Ethical Decision Making In Physical Activity Research:

Ethical Decision Making in Physical Activity Research John N. Drowatzky,1996 Can scientific studies that expose subjects to potentially harmful situations be justified if the subjects are volunteers Should students be required to participate as subjects in research projects developed to benefit their professors Can a single set of ethical rules apply to all research situations These and other questions come under scrutiny in Ethical Decision Making in Physical Activity Research Written by a lawyer and physical educator this book explores the important relationship between ethics and the research process The book begins with a discussion of the scientific method and basic parameters of ethical behavior then focuses on ethical concerns that can arise in the following situations The selection and formation of the research question The work of institutional review boards Methodology including the use of human and animal subjects data collection and statistical analysis The presentation of results including publication Measures used to prevent fraud and misconduct Fifteen case studies highlight the text and help readers develop sensitivity toward ethical issues in research and how to think ethically Researchers can use the case studies to help them learn to identify the ethical dilemma in question determine the choices available for resolving the dilemma evaluate the ethics of the actual choice made to resolve the dilemma and decide on the most appropriate course of action The author encourages readers to consider potential ethical issues from the moment the research problem is contemplated until it has been studied and published The book also describes how to discipline fraudulent researchers and proposes how to improve ethical conduct

The Psychology Of Sport, Performance And Ethics Yair Galily, Roy David

Samuel, Gershon Tenenbaum, Edson Filho, 2021-04-12 Applied Ethics for Sport & Physical Activity Professionals Earle F. Zeigler, 2007-05-14 This text is designed to provide the sport and physical activity professional with an introduction to ethical decision making. It can apply readily to the reader's personal, professional, and environmental or societal life if such a division can be established in connection with ethics and morality in one's life pattern. In the final analysis, of course, everything is personal. Any new book being recommended for use by a great many people needs solid justification. In Applied Ethics for Sport and Physical Activity Professionals, an excellent case can be made for use of this basic multi-phased 1-2-3-4 approach to ethical decision making offered here. Faced with the prevailing ethical chaos of the early 21st century and keeping firmly in mind the vital need to preserve our individual freedom and civil liberties, it starts in a relatively simple fashion in Phase One. Actually, the three steps offered here might actually do it for the reader and for the author too in most situations. Then it moves progressively and sequentially through Phases Two, Three, and Four, that are assuredly desirable but optional. Although it says optional, it is true that using one or more of them could serve to confirm or negate the reader's Phase One decision. Interestingly and importantly, nevertheless, all four phases of this approach to ethical decision making can be carried out successfully by a reasonably intelligent person. Phase Four, a case method technique, can be pursued best in a group discussion of the issue at hand by those concerned. It is argued here, basically for several reasons, that the young person in society today is initially missing out completely on a sound experiential introduction to ethics and morality. This is true whether reference is made to that which typically takes place in the home, the school system, or the church, actually an experience that doesn't take place adequately. In fact, the truth is that typically no systematic instruction in this most important subject is offered at any time. And the author refuses to accept the often heard osmosis stance, i.e., that such knowledge is better caught than taught. In Part I, in an effort to improve the prevailing situation, the reader learns initially how this all came about, how and why such a terrible gap exists. Where previously, for many, at least a relatively strong orthodox religious indoctrination prevailed and was of some help, the situation has steadily deteriorated in our present multi-ethnic secular culture to a point where confusion reigns as to ethical conduct. See Chapters 1. This topic will be elaborated still further through a brief narrative explaining how such a confusing miasma came into existence on the topic of ethical values and problems in our society today. Chapter 2. Next, the good and the bad will be explained briefly in historical perspective. In Chapter 3, next, because this subject can become confusing unless the terms used are understood and one's reasoning is sound elementary reasoning, i.e., informal logic or critical thinking, was planned for Chapter 4, but it is now in the Appendix for ease of reference. So Chapter 4 offers now instead a quick look at six of the major ethical routes or approaches extant in today's confusing Western world scenario. Finally, in Part I, it is explained how a person's ethical outlook should be an implicit/explicit experiential approach that necessarily moves daily from personal to professional ethics. Chapter 5. In Part II, one basic philosophic approach to applied ethics, a three-step one, is offered as Phase One of a total four-phase experiential

plan that may be applied to a specific problem solving ethical situation Chapter 6 This plan of attack moves sequentially from the time proven thought of three great philosophers of the past i e proceeds from Kant to Mill to Aristotle Then a second legal or jurisprudential approach Phase Two is introduced as a possible follow up to Phase One using a four step technique This can be employed by those who wish to consolidate and support their embryonic decision making process of Phase One somewhat more with a jurisprudential law argument Chapter 7 Next in Phase Three the reader is presented with the possibility of strengthening and supplementing i e verifying his or her Phase One decision by carefully superimposing or blending the results of the three step philosophic approach onto the jurisprudential law argument developed in Phase Two Chapter 8 Finally in Phase Four if the reader wishes to carry this analytic process one step further a more detailed case method approach to ethical decision making has been added Chapter 9 Here one sample case will demonstrate the possible progression through the four phases resulting in ethical decision making of a personal nature At this point moving into Part III of the book after a brief explanatory discussion Chapters 10 11 and 12 offer a variety of ethical problems for consideration and laboratory practice It was decided to divide these ethical problems into three reasonably discrete categories 1 personal 2 professional and 3 environmental Of course we appreciate that each of these categories is personal in nature in that it would be an individual who would be making ethical decisions related to the case problems offered under each category However every effort is made through initial consideration of the nature of the ethical problem at hand to have a specific problem be 1 largely personal e g one s private sex life 2 largely professional practices e g one s professional conduct on the job or c largely environmental problems e g one s involvement in combatting environmental degradation Of course there is bound to be some overlap among these categories Exercises will be provided with each category e g professional The case situation or problem will be explained briefly but succinctly Then after a brief analysis the reader is asked to follow the same progression through the one or possibly more of the four phases resulting in the making of a defensible ethical decision The author has observed that many books of this nature propose a number of different philosophical stances often in a semi neutral fashion recommending that the reader ultimately make his or her own personal decision about which to follow In this book it was planned initially to follow this striving to stay neutral approach But then the author decided also that first he would provide an easy entry approach as well one that can be used before a person makes a final decision i e as more experience and maturation are obtained during life In addition in Part IV the author felt also that he had a responsibility to make his own position on ethical decision making known at some point see Chapter 13 He did this because he felt especially since the turbulent 1960s when most students demanded it as a right that a he owed that to you and b he felt that so called scientific ethics possibly offers the best hope for the entire world in the 21st century or as soon as possible thereafter A final brief concluding discussion Chapter 14 will urge the reader to follow through and to take it from this point in your own personal professional and public life The need for critical evaluation will be stressed as he she strives to form an evolving possibly

fluid basis for sound ethical decision making in what are bound to be difficult years ahead in the 21st century If time is of the essence in the resolution of a pressing ethical problem of either a person or professional nature you may well decide that Phases No 2 3 and 4 which can be considered as optional are not absolutely necessary for y

The Research Process in Sport, Exercise and Health Rich Neil, Sheldon Hanton, Scott Fleming, Kylie Wilson, 2013-12-04 What are the challenges and potential pitfalls of real research What decision making process is followed by successful researchers The Research Process in Sport Exercise and Health fills an important gap in the research methods literature Conventional research methods textbooks focus on theory and descriptions of hypothetical techniques while the peer reviewed research literature is mainly concerned with discussion of data and the significance of results In this book a team of successful researchers from across the full range of sub disciplines in sport exercise and health discuss real pieces of research describing the processes they went through the decisions that they made the problems they encountered and the things they would have done differently As a result the book goes further than any other in bringing the research process to life helping students identify potential issues and problems with their own research right at the beginning of the process The book covers the whole span of the research process including identifying the research problem justifying the research question choosing an appropriate method data collection and analysis identifying a study s contribution to knowledge and or applied practice disseminating results Featuring real world studies from sport psychology biomechanics sports coaching ethics in sport sports marketing health studies sport sociology performance analysis and strength and conditioning the book is an essential companion for research methods courses or dissertations on any sport or exercise degree programme
