from the time when biological membranes first came into being and were folded to produce the first cells within which the earliest enzymes were wrought Countless changes have taken place within them so that now only those enzymes exist that play specific roles in the functions of the living cells of today Those in the nervous system possess a multiple role in the creation maintenance and ultimate breakdown of the component cells and in enabling consciousness perception memory and thought to become possible But though life may go on forever the enzymes that make life possible will undergo the many changes involved in the evolutionary process
