modeling digital analog mixed signal and mixed technology systems VHDL AMS extends VHDL to bring the successful HDL modeling methodology of digital electronic systems design to these new design disciplines Gregory Peterson and Darrell Teegarden join best selling author Peter Ashenden in teaching designers how to use VHDL AMS to model these complex systems This comprehensive tutorial and reference provides detailed descriptions of both the syntax and semantics of the language and of successful modeling techniques It assumes no previous knowledge of VHDL but instead teaches VHDL and VHDL AMS in an integrated fashion just as it would be used by designers of these complex integrated systems Explores the design of an electric powered unmanned aerial vehicle system UAV in five separate case studies to illustrate mixed signal mixed technology power systems communication systems and full system modeling

Guide to Wireless Ad Hoc Networks Sudip Misra, Isaac Woungang, Subhas Chandra Misra, 2009-03-02 Overview and Goals Wireless communication technologies are undergoing rapid advancements The past few years have experienced a steep growth in research in the area of wireless ad hoc networks The attractiveness of ad hoc networks in general is attributed to their characteristics features such as ability for infrastructure less setup minimal or no reliance on network planning and the ability of the nodes to self organize and self

configure without the involvement of a centralized network manager, router, access point, or a switch. These features help to set up a network fast in situations where there is no existing network setup or in times when setting up a fixed infrastructure network is considered infeasible, for example in times of emergency or during relief operations. Even though ad hoc networks have emerged to be attractive and they hold great promises for our future, there are several challenges that need to be addressed. Some of the well-known challenges are attributed to issues relating to scalability, quality of service, energy efficiency, and security.

Formal Approaches to Agent-Based Systems Michael G. Hinchey,James L. Rash,Walter F. Truszkowski,Christopher Rouff,Diana Gordon-Spears,2003-07-29 The idea of a FAABS workshop was first conceived in 1998 at the NASA Goddard Space Flight Center while the Agent Technology Development Group in the Advanced Architectures and Automation Branch Code 588 was developing a prototype agent community to automate satellite ground operations While developing this system several race conditions arose within and between agents Due to the complexity of the agents and the communications between them it was decided that a formal approach was needed to specify the agents and the communications between them so that the system could be checked for additional errors A formal model of the inter agent communications was developed with the expectation that this would enable us to find more errors Success in this convinced us of the importance of using formal methods to model agent based systems To share our own experiences and to learn how others were approaching these issues we decided to hold a workshop on formal methods and agent based systems The response was overwhelming The result was the first FAABS workshop which was held at the NASA Goddard Space Flight Center Posters paper presentations panels and an invited talk by J Moore stimulated much discussion and subsequent collaboration
