## Evaluating XRF, ICP-OES, and ICP-MS Analytical Technologies

---

### Introduction

Air pollution is a continuous concern of industries, governments, and populations worldwide. Particularly the harmful health effects of the exposure to heavy metals such as lead, arsenic, or cadmium absorbed into particulate matter, carried through the air, and introduced into the lungs and body are within focus.

These particles are principally generated by processes such as combustion. Monitoring and analysis of the elements present in these airborne particles is performed by a variety of organizations, - by industry, environmental protection agencies, as well as research institutes and testing laboratories for

environmental and occupational health and safety.

Fortunately, modern laboratory-grade spectrometric analyzers are available that can handle the necessary analyses. They provide accurate, efficient airborne elemental particle identification and measurement. This paper explains several of the methodologies commonly employed for these applications — focusing on ED-XRF, ICP-OES, and ICP-MS technologies — and describes the desirable attributes of suitable analyzer models for each.

## **Elemental Analysis Of Airborne Particles:**

**Elemental Analysis of Airborne Particles** Marsha Creatchman, 2024-12-06 An increased standard of living in developed and developing countries has brought about a distinct rise in pollution. The problem of air pollution has specifically increased the public's awareness of the environmental and health related consequences resulting from modern day industrial technology. This detailed collection of works devoted to the most popular methods in elemental analysis of airborne particles offers investigators a comprehensive book on the most common laboratory analytical methods currently used in trace element analysis. Discussed are atomic absorption spectrometry, inductively coupled plasma atomic emission, particle induced gamma ray analysis, particle elastic scattering and Rutherford backscattering and neutron activation analysis. Specific sections on quality assurance, quality control and source receptor modeling have also been included.

**Analysis of Airborne Particles by Physical Methods** Malissa Hanns, 2018-01-18 An accurate and complete characterization of the solid pollutants in air, taking into account the physicochemical and technological data available concerning the origin, transformation and the effects of dust, is a synoptic approach known as SISintegrated dust analysis and is the underlying concept of this book.

*Elemental Analysis by Particle Accelerators* Zeev Alfassi, Max Peisach, 2020-11-26 *Elemental Analysis by Particle Accelerators* describes the theory, methodology and applications for a wide variety of sensitive, non-destructive methods of analysis capable of both high selectivity and multielemental determinations. Specific methods discussed include radioactive methods, particle backscatter analysis, recoil techniques and nuclear reaction analysis. The use of multielemental PIXE and PIGE analyses of real world thick samples in environmental studies, trace element applications in biology and provenance studies in archaeology are also covered. The book is a useful reference for practicing specialists and an essential text for students.

*Element Analysis of Biological Samples* G. Venkatesh Iyengar, K. S. Subramanian, Joost R.W. Woittiez, 2020-11-25 Despite the development of innovative new analytical techniques for biological trace element research, today's trace element investigators face formidable obstacles to obtaining reliable data. This complete reference identifies and assesses the challenges the analyst encounters at each stage of an analysis and discusses the effects of various techniques on the sample. Three internationally recognized scientists and authors consider the effects of the numerous collection, storage and sample preparatory techniques used in sample analysis. Proper analytical quality control, including such critical factors as sampling and sample preparation, specimen preservation and storage and ashing, is examined. The book also looks at sample preparation methods unique to various instruments and speciation chemistry issues and examines the link between chemical analysis and specimen banking. A previously unrecognized source of error, presampling factors, is also discussed.

**Sample Preparation for Trace Element Analysis** Zoltan Mester, Ralph E. Sturgeon, 2003-12-16 Following the collection of a sample, every analytical chemist will agree that its subsequent preservation and processing are of paramount importance. The availability of high performance analytical

instrumentation has not diminished this need for careful selection of appropriate pretreatment methodologies intelligently designed to synergistically elicit optimum function from these powerful measurement tools

**Sample Preparation for Trace Element Analysis** is a modern comprehensive treatise providing an account of the state of the art on the subject matter The book has been conceived and designed to satisfy the varied needs of the practicing analytical chemist It is a multi author work reflecting the diverse expertise arising from its highly qualified contributors The first five chapters deal with general issues related to the determination of trace metals in varied matrices such as sampling contamination control reference materials calibration and detection techniques The second part of the book deals with extraction and sampling technologies totaling 15 chapters providing theoretical and practical hints for the users on how to perform specific extractions Subsequent chapters overview seven major representative matrices and the sample preparation involved in their characterization This portion of the book is heavily based on the preceding chapters dealing with extraction technologies The last ten chapters are dedicated to sample preparation for trace element speciation First title to provide comprehensive sample preparation information dealing specifically with the analysis of samples for trace elements The 39 chapters are authored by international leaders of their fields
