In the Name of Science F. Barbara Orlans, 1993-07-08 Few arguments in biomedical experimentation have stirred such heated debate in recent years as those raised by animal research In this comprehensive analysis of the social political and ethical conflicts surrounding the use of animals in scientific experiments Barbara Orlans judges both ends of the spectrum in this debate unconditional approval or rejection of animal experimentation to be untenable Instead of arguing for either view she thoughtfully explores the ground between the extremes and convincingly makes the case for public policy reforms that serve to improve the welfare of laboratory animals without jeopardizing scientific endeavor This book presents controversial issues in a balanced manner based on careful historical analysis and original research Different mechanisms of oversight for animal experiments are compared and those that have worked well are identified This compelling work will be of interest to biomedical scientists ethicists animal welfare advocates and other readers concerned with this critical issue

Swanson,1992 **Animals as Biotechnology** Richard Twine,2010-09-23 In Animals as Biotechnology sociologist Richard Twine places the question of human animal relations at the heart of sustainability and climate change debates The book is shaped by the emergence of

two contradictory trends within our approach to nonhuman animals the biotechnological turn in animal sciences which aims to increase the efficiency and profitability of meat and dairy production and the emerging field of critical animal studies mostly in the humanities and social sciences which works to question the nature of our relations with other animals The first part of the book focuses on ethics examining critically the dominant paradigms of bioethics and power relations between human and non human The second part considers animal biotechnology and political economy examining commercialisation and regulation The final part of the book centres on discussions of sustainability limits and an examination of the prospects for animal ethics if biotechnology becomes part of the dominant agricultural paradigm Twine concludes by considering whether growing calls to reduce our consumption of meat dairy products in the face of climate change threats are in fact complicit with an anthropocentric understanding of sustainability and that what is needed is a more fundamental ethical and political questioning of relations and distinctions between humans animals and nature
