Saether, P. de Caritat, 2020-08-19 Geochemical Processes Weathering and Groundwater Recharge in Catchments is a specialist book concerned with the natural processes taking place where water

interacts with minerals and organic matter at the earth's surface in soils or within aquifers. It focuses on the all important interface between the hydrological and geochemical cycles in terrestrial ecosystems and is thus particularly relevant to understanding the environment. The book is intended primarily as a reference text for graduate students in Earth Sciences, Hydrology or Environmental Sciences but will be a useful introduction to those studying Chemistry, Biology or Forestry. **Technical Reports Series**

,1990 **Water-resources Investigations Report** Bernard N. Lenz, Denis R. LeBlanc, Paul W. McKee, Brian R. Clark, David A. Saad, Faith A. Fitzpatrick, 2003 *Mirror Lake* Thomas C. Winter, Gene E. Likens, 2009-11-25

Lakes change constantly in response to their surrounding landscape and their airshed. Mirror Lake, located in the White Mountains of New Hampshire, has been carefully researched since the 1960s. This book, edited by Thomas C. Winter and Gene E. Likens, summarizes and interprets the extensive data collected on this lake and its watershed from 1981 to 2000, a period during which the lake was affected by a variety of climate conditions as well as significant human activity. The findings documented also identify the panoply of chemicals influenced by limnological processes and include percentages of inflow sources, percentages of water loss from seepage, surface outflow and evaporation, and the effect of water flow on the lake nutrients. Man-Made and

Natural Radioactivity in Environmental Pollution and Radiochronology Richard Tykva, Dieter Berg, 2013-03-14. Radioactivity can be detected at different levels in almost all objects all over the world, including the human body. This omnipresence of naturally occurring radioactivity is of immediate and crucial concern to people who work in the nuclear industry, to state and local authorities responsible for environmental protection and control of nuclear weapons, and to researchers in physics, e.g. interaction in scientific and technological disciplines such as radiation with matter, chemistry, e.g. management of radioactive wastes, biology, e.g. radiation bioeffects and risks, ecology, e.g. remediation of environmental pollution, electronics, e.g. measurement instruments, etc. Unlike other environmental pollutants such as heavy metals and pesticides, some other scientific disciplines, for example archaeology, hydrology, and geology, profit by the environmental radionuclides using methods based on their application in radiochronology. The basic goal of this book is to examine the complex state of radioactivity in the environment, including its sources and applications. In principle, there are two sources of environmental radioactivity, namely man-made and natural. The authors of this book set out to analyze mainly empirical aspects of the activities of both groups. On one hand, a detailed analysis of the sources releasing radionuclides into the environment by human activities should, while describing environmental pollution and its dangers, contribute to its decrease in the future.
