Several ceramic parts have already proven their suitability for serial application in automobile engines in very impressive ways especially in Japan the USA and in Germany However there is still a lack of economical quality assurance concepts Recently a new generation of ceramic components for the use in energy transportation and environment systems has been developed The efforts are more and more system oriented in this field The only possibility to manage this complex issue in the future will be interdisciplinary cooperation Chemists physicists material scientists process engineers mechanical engineers and engine manufacturers will have to cooperate in a more intensive way than ever before The R D activities are still concentrating on gas turbines and reciprocating engines but also on brakes bearings fuel cells batteries filters membranes sensors and actuators as well as on shaping and cutting tools for low expense machining of ceramic components This book summarizes the scientific papers of the 7th International Symposium Ceramic Materials and Components for Engines Some of the most fascinating new applications of ceramic materials in energy transportation and environment systems are presented The proceedings shall lead to new ideas for interdisciplinary activities in the future **Coatings for High-temperature Structural Materials** National Research Council (U.S.). Committee on Coatings for High-Temperature Structural Materials,1996 This report reviews the state of the art for coating systems based on the following approach First the application needs were identified and a description of the domain of use was developed Second the environment that currently exists and the substrate materials that are now used in the hot section of gas turbine engines were examined This in turn led to a more complete definition of the coatings systems required Third the application processes the industrial base and the repair and overhaul requirements were discussed and the support capabilities were assessed This review provided a baseline for discussion of future trends and indicated how U S industry government and academia are planning to address the requirements of advanced propulsion systems **Japanese Science and Technology** ,1988
