Boundary Element Methods for Heat Transfer with Phase Change Problems: Theory and Application S. G. Ahmed, 2022-06-30 The mathematical modelling of free and moving boundary problems are an important topic in engineering industry technology and theoretical sciences These models allow us to make calculations involved in phase change transitions of materials due to heat transfer Boundary layer applications are widespread in research and industry Boundary Element Methods for Heat Transfer with Phase Change Problems Theory and Application equips the reader with information about heat transfer problems occurring during phase changes The book covers several boundary element methods including methods for phase changes fixed and moving domains and new approaches The contents are rounded off with chapters on numerical results and

industrial applications Key features Simple didactic presentation of boundary layer problems for heat transfer problems  
 Covers a wide range of boundary element methods Includes methods for fixed and moving domains Explains industrial  
 applications of the methods Includes solutions to numerical problems The book serves as a textbook for students of advanced  
 mathematics and engineering It is also a handbook for researchers working on numerical analysis who require a focused  
 volume on boundary element methods for heat transfer applications      Encyclopedia of Environmental Science and  
 Engineering, Volumes One and Two James R. Pfafflin, Edward N. Ziegler, 2006-01-13 Completely revised and updated

 This book traces the history of English education in the People's Republic of China from 1949 to the present day It uses the  
 junior secondary school curriculum as the means to examine how English curriculum developers and textbook writers have  
 confronted the shifting ambiguities and dilemmas over five distinct historical periods The study of the processes of  
 curriculum development and the products such as syllabi and textbooks offers insights into the construction of an official  
 English as well as what was considered as acceptable content in English This book addresses fundamental and significant  
 questions concerning the English promoted in China namely its characteristics its changes over time and explanations for  
 such changes and the kind of content that has been viewed as appropriate for textbooks To investigate these issues the  
 analysis draws on qualitative and quantitative data such as interviews with principal stakeholders and analysis of the syllabus  
 and recommended textbooks Specifically it looks at the choice and organization of linguistic components and the orientation  
 and messages of the curriculum Language education in China during the second half of the twentieth century might arguably  
 be called the world's largest language engineering project In this comprehensive study Dr Adamson examines a part of that  
 project by charting the twists and turns of English language education from the pre revolutionary period to the present He  
 successfully illustrates how tensions in China's massive educational system are negotiated from center to periphery how  
 textbook writers adapt to the socio political mandates of their time to construct formal school curricula Adamson also raises  
 significant questions regarding the contradictions inherent in Chinese globalization Heidi Ross Professor Department of  
 Educational Leadership and Policy Studies School of Education Indiana University at Bloomington Bob Adamson has provided  
 in this book one of the first detailed studies published in English of the history of a school subject in the PRC The study  
 provides fascinating insights into the changing nature of the English curriculum the shifting socio political context of the PRC  
 and their complex inter relationships Paul Morris President The Hong Kong Institute of Education The learning of English is  
 a crucial aspect of China's opening up to the world and increasingly prominent global role This welcome volume provides an  
 in depth historical perspective on this important subject including the recent periods of modernization 1978 1993 and

globalization 1993 to the present It should be compelling reading for all those involved with contemporary China across a wide spectrum of areas Ruth Hayhoe University of Toronto President Emerita The Hong Kong Institute of Education
