Ethics The Management Of Computer Technology:

Ethics and the Management of Computer Technology W. Michael Hoffman, Jennifer Mills Moore, 1982 **Ethics of Computing** Jacques J. Berleur, Klaus Brunnstein, 2016-01-09 This major reference work represents the first attempt to confront on a world wide basis the way computer associations face up to their own responsibilities in an age increasingly dominated by information and communication technology The book deals with the codes of ethics and conduct and related issues It is the first book to deal with homogenous codes namely codes of national computer societies Some thirty codes are compared and analysed in depth To put these into perspective there are discussion papers covering the methodological philosophical and organisational issues *Handbook of Research on Technoethics* Luppigini, Rocci, Adell, Rebecca, 2008-08-31 This book traces the emergence of the new interdisciplinary field of technoethics by exploring its conceptual development important issues and key areas of current research Compiling 50 authoritative articles from leading researchers on the ethical dimensions of new technologies Provided by publisher Readings in Cyberethics Richard A. Spinello, Herman T. Tavani, 2004 This book of readings is a flexible resource for undergraduate and graduate courses in the evolving fields of computer and Internet ethics Each selection has been carefully chosen for its timeliness and analytical depth and is written by a well known expert in the field The readings are organized to take students from a discussion on ethical frameworks and regulatory issues to a substantial treatment of the four fundamental interrelated issues of cyberethics speech property privacy and security A chapter on professionalism rounds out the selection This book makes an excellent companion to *CyberEthics Morality and Law in Cyberspace Third Edition* by providing articles that present both sides of key issues in cyberethics **Standards and Audits for Ethics Management Systems** Josef Wieland, 2013-03-14 The articles collected in this volume deal with the contents and processes of good corporate practice Their common question is how moral values and ethical demands can become an integral part of economic and corporate decisions in a way that is credible and comprehensible for the society Generally accepted best practice or minimum requirements for codes of conduct matter in this context They codify values like integrity fairness openness honesty truthfulness solidarity and justice which have to be implemented in a company's day to day business In one sentence There is a need to develop criteria for seriousness and credibility for evaluating and controlling standards of conduct and the managerial systems created for this purpose In the international arena terms like Ethics management system Ethics program Values program Ethics audit and Social audit are in use to denote these management systems In this context it seems to me that the European perspective results from the values driven integration of corporate governance e.g. risk management compliance quality management e.g. human capital supply chain and corporate citizenship human rights ecology social responsibility community into a comprehensive and consistent management decision system The core value and common denominator of these areas is sustainability This for instance as opposed to narrow compliance programs that are largely law driven to use a distinction which Lynn S Paine
