

Low-risk drinking guidelines

Men and women should not regularly drink more than **14 units per week**

14 units is
the equivalent of

Avoid alcohol
when pregnant
or trying to
conceive

**6 pints
of beer**

(4% abv, 568ml)

or

**6 glasses
of wine**

(13% abv, 175ml)

or

**14 shots
of a spirit**

(40% abv, 25ml)

It's best to spread this evenly across the week rather than drinking all at once.
Having several alcohol-free days each week is a good way to cut down.

Guidelines for drinking-water quality World Health Organization, 2022-03-31 The fourth edition incorporating the first and second addenda of the World Health Organization's WHO Guidelines for drinking water quality GDWQ builds on over 60 years of guidance by WHO on drinking water quality which has formed an authoritative basis for the setting of national regulations and standards for water safety in support of public health It is the product of significant revisions to clarify and elaborate on ways of implementing its recommendations of contextual hazard identification and risk management through the establishment of health based targets catchment to consumer water safety plans and independent surveillance Updates in this latest edition reflect new evidence and further provides additional explanations to support better understanding and application of the guidance More details on the updates are included in the GDWQ preface

Alcohol guidelines Great Britain: Parliament: House of Commons: Science and Technology Committee, 2012-01-09 This report raises concerns about the Government's advice on sensible drinking and recommends that alcohol guidelines are reviewed In 1987 the sensible limits for drinking were defined as 21 units of alcohol a week for men and 14 for women By the early 1990s scientific evidence suggesting that alcohol consumption might reduce the risk of coronary heart disease prompted a review of the guidelines and the drinking guidelines were then couched in daily terms men should not regularly drink more than three to four units a day and women no more than two to three units a day The Committee is sceptical about using the purported health benefits of alcohol as a basis for daily guidelines for all the adult population particularly as any protective effects would only apply to men over 40 years and post menopausal women Evidence suggests that the guidelines should not be increased and that people should take at least two drink free days a week While public awareness of the existence of guidelines is high a deeper understanding of what the guidelines were and of what a unit of alcohol looked like is lacking Through the Public Health Responsibility Deal the Government is working with the drinks industry to ensure that over 80% of alcoholic products on shelf will have labels with alcoholic unit content and the drinking guidelines by 2013 But the Government should remain mindful that sensible drinking messages may conflict with the business objectives of drinks companies and exercise proper scrutiny and oversight

Guidelines for drinking-water quality, 2006 The Guidelines for Drinking water Quality are kept up to date through a process of rolling revision which leads to periodic release of documents that may add to or supersede information in this volume This version of the Guidelines integrates the third edition which was published in 2004 with the first addendum to the third edition published in 2005 The Guidelines are addressed primarily to water and health regulators policy makers and their advisors to assist in the development of national standards The

Guidelines and associated documents are also used by many others as a source of information on water quality and health and on effective management approaches

WHO Guidelines for the Safe Use of Wastewater Excreta and Greywater World Health Organization, 2006 Volume 4 of the Guidelines for the safe use of wastewater excreta and greywater provides information on the assessment and management of risks associated with microbial hazards It explains requirements to promote the safe use of excreta and greywater in agriculture including minimum procedures and specific health based targets and how those requirements are intended to be used This volume also describes the approaches used in deriving the guidelines including health based targets and includes a substantive revision of approaches to ensuring microbial safety

Analysis and Formation of Disinfection Byproducts in Drinking Water, 2021-04-01 Drinking water disinfection has markedly reduced diseases caused by waterborne pathogenic microorganisms However an unintended consequence of disinfection and or oxidation processes is the generation of disinfection byproducts DBPs which are formed from the reactions of disinfectants oxidants with water matrix components This volume of the Comprehensive Analytical Chemistry Handbook presents recent advances about the formation identification and quantification of inorganic and organic DBPs during oxidative processes The book begins with a first chapter reviewing the most recent non targeted screening approaches and workflows to characterize DBPs using low high and ultra high resolution mass spectrometry The second chapter discusses the analysis of inorganic chloramines in waters using on site and or in lab analytical methods The third chapter provides an overview of the current knowledge about the mechanisms of chlorine dioxide reactions and byproducts formation The fourth chapter presents some fundamental and practical aspects about ozonation processes in water treatment and provides an overview about ozone reaction mechanisms and byproducts formation The fifth chapter focuses on the reactivity of halide ions particularly bromide and iodide with common oxidants and the role they play in determining the speciation of DBPs in treated waters The chapter also presents

strategies to mitigate the formation of DBPs during oxidation processes Finally the last chapter tackles the topic of DBPs formation during potable water reuse It discusses the formation of DBPs of major concern in both membrane based and non membrane based potable water reuse treatment schemes Researchers water treatment specialists and regulators will find in this book a valuable and compact resource on several key topics regarding the formation identification quantification and mitigation of DBPs Identification and quantification of known and unknown DBPs Formation of DBPs during different disinfection oxidation processes DBPs of concern in new technologies and or new applications of existing technologies in water treatment

Heterotrophic Plate Counts and Drinking-water Safety Jamie Bartram,J. A. Cotruvo,M. Exner,C. Fricker,A. Glasmacher,2003-08-31 Heterotrophic Plate Counts and Drinking water

Safety provides a critical assessment of the role of the Heterotrophic Plate Count (HPC) measurement in drinking water quality management. It was developed from an Expert workshop of 32 scientists convened by the World Health Organization and the WHO NSF International Collaborating Centre for Drinking Water Safety and Treatment in Geneva, Switzerland. Heterotrophs are organisms including bacteria, yeasts, and moulds that require an external source of organic carbon for growth. The HPC test or Standard Plate Count applied in many variants is the internationally accepted test for measuring the heterotrophic microorganism population in drinking water and also other media. It measures only a fraction of the microorganisms actually present and does not distinguish between pathogens and non-pathogens. High levels of microbial growth can affect the taste and odor of drinking water and may indicate the presence of nutrients and biofilms which could harbor pathogens as well as the possibility that some event has interfered with the normal production of the drinking water. HPC counts also routinely increase in water that has been treated by an in-line device such as a carbon filter or softener in water dispensing devices and in bottled waters and indeed in all water that has suitable nutrients, does not have a residual disinfectant, and is kept under sufficient conditions. There is debate among health professionals as to the need, utility, or quantitative basis for health-based standards or guidelines relating to HPC measured regrowth in drinking water. The issues that were addressed in this work include the relationship between HPC in drinking water including that derived from in-line treatment systems, dispensers, and bottled water, and health risks for the general public; the role of HPC as an indirect indicator or index for pathogens of concern in drinking water; the role of HPC in assessing the efficacy and proper functioning of water treatment and supply processes; the relationship between HPC and the aesthetic acceptability of drinking water. Heterotrophic Plate Counts and Drinking Water Safety provides valuable information on the utility and the limitations of HPC data in the management and operation of piped water systems as well as other means of providing drinking water to the public. It is of particular value to piped public water suppliers and bottled water suppliers, manufacturers, and users of water treatment and transmission equipment and in-line treatment devices, water engineers, sanitary and clinical microbiologists, and national and local public health officials and regulators of drinking water quality. Guidelines for drinking-water quality: small water supplies World Health Organization, 2024-02-14. Small drinking water supplies commonly experience operational, managerial, technical, and resourcing challenges that impact their ability to deliver safe and reliable services. The needs and opportunities associated with these supplies therefore warrant explicit consideration in policies and regulations. These Guidelines specifically tailored to small water supplies build on over 60 years of guidance by the World Health Organization (WHO) on drinking water quality and safety. They focus on establishing drinking water quality regulations and standards that are health-based and context-appropriate, on proactively managing risks through water safety planning and sanitary inspections, and on carrying out independent surveillance. The guidance is intended primarily for decision makers at national and subnational levels with responsibility for developing regulatory frameworks and

support programmes related to these activities Other stakeholders involved in water service provision will also benefit from the guidance in this document Designed to be practical and accessible these Guidelines offer clear guidance that is rooted in the principle of progressive improvement State of the art recommendations and implementation guidance are provided drawn from a comprehensive evidence review and established good practices Additionally case examples are provided from countries and areas around the world to demonstrate how the guidance in this publication has been implemented in practice in a wide variety of contexts Together with WHO s 2024 Sanitary inspection packages a supporting tool for the Guidelines for drinking water quality small water supplies these Guidelines update and supersede WHO s 1997 Guidelines for drinking water quality Volume 3 surveillance and control of community supplies Key changes to this updated publication include a greater focus on preventive risk management and a broader range of small water supplies covered including those managed by households communities and professional entities

Sustainable Water Engineering Ramesha Chandrappa,Diganta B. Das,2014-06-16 Ensuring safe and plentiful supplies of potable water both now and for future generations and developing sustainable treatment processes for wastewater are among the world s greatest engineering challenges However sustainability requires investment of money time and knowledge Some parts of the world are already working towards this goal but many nations have neither the political will nor the resources to tackle even basic provision and sanitation Combining theory and practice from the developing and developed worlds with high and low tech high and low cost solutions this book discusses fundamental and advanced aspects of water engineering and includes water resource issues including climate change water scarcity economic and financial aspects requirements for sustainable water systems fundamentals of treatment and process design industrial water use and wastewater treatment sustainable effluent disposal sustainable construction principles With integrated theory design and operation specifications for each treatment process this book addresses the extent to which various treatment methods work in theory as well as how cost effective they are in practice It provides a nontechnical guide on how to recover and reuse water from effluent which is suitable for those in water resource management environmental planning civil and chemical engineering

Protecting Groundwater for Health O. Schmoll,G. Howard,J. Chilton,I. Chorus,2006-09-30 Protecting drinking water resources is the first barrier against pathogens and substances hazardous to health Practitioners in drinking water supply or surveillance from the local and technical level up to senior management have a key role in initiating collaboration with other sectors such as environment land use planning or agriculture towards safeguarding drinking water sources Protecting Groundwater for Health provides a structured approach to analysing hazards to groundwater quality assessing the risk they may cause for a specific supply setting priorities in addressing these and developing management strategies for their control For health professionals it thus is a tool for access to environmental information needed for such a process and for

professionals from other sectors it gives a point of entry for understanding health aspects of groundwater management This book presents tools for developing strategies to protect groundwater for health by managing the quality of drinking water sources Section I covers the natural science background needed to understand which pathogens and chemicals are relevant to human health how they are transported in the sub surface and how they may be reduced removed or retarded Section II provides guidance for compiling information needed to characterise the drinking water catchment area in order to assess health hazards potentially reaching groundwater Section III provides conceptional guidance on prioritising both hazards and management responses Section IV provides an overview of the potential management actions that may be taken to protect drinking water sources These begin with their integration into a comprehensive Water Safety Plan that covers all supply steps from catchment to consumer Section V provides an overview of measures to prevent pollution from human activities in the catchment beginning with the overarching issues of policy land use planning and implementation for protecting groundwater Overviews are presented of the specific management approaches that help avoid groundwater pollution from the range of human activities in the catchment i e agriculture sanitation practices industry mining military sites waste disposal and traffic

Guidelines for the Treatment of Alcohol Problems Paul S. Haber, Benjamin C. Riordan, 2021-04-01 The Australian Guidelines for the Treatment of Alcohol Problems have been periodically developed over the past 25 years In 1993 the first version of these guidelines titled An outline for the management of alcohol problems Quality assurance in the treatment of drug dependence project was published Mattick Haber et al 2009 The present version of the Guidelines was also commissioned by the Commonwealth of Australia to remain current and integrated with the updated NHMRC consumption guidelines 2020 In order to ensure that guidelines remain relevant the next set of guidelines should be updated in 2025 consistent with NHMRC recommendation that guidelines be updated every five years These guidelines aim to provide up to date evidence based information to clinicians on available treatments for people with alcohol problems and are largely directed towards individual clinicians in practice such as primary care physicians general practitioners nursing staff specialist medical practitioners psychologists and other counsellors and other health professionals Some chapters highlight service or system level issues that impact on clinicians and their patients These include recommendations concerning Aboriginal and Torres Strait Islander peoples culturally and linguistically diverse groups stigma and discrimination Elsewhere organisation capacity is implied such as medical resources for withdrawal management where recommendations indicate use of medications As all forms of treatment will not be readily available or suitable for all populations or settings these guidelines may require interpretation and adaptation
