Kizza, 2007-06-02 Since the publication of the first edition in 1997 there have been tremendous changes in the fields of computer science and information sciences During this period we have become more dependent than ever before on computer and telecommunication technology As we both individually and as nations become more dependent on cyberspace technology it has itself become a critical component of individual nation's security infrastructures that control power grids gas and oil storage facilities transportation and all forms of national communication including emergency services The recent rise in cyber attacks many of them with lightning speed affecting millions of computers worldwide and causing billions of dollars in losses both to individuals and businesses is an indication of how unprepared we are to handle such attacks not only today but also in the future Such attacks are a mark of the poor state of our cyberspace security policies The facts that there are no signs to indicate there is going to be a slowdown in such attacks and that nations are not doing anything worth calling preventive has heightened the need for an effective strategy
