**Teaching and Learning Through Inquiry** Virginia S. Lee, 2023-07-03 Inquiry guided learning (IGL) refers to an array of classroom practices that promote student learning through guided and increasingly independent investigation of complex questions and problems. Rather than teaching the results of others' investigations, which students learn passively, instructors assist students in mastering and learning through the process of active investigation itself. IGL develops critical thinking, independent inquiry, students' responsibility for their own learning, and intellectual growth and maturity. The 1999 Boyer Commission Report emphasized the importance of establishing a firm grounding in inquiry-based learning and communication of information and ideas. While this approach capitalizes on one of the key strengths of research universities—the expertise of its faculty in research—it is one that can be fruitfully adopted throughout higher education. North Carolina State University is at the forefront of the development and implementation of IGL, both at the course level and as part of a successful faculty-led process of reform of undergraduate education in a complex research institution. This book documents and explores NCSU's IGL initiative from a variety of perspectives: how faculty arrived at their current understanding of inquiry guided learning and how they have interpreted it at various levels; the

individual course the major the college the university wide program and the undergraduate curriculum as a whole The contributors show how IGL has been dovetailed with other complementary efforts and programs and how they have assessed its impact The book is divided into four parts the first briefly summarizing the history of the initiative Part Two the largest section describes how various instructors departments and colleges in a range of disciplines have interpreted inquiry guided learning It provides examples from disciplines as varied as ecology engineering foreign language learning history music microbiology physics and psychology It also outlines the potential for even broader dissemination of inquiry guided learning in the undergraduate curriculum as a whole Part Three describes two inquiry guided learning programs for first year students and the interesting ways in which NCSU s university wide writing and speaking program and growing service learning program support inquiry guided learning Part Four documents how the institution has supported instructors and how they have supported themselves as well as the methods used to assess the impact of inquiry guided learning on students faculty and the institution as a whole The book has been written with three audiences in mind instructors who want to use inquiry guided learning in their classrooms faculty developers considering supporting comparable efforts on their campuses and administrators interested in managing similar undergraduate reform efforts It will also appeal to instructors of courses in the administration of higher education who are looking for relevant case studies of reform While this is a model successfully implemented at a research university it is one that is relevant for all institutions of higher education

empirical studies and case studies Learning Through Practice offers a guide for educators and learners alike to implement active learning strategies and educational techniques Ultimately it advocates for a move towards educational models that prioritize engagement and hands on practice      **Situated Self-guided Learning** Paul Robertson, Olivier

**in Educational Technology** Dr. Anita Sharma,2022-01-16 Scientific Methods in Educational Technology Technology provides tools to try out different designs so that instead of theories of education we may begin to develop a science of education But it cannot be an analytic science like physics or psychology rather it must be a design science more like aeronautics or artificial intelligence For example in aeronautics the goal is to elucidate how different designs contribute to lift drag maneuverability etc Similarly a design science of education must determine how different designs of learning environments contribute to learning cooperation motivation etc Educational technologists would not therefore consider the computer as just another piece of equipment If educational technology is concerned with thinking carefully about teaching and learning then a computer has a contribution to make irrespective of its use as a means of implementation for the design of computer based learning environments gives us a new perspective on the nature of teaching and learning and indeed on general educational objectives Even from a pure engineering perspective it doesn t make much sense to talk about Educational Technology just in terms of Instructional design models or instructional design methods An instructional designer also feels concerned by more fundamental disciplines like general learning theory or pedagogical theory These theories provide interesting insights on issues like the relation between learning type or learning level and appropriate pedagogic strategy how effect and motivation may influence the learning process what multimedia design can learn from theories on human information processing or cognitive load why metacognition and collaborative learning is important etc The book will be of use to the students researchers and general readers of this subject Contents Education International Education Teacher Education and School Counselor Role of Self Activity Educational Projects Practices and Global Partnerships A Comparative Studies Perspective Hypermedia Development Methodology The Technology in Education On line Technology Integration Challenges and Opportunities Test Development Encyclopedia of Distance Learning, Second Edition Rogers, Patricia L.,Berg, Gary A.,Boettcher, Judith V.,Howard, Caroline,Justice, Lorraine,Schenk, Karen D.,2009-01-31 Offers comprehensive coverage of the issues concepts trends and technologies of distance learning
