-10-24 The future of disability in America will depend on how well the U S prepares for and manages the demographic fiscal and technological developments that will unfold during the next two to three decades Building upon two prior studies from the Institute of Medicine the 1991 Institute of Medicine s report Disability in America and the 1997 report Enabling America The Future of Disability in America

examines both progress and concerns about continuing barriers that limit the independence productivity and participation in community life of people with disabilities This book offers a comprehensive look at a wide range of issues including the prevalence of disability across the lifespan disability trends the role of assistive technology barriers posed by health care and other facilities with inaccessible buildings equipment and information formats the needs of young people moving from pediatric to adult health care and of adults experiencing premature aging and secondary health problems selected issues in health care financing e g risk adjusting payments to health plans coverage of assistive technology and the organizing and financing of disability related research The Future of Disability in America is an assessment of both principles and scientific evidence for disability policies and services This book s recommendations propose steps to eliminate barriers and strengthen the evidence base for future public and private actions to reduce the impact of disability on individuals families and society

Peninsula Transportation District Commission Route Deviation Feasibility Study ,1998 Many urban transit providers are faced with the problem of declining ridership on traditional fixed route services in low density suburban areas As a result most fixed route services in such areas are not economically viable for the transit provider Ridership levels on such routes could be increased by adding more flexibility to the fixed route structure by replacing the fixed route with a route deviation service The higher level of service offered by route deviation has the potential to attract non traditional transit riders Another reason why transit providers are turning to route deviation is the passage of the Americans with Disabilities Act ADA in 1990 which has brought forth new and greater responsibilities for transit agencies With the law mandating that certain disabled persons must be provided complementary paratransit service at a nominal cost public transportation providers were suddenly faced with the challenge of providing traditional fixed route transit service while also serving individuals with disabilities There are three categories of paratransit eligible riders under the ADA 1 Those who cannot independently board ride disembark from accessible vehicles 2 Those who can independently board and ride an accessible bus but an accessible vehicle is not available for the route and time desired 3 Those who have a specific impairment that prevent them from boarding or riding a bus ADA requires that only the first of the three categories be provided service and only if they want to travel within 3 4 mile of an existing fixed route To accomplish this around 550 fixed route systems across the nation have increased or added the availability of paratransit services Balog 1997 Consequently there has been a notable and steady increase in the demand for paratransit by disabled people in the post ADA era Since the cost of providing accessible paratransit is definitely higher than the cost of accessible fixed route the increased demand for paratransit is burdening transit agencies Balog 1997 Also some individuals with disabilities currently using paratransit services could effectively use accessible fixed route services at a lower cost to the transit provider This has led a number of transit providers to look for new options to encourage paratransit riders to use fixed route services Most of these options are centered on improving the level of service of fixed route operations and making them more accessible to individuals with disabilities Balog 1997 One

such option that has been tried by a few transit agencies in rural and suburban areas with much success is route deviation service. Route deviation has the potential to meet the challenges faced by urban public transportation providers in a more efficient manner than the current two service practice. Route deviation transit has been used effectively in a limited number of rural and small urban areas of the United States (Rosenbloom 1996) and some suburban areas. However, it has not been proven to be effective in a large urban area. Currently, the Peninsula Transportation District Commission (Pentran) operates a fixed route bus system with 13 routes in a service area composed of the cities of Hampton, Newport News, and York County. Additionally, Pentran provides paratransit services for the disabled under the mandates of the 1990 Americans with Disabilities Act (ADA).

Traveler Response to Transportation System Changes (Franklin Spielberg, Transit Cooperative Research Program, 2004). Demand responsive transit, sometimes referred to as dial a ride or more generally paratransit, includes those services where a transit vehicle does not operate a fixed route but rather calls at selected geographic points in response to specific service requests. Service may or may not be provided on a fixed schedule. Americans with Disabilities Act (ADA) services are a subgroup designed specifically for persons who because of a disability cannot access or ride available fixed route services. Traveler response and related information are presented in this chapter for both services open to the general public and ADA services intended for persons with disabilities. This chapter (Chapter 6) will be of interest to transit and transportation planning practitioners, educators, researchers, and professionals across a broad spectrum of transportation and planning agencies, metropolitan planning organizations, and local, state, and federal government agencies.

Taking the High Road (Bruce Katz, Robert Puentes, 2006-05-25). Since the early 1990s, federal transportation laws have slowly started to level the playing field between highway and alternative transportation strategies as well as between older and newer communities. The Intermodal Surface Transportation Efficiency Act of 1991 and the Transportation Equity Act for the 21st Century made substantial changes in transportation practices. These laws devolved greater responsibility for planning and implementation to urban development organizations and introduced more flexibility in the spending of federal highway and transit funds. They also created a series of special programs to carry out important national objectives and they tightened the linkages between transportation spending and issues such as metropolitan air quality. *Taking the High Road* examines the most pressing transportation challenges facing American cities, suburbs, and metropolitan areas. The authors focus on the central issues in the ongoing debate and deliberations about the nation's transportation policy. They go beyond the federal debate, however, to lay out an agenda for reform that responds directly to those responsible for putting these policies into practice: leaders at the state, metropolitan, and local levels. This book presents public officials with options for reform. Hoping to build

upon the progress and momentum of earlier transportation laws it ensures a better understanding of the problems and provides policymakers journalists and the public with a comprehensive guide to the numerous issues that must be addressed Topics include A wide ranging policy framework that addresses the reauthorization debate An examination of transportation finance and how it affects cities and suburbs An analysis of metropolitan decisionmaking in transportation The challenges of transportation access for working families and the elderly The problems of increasing traffic congestion and the lack of adequate alternatives Contributors include Scot *Subject Guide to Books in Print* ,1991 **Transit Markets of the Future** Sandra Rosenbloom,Transit Cooperative Research Program,1998 Examines the effects of current trends e g demographic economic social land use and transport policy and trends expected over the next 15 years on current and future transit markets Although many of these trends are not favorable to public transit a number are identified that provide opportunities for maintaining current transit markets and creating new expanded or different transit markets The report identifies 40 transit service concepts that appear to offer the most effective means of adjusting to these societal trends

Developing, Enhancing, and Sustaining Tribal Transit Services Albert T. Stoddard,David Sampson (M.C.P.),2012 This report provides an overview of the tribal transit planning process and detailed guidance about the various steps for planning and implementing a tribal transit system The steps that are described may be used for planning a new transit system enhancing an existing service or taking action to sustain services While the guidebook is primarily aimed at tribal transit planners it will also be of interest to tribal transportation planners and liaisons at all levels of government In the research effort data were collected from 67 tribes during Phase 1 and more detailed information was collected from 48 tribes during Phase 2 Fifteen tribes were visited for the development of case studies Data were collected regarding the type of transit services the size and scope of the transit programs and funding approaches Transportation Planning Handbook ITE (Institute of Transportation Engineers),Michael D. Meyer,2016-07-11 A multi disciplinary approach to transportation planning fundamentals The Transportation Planning Handbook is a comprehensive practice oriented reference that presents the fundamental concepts of transportation planning alongside proven techniques This new fourth edition is more strongly focused on serving the needs of all users the role of safety in the planning process and transportation planning in the context of societal concerns including the development of more sustainable transportation solutions The content structure has been redesigned with a new format that promotes a more functionally driven multimodal approach to planning design and implementation including guidance toward the latest tools and technology The material has been updated to reflect the latest changes to major transportation resources such as the HCM MUTCD HSM and more including the most current ADA accessibility regulations Transportation planning has historically followed the rational planning model of defining objectives identifying problems generating and evaluating alternatives and developing plans Planners are increasingly expected to adopt a more multi disciplinary approach especially in light of the rising importance of sustainability and environmental

concerns This book presents the fundamentals of transportation planning in a multidisciplinary context giving readers a practical reference for day to day answers Serve the needs of all users Incorporate safety into the planning process Examine the latest transportation planning software packages Get up to date on the latest standards recommendations and codes Developed by The Institute of Transportation Engineers this book is the culmination of over seventy years of transportation planning solutions fully updated to reflect the needs of a changing society For a comprehensive guide with practical answers The Transportation Planning Handbook is an essential reference
