Stoeger**

Ethical Issues In Human Cloning Crossdisciplinary Perspectives:

Ethical Issues in Human Cloning Michael C. Brannigan, 2001 Publisher Fact Sheet An compelling overview by experts such as Stephen Jay Gould Andrea Dworkin of the scientific religious philosophical legal arguments for against human cloning National marketing campaign including advertising in New York Review of Books Lingua Franca **Cross-cultural Issues in Bioethics** Heiner Roetz, 2006 Human cloning is a main focus of current bioethical discussion Involving the self understanding of the human species it has become one of the most debated topics in biomedical ethics not only on the national but also on the international level This book brings together articles by bioethicists from several countries who address questions of human cloning within the context of different cultural religious and regional settings against the background of globalizing biotechnology It explores on a cross cultural level the problems and opportunities of global bioethics *Cloning* Stephen D. Fairbanks, 2004 The terms recombinant DNA technology DNA cloning molecular cloning or gene cloning all refer to the same process the transfer of a DNA fragment of interest from one organism to a self replicating genetic element such as a bacterial plasmid The DNA of interest can then be propagated in a foreign host cell This technology has been around since the 1970s and it has become a common practice in molecular biology labs today Reproductive cloning is a technology used to generate an animal that has the same nuclear DNA as another currently or previously existing animal Dolly was created by reproductive cloning technology In a process called somatic cell nuclear transfer SCNT scientists transfer genetic material from the nucleus of a donor adult cell to an egg whose nucleus and thus its genetic material has been removed The reconstructed egg containing the DNA from a donor cell must be treated with chemicals or electric current in order to stimulate cell division Once the cloned embryo reaches a suitable stage it is transferred to the uterus of a female host where it continues to develop until birth Therapeutic cloning also called embryo cloning is the production of human embryos for use in research The goal of this process is not to create cloned human beings but rather to harvest stem cells that can be used to study human development and to treat disease Stem cells are important to biomedical researchers because they can be used to generate virtually any type of specialised cell in the human body This new book presents an up to date Chronology of Cloning along with current and selected abstracts dealing with cloning as well as a guide to books on the topic Access to the abstract and books sections is provided by title subject and author indexes

Human Dignity and Human Cloning Silja Vöneky, Rüdiger Wolfrum, 2013-12-01 Human Dignity and Human Cloning contains contributions by philosophers theologians and lawyers on legal and ethical questions concerning the reproductive and therapeutic cloning of human beings The main focus lies on the admissibility of cloning in German Constitutional law as well as in public international law As these legal questions cannot be answered without taking account of the ethical discussion the topic is analyzed from different cultural and religious viewpoints The Ethics of Protocells Mark Bedau, Emily C. Parke, 2009 Teams of scientists around the world are racing to create protocells microscopic self organizing

entities that spontaneously assemble from simple organic and inorganic materials The creation of fully autonomous protocells a technology that can for all intents and purposes be considered literally alive is only a matter of time This book examines the pressing social and ethical issues raised by the creation of life in the laboratory Protocells might offer great medical and social benefits and vast new economic opportunities but they also pose potential risks and threaten cultural and moral norms against tampering with nature and playing God The Ethics of Protocells offers a variety of perspectives on these concerns

The Routledge Companion to Religion and Science James W. Haag, Gregory R. Peterson, Michael L. Spezio, 2012-03-12

The field of religion and science is one of the most exciting and dynamic areas of research today This Companion brings together an outstanding team of scholars to explore the ways in which science intersects with the major religions of the world and religious naturalism The collection provides an overview of the field and also indicates ways in which it is developing Its multicultural breadth and scientific rigor on topics that are and will be compelling issues in the first part of the twenty first century and beyond will be welcomed by students and scholars alike

Ethics and Emerging Technologies

Ronald Sandler, 2016-04-30 First and only undergraduate textbook that addresses the social and ethical issues associated with a wide array of emerging technologies including genetic modification human enhancement geoengineering robotics virtual reality artificial meat neurotechnologies information technologies nanotechnology sex selection and more

The Fulbright Brainstorms on Bioethics Arthur L. Caplan, 2006

Encyclopedia of Death and the Human Experience Clifton D. Bryant, Dennis L. Peck, 2009-07-15 Death and dying and death related behavior involve the causes of death and the nature of the actions and emotions surrounding death among the living Interest in the varied dimensions of death and dying has led to the development of death studies that move beyond medical research to include behavioral science disciplines and practitioner oriented fields As a result of this interdisciplinary interest the literature in the field has proliferated This two volume resource addresses the traditional death and dying related topics but also presents a unique focus on the human experience to create a new dimension to the study of death and dying With more than 300 entries the Encyclopedia of Death and the Human Experience includes the complex cultural beliefs and traditions and the institutionalized social rituals that surround dying and death as well as the array of emotional responses relating to bereavement grieving and mourning The

Encyclopedia is enriched through important multidisciplinary contributions and perspectives as it arranges organizes defines and clarifies a comprehensive list of death related perspectives concepts and theories Key Features Imparts significant insight into the process of dying and the phenomenon of death Includes contributors from Asia Africa Australia Canada China eastern southern and western Europe Iceland Scandinavia South America and the United States who offer important interdisciplinary and cross cultural perspectives Provides a special focus on the cultural artifacts and social institutions and practices that constitute the human experience Addresses death related terms and concepts such as angel makers equivocal death end of life decision making near death experiences cemeteries ghost photography halo nurses caregiver stress cyberfunerals global religious beliefs and traditions and death denial Presents a selective use of figures tables and images Key Themes Arts Media and Popular Culture Perspectives Causes of Death Conceptualization of Death Dying and the Human Experience Coping With Loss and Grief The Human Experience Cross Cultural Perspectives Cultural Determined Social Oriented and Violent Forms of Death Developmental and Demographic Perspectives Funerals and Death Related Activities Legal Matters Process of Dying Symbolic Rituals Ceremonies and Celebrations of Life Theories and Concepts Unworldly Entities and Events With an array of topics that include traditional subjects and important emerging ideas the Encyclopedia of Death and the Human Experience is the ultimate resource for students researchers academics and others interested in this intriguing area of study

What We Talk About When We Talk About Clone Club Gregory E. Pence, 2016-03-29 What is the real world history and science of human cloning and does Orphan Black get it right Can you own a person even a cloned one How can Sarah Manning be straight Cosima gay and Tony trans Cult hit sci fi show Orphan Black doesn't just entertain it also raises fascinating questions about human cloning its ethics and its impact on personal identity In *What We Talk About When We Talk About Clone Club* Bioethics and Philosophy in Orphan Black prominent bioethicist Gregory E Pence violates Clone Club's first rule to take us deeper into the show and its connections to the real world including Widespread myths about human clones and Orphan Black's rejection of them Our ugly history of eugenics The ethics of human experimentation by way of Projects Castor and Leda What we can learn about clones and identity from twin studies and tensions among Orphan Black's clone sisters Kendall Malone and other genetic anomalies The brave new world of genetic enhancement and clonal dynasties and how Helena and Kira Manning fit in In the process *What We Talk About When We Talk About Clone Club* reveals why Orphan Black is some of today's most engaging and thought provoking television

The Ethics of Nature Celia Deane-Drummond, 2008-04-15 This accessible and timely book uses a Christian perspective to explore ethical debates about nature A detailed exploration of humanity's treatment of the natural world from a Christian perspective Covers a range of ethical debates including current controversies about the environment animal rights biotechnology consciousness and cloning Sets the immediate issues in the context of underlying theological and philosophical assumptions Complex scientific issues are explained in clear student friendly language The author develops her own distinctive ethical approach centred on

the practice of wisdom Discusses key figures in the field including Peter Singer Aldo Leopold Tom Regan Andrew Linzey James Lovelock Anne Primavesi Rosemary Radford Ruether and Michael Northcott The author has held academic posts in both theology and plant science *Sustainable Farmland Management* S. Seymour, M. Steven, 2008 Examining the relationship between sustainability and farmland management in differing temporal spatial and production contexts this book considers farmland multifunctionality systems and systemic thinking the debates over information knowledge and ethical aspects

On Cloning John Harris, 2004-07-31 Cloning few words have as much potential to grip our imagination or grab the headlines No longer the stuff of science fiction or Star Wars it is happening now Yet human cloning is currently banned throughout the world and therapeutic cloning banned in many countries In this highly controversial book John Harris does a lot more than ask why we are so afraid of cloning He presents a deft and informed defence of human cloning carefully exposing the rhetorical and highly dubious arguments against it He begins with an introduction to what a human clone is before tackling some of the most common and frequently bizarre criticisms of cloning Is it really wicked Can we regulate it What about the welfare of cloned children Does it turn human beings into commodities Dismissing one by one some of the myths about human cloning in particular that it is degrading and unsafe he astutely argues that some of our most cherished values such as the freedom to start a family and the freedom from state control actually support the case for human cloning Offering a brave and lucid insight into this ethical minefield John Harris at last shows that far from ending the diversity of human life or creating a race of super clones cloning has the power to improve and heal human life

Science in the Contemporary World Eric G. Swedin, 2005-03-08 This work is a unique introductory A Z resource detailing the scientific achievements of the contemporary world and analyzing the key scientific trends discoveries and personalities of the modern age An authoritative reference survey of the modern age of scientific discovery Science in the Contemporary World is a scholarly yet accessible chronicle of scientific achievement from the discovery of penicillin to the latest developments in space exploration and cloning Over 200 A Z entries cover the full spectrum of contemporary science with emphasis on its diverse nature Within the last 50 years medicine has eradicated the killer disease smallpox but primarily because the virus can live only in humans Space probes have revealed that on Europa a moon of Jupiter an ice capped ocean with the potential to support life probably exists Marvels from animal psychology and deep sea exploration are also explored extensively

Rewriting Crusoe Jakub Lipski, 2020-09-17 Published in 1719 Defoe's Robinson Crusoe is one of those extraordinary literary works whose importance lies not only in the text itself but in its persistently lively afterlife German author Johann Gottfried Schnabel who in 1731 penned his own island narrative coined the term Robinsonade to characterize the genre bred by this classic and today hundreds of examples can be identified worldwide This celebratory collection of tercentenary essays testifies to the Robinsonade's endurance analyzing its various literary aesthetic philosophical and cultural implications in historical context Contributors trace the Robinsonade's roots from the eighteenth century to generic affinities in later

traditions including juvenile fiction science fiction and apocalyptic fiction and finally to contemporary adaptations in film television theater and popular culture Taken together these essays convince us that the genre s adapt ability to changing social and cultural circumstances explains its relevance to this day Published by Bucknell University Press Distributed worldwide by Rutgers University Press

Human Molecular Genetics Jamie Benton &,2019-01-23 Molecular Genetics is one of the fast moving fields of science that has undergone a variable revolution over the last two decades leading to major advances in the understanding of gene structure and function at molecular level Human Molecular Genetics is the study of the molecular basis of human genetic disease developmental genetics neurogenetics chromosome structure and function molecular aspects of cancer genetics gene therapy biochemical genetics major advances in gene mapping and understanding of genome organization Genetics is the study of how genes bring about characteristics or traits in living things and how those characteristics are inherited Genes are portions of DNA molecules that determine characteristics of living things Through the processes of meiosis and reproduction genes are transmitted from one generation to the next Heredity is a biological process where a parent passes certain genes onto their children or offspring Genetics uses information from one or two genes to explain a disease or condition whereas genomics examines all of the genetic information to determine biological markers predisposing an individual to disease Genes are the best understood subsequence of DNA code Most genes clearly encode the data sequence representing a particular protein However all of the genes together are only a small part of DNA code The 30 000 odd genes in human DNA might only make up 4% of human DNA This book presents a view in depth of the principal aspects of life science Each chapter treats a discrete topic within the scope of biology and each is designed for students who are exposed to the topics for the first time Since considerable ferment exists in the biological sciences today it is increasingly important to keep pace with current developments

Encountering Life in the Universe Chris Impey,Anna H. Spitz,William Stoeger,2013-10-17 *Encountering Life in the Universe* examines the intersection of scientific research and society to determine the philosophy and ethics of relating to the Earth and beyond

Magical Progeny, Modern Technology Swasti Bhattacharyya,2012-02-01 *Magical Progeny Modern Technology* examines Hindu perspectives on assisted reproductive technology through an exploration of birth narratives in the great Indian epic the Mah bh rata Reproductive technology is at the forefront of contemporary bioethical debates and in the United States often centers on ethical issues framed by conflicts among legal scientific and religious perspectives Author Swasti Bhattacharyya weaves together elements from South Asian studies religion literature law and bioethics as well as experiences from her previous career as a nurse to construct a Hindu response to the debate Through analysis of the mythic stories in the Mah bh rata specifically the birth narratives of the five Pava brothers and their Kaurava cousins she draws out principles and characteristics of Hindu thought She broadens the bioethical discussions by applying Hindu perspectives to a California court case over the parentage of a child conceived through reproductive technology and compares specific Hindu and Roman Catholic attitudes toward assisted reproductive

technology Magical Progeny Modern Technology provides insightful ways to explore ethical issues and highlights concerns often overlooked in contemporary discussions occurring within the United States **Taking Sides : Clashing Views on Moral Issues** Stephen Satris,2008
