**Guide to the Unified Process featuring UML, Java and Design Patterns** John Hunt, 2003-07-30 John Hunt's book guides you through the use of the UML and the Unified Process and their application to Java systems. This second edition is considerably revised and extended and includes examples taken from the latest version of Rational Rose and Together. **Design Patterns for e-Science** Henry Gardner, Gabriele Manduchi, 2007-05-03 This is a book about a code and about coding. The code is a case study which has been used to teach courses in e Science at the Australian National University since 2001. Students learn advanced programming skills and techniques in the Java language. Above all they learn to apply useful object oriented design patterns as they progressively refactor and enhance the software. We think our case study EScope is as close to real life as you can get. It is a smaller version of a networked graphical waveform browser which is used in the control rooms of fusion energy experiments around the world. It is quintessential e Science in the sense of e Science being computer science and information technology in the service of science. It is not specifically Grid enabled but we develop it in a way that will facilitate its deployment onto the Grid. The standard version of EScope interfaces with a specialised database for waveforms and related data known as MDSplus. On the accompanying CD we have provided you with software which will enable you to install MDSplus, EScope and sample data files onto Windows or Linux computers. There is much additional software including many versions of the case study as it gets built up and progressively refactored using design patterns. There will be a home web site for this book which will contain up to date information about the software and other aspects of the case study.

conference was truly international both in terms of the amount of foreign contributions and in terms of composition of steering and scientific committees The book and the conference serves as a platform of professional exchange of knowledge and experience for the latest trends in software development and object oriented technologies theory and practice This proceedings present information on the latest developments and mediate the exchange of experience between practitioners and academia

**Artificial Intelligence and Soft Computing** Leszek Rutkowski,Rafał Scherer,Marcin Korytkowski,Witold Pedrycz,Ryszard Tadeusiewicz,Jacek M. Zurada,2018-05-24 The two volume set LNAI 10841 and LNAI 10842 constitutes the refereed proceedings of the 17th International Conference on Artificial Intelligence and Soft Computing ICAISC 2018 held in Zakopane Poland in June 2018 The 140 revised full papers presented were carefully reviewed and selected from 242 submissions The papers included in the second volume are organized in the following five parts computer vision image and speech analysis bioinformatics biometrics and medical applications data mining artificial intelligence in modeling simulation and control and various problems of artificial intelligence

***Advances in Computing*** Jairo E. Serrano C.,Juan Carlos Martínez-Santos,2018-09-17 This book constitutes the refereed proceedings of the 13th Colombian Conference on Computing CCC 2018 held in Cartagena Colombia in September 2018 The 46 revised full papers presented were carefully reviewed and selected from 194 submissions The papers deal with the following topics information and knowledge management software engineering and IT architectures educational informatics intelligent systems and robotics human computer interaction distributed systems and large scale architectures image processing computer vision and multimedia security of the information formal methods computational logic and theory of computation

***Modeling with Rules Using Semantic Knowledge Engineering*** Grzegorz J. Nalepa,2017-10-04 This book proposes a consistent methodology for building intelligent systems It puts forward several formal models for designing and implementing rules based systems and presents illustrative case studies of their applications These include software engineering business process systems Semantic Web and context aware systems on mobile devices Rules offer an intuitive yet powerful method for representing human knowledge and intelligent systems based on rules have many important applications However their practical development requires proper techniques and models a gap that this book effectively addresses

**Semantic Web Services** Rudi Studer,Stephan Grimm,Andreas Abecker,2007-05-23 In just a few years service oriented architectures SOA and Web services not only gained considerable interest in computer science research they were also taken up with unanimity by all major international players in the IT industry However and in spite of all existing standards in most SOA applications much human intervention is still required for example to interpret the semantics of informal descriptions or to harmonize incompatible data schemata Semantic Web services combine Web services communication technology with the intelligent processing of ontology based metadata to achieve highly integrated enterprise application integration scenarios for service look up schema matching or protocol negotiation for example Rudi Studer and his team deliver a self contained compendium about this exciting field

starting with the basic standards and technologies and also including advanced applications in eGovernment and eHealth The contributions provide both the theoretical background and the practical knowledge necessary to understand the essential ideas and to design new cutting edge applications They address computer science students as well as researchers in academia and industry who need a concise introduction and state of the art survey of current research and the book can easily be used as the basis of a specialized course on Web services or Semantic Web applications In addition IT professionals will be able to assess the potential and possible benefits of this new technology

Abstraction in Artificial Intelligence and Complex Systems Lorenza Saitta, Jean-Daniel Zucker, 2013-06-05 Abstraction is a fundamental mechanism underlying both human and artificial perception representation of knowledge reasoning and learning This mechanism plays a crucial role in many disciplines notably Computer Programming Natural and Artificial Vision Complex Systems Artificial Intelligence and Machine Learning Art and Cognitive Sciences This book first provides the reader with an overview of the notions of abstraction proposed in various disciplines by comparing both commonalities and differences After discussing the characterizing properties of abstraction a formal model the KRA model is presented to capture them This model makes the notion of abstraction easily applicable by means of the introduction of a set of abstraction operators and abstraction patterns reusable across different domains and applications It is the impact of abstraction in Artificial Intelligence Complex Systems and Machine Learning which creates the core of the book A general framework based on the KRA model is presented and its pragmatic power is illustrated with three case studies Model based diagnosis Cartographic Generalization and learning Hierarchical Hidden Markov Models
