Guidebook For Clinical Psychology Interns:

Guidebook for Clinical Psychology Interns Gary K. Zammit, James W. Hull, 2013-11-21 The internship is the capstone experience of professional education and training preparatory for the application of psychology in health and human services. It is analogous for the practice of psychology to what the doctoral dissertation represents in the student's development as a scholar. At its best, the internship should be viewed as far more than simply a requirement for one's degree or licensure: a rite de passage for entry into the profession. Rather, it should be regarded by students and faculty alike as a rich opportunity for personal and professional growth, the opportunity to assess and even rethink one's assumptions about human behavior and psychological problems in the context of different client populations, types of problems addressed, and psychological service system environments. In articulating the first formal guidelines for the accreditation of graduate training programs in clinical psychology, a committee of the American Psychological Association comprised of distinguished psychologists of their day asked, "What are the aims of a psychological internship?" The committee replied to that question as follows: "Underlying all of its aims is the principle that the knowledge essential to the practice of clinical psychology cannot be obtained solely from books, lectures, or any other devices which merely provide information about people or about ways of studying them." **A Guide to Obtaining a Psychology Internship** Edwin Inglee Megargee, 1990 **The Internship, Practicum, and Field Placement Handbook** Brian N. Baird, Debra Mollen, 2023-04-18 The Internship Practicum and Field Placement Handbook offers real world knowledge of the skills interns in the helping professions need through every phase of their internship, practicum, or field placement. The focus is on topics that may not have been addressed or fully developed through regular academic coursework: meeting clients, fees for service, supervision, ethics, legal issues, diversity, clinical writing, case notes, and clinical records, personal safety, self-care, advocacy, technology, termination, and planning for the future. Every phase of the internship is discussed sequentially, from finding and preparing for placements to concluding relationships with clients and supervisors. Drawing from the fields of psychology, counseling, social work, school counseling, and psychiatry, this edition has been thoroughly updated with the latest research and clinical literature, ethical codes of the leading professions, and legal and regulatory developments at federal and state levels. This edition also features up-to-date coverage of remote education, training, supervision, and practice as impacted by COVID-19 and technological changes. Diversity awareness and insights are woven through every element of the text, taking into account recent developments such as Black Lives Matter, the MeToo movement, gender identity awareness. Other emerging issues are also addressed, including the impact of the opioid epidemic and substance abuse deaths, and the ethical/legal issues that may arise relating to reproductive health and abortion-related legislation. In-text exercises and thought problems are incorporated into each chapter for students to develop insights and skills. Eleven online appendices are also included, containing learning plans, supervision agreements, evaluation forms, and ethical guidelines that students will need in preparation for the next phase of their training. The Internship Practicum and

Rozensky, Jerry J. Sweet, Steven M. Tavian, 2013-06-29 For two decades I have been responding to questions about the nature of health psychology and how it differs from medical psychology behavioral medicine and clinical psychology From the beginning I have taken the position that any application of psychological theory or practice to problems and issues of the health system is health psychology I have repeatedly used an analogy to Newell and Simon's General Problem Solver program of the late

1950s and early 1960s which had two major functional parts in addition to the executive component One was the problem solving core the procedural competence the other was the representation of the problem environment In the analogy the concepts knowledge and techniques of psychology constitute the core competence the health system in all its complexity is the problem environment A health psychologist is one whose basic competence in psychology is augmented by a working knowledge of some aspect of the health system Quite apparently there are functionally distinct aspects of health psychology to the degree that there are meaningful subdivisions in psychological competence and significantly different microenvironments within the health system I hesitate to refer to them as areas of specialization as the man who gave health psychology its formal definition Joseph Matarazzo has said that there are no specialties in psychology cited in the editors preface to this book
