Ethics And Urban Design:

Ethics and Urban Design Gideon S. Golany, 1995-08-01 The city according to urban design scholar Gideon Golany is the largest and most complicated project ever produced by humankind. In *Ethics and Urban Design* he challenges design professionals to reexamine their basic assumptions about the urban environment and offers design strategies based on enduring human values. In search of answers to the paradoxical problems of the modern city, Golany takes the reader through the sweep of human settlements from the dawn of civilization to the present. His authoritative examination of the genesis of the city is illuminated by instructive examples of early urban centers: Mesopotamia, the Indus River Valley, the Egyptian cities of the Nile, and the capital cities of ancient China. All are examined in the light of what made them work as major centers of human activity. What Golany finds in the success stories of the past are cohesive sociocultural values that shaped the design of homes, neighborhoods, and cities. These ethical values helped to maintain an equilibrium within the society that permeated its natural, social, and human-made environments. In the present era, conversely, he finds a major disconnection between human values and the ethics of technology, which has resulted in confusion, imbalance, and dehumanization. To help designers gain a perspective on possible solutions, Golany explains leading comprehensive design strategies, including the valley theory, the urban border zone concept, and the regional concept of Patrick Geddes. In the case study of contemporary Holland, he details what a small, densely populated country has been able to achieve through design planning rooted in environmental ethics. *Future Frontiers for Urban Design*, the culminating section of this groundbreaking book, opens with Golany's vision of the future city. He examines the issues of thermal performance and climate as they relate to urban design and offers the concept of geospace, the earth-enveloped habitat. Buttressing his presentation with detailed information on the mechanics of geospace, Golany describes case studies of the successful use of earth-enveloped habitats in China and Tunisia. He makes a powerful argument for the geospace city as a renewal of ancient traditions that can restore the vital equilibrium between nature and human settlements that we seem to have lost. *Ethics and Urban Design* is a distinguished scholar's analysis and prescription for the city; it offers an abundance of stimulating ideas for the architects, designers, and planners who have assumed responsibility for its future. *Ethics and Urban Design* draws on historical examples and contemporary case studies from around the world to illustrate urban design strategies that can help restore equilibrium to the natural, social, and built environments of the city. In this stimulating book, urban design scholar Gideon Golany offers architects, designers, and planners both an in-depth analysis of the fundamental issues of urban design and practical options for the design of the future city. Examines the genesis and development of the city from the earliest settlements to the rise of urban society. Presents urban design strategies based on historical examples of early urban centers, including Mesopotamia, the Indus River Valley, Egypt, and China. Offers case studies of environmental success stories from Europe, Asia, and Africa. Details geospace design options, the use of underground space for diversified land use, housing, and transportation. Fully illustrated with over 80 photographs.

Urban Ethics Under Conditions Of Crisis: Politics, Architecture, Landscape Sustainability And Multidisciplinary Engineering Konstantinos Moraitis, Stamatina Th Rassia, 2019-03-20 Urban Ethics under Conditions of Crisis investigates the states of urban planning architectural design sustainability landscape architecture and engineering and examines their correlation with social attitudes and dispositions that can impact on socio cultural and political engagement internationally in conditions of crisis

The theme of the book emphasizes the need to acknowledge the controversial character of contemporary social life under critical social conditions in correlation with urban space. It concerns the evaluation of critical issues such as *Urban Ethics in the Anthropocene* Jeffrey K.H. Chan, 2018-07-03. Increasingly we live in an environment of our own making a world as design over the natural world. For more than half of the global population this environment is also thoroughly urban. But what does a global urban condition mean for the human condition? How does the design of the city and the urban process in response to the issues and challenges of the Anthropocene produce new ethical categories, shape new moral identities and relations and bring about consequences that are also morally significant? In other words, how does the urban shape the ethical and in what ways? Conversely, how can ethics reveal relations and realities of the urban that often go unnoticed? This book marks the first systematic study of the city through the ethical perspective in the context of the Anthropocene. Six emergent urban conditions are examined: namely precarity, propinquity, conflict, serendipity, fear, and the urban commons.

Design and Ethics Emma Felton, Oksana Zelenko, Suzi Vaughan, 2013-06-19. The value of design for contributing to environmental solutions and a sustainable future is increasingly recognised. It spans many spheres of everyday life and the ethical dimension of design practice that considers environmental, social and economic sustainability is compelling. Approaches to design recognise design as a practice that can transform human experience and understanding, expanding its role beyond stylistic enhancement. The traditional roles of design, designer and designed object are therefore redefined through new understanding of the relationship between the material and immaterial aspects of design, where the design product and the design process are embodiments of ideas, values and beliefs. This multi-disciplinary approach considers how to create design which is at once aesthetically pleasing and also ethically considered, with contributions from fields as diverse as architecture, fashion, urban design and philosophy. The authors also address how to teach design-based subjects while instilling a desire in the student to develop ethical work practices both inside and outside the studio.

Autonomous Vehicle Ethics Ryan Jenkins, David Cerný, Tomás Hríbek, 2022. This book represents a substantial and purposeful effort to move the academic discussion beyond the trolley problem to the broader ethical, legal and social implications that autonomous vehicles present. There are still urgent questions waiting to be addressed: for example, how AVs might interact with human drivers in mixed or hybrid traffic environments; how AVs might reshape our urban landscapes; what unique security or privacy concerns are raised by AVs as connected devices in the Internet of Things; how the benefits and burdens of this new technology, including mobility, traffic congestion and pollution, will be distributed throughout society and more.

The Ethics of a Potential Urbanism Camillo Boano, 2016-11-25. *The Ethics of a Potential Urbanism* explores the possible and potential relevance of Giorgio Agamben's political thoughts and writings for the theory and the practice of architecture and urban design. It sketches out the potentiality of Agamben's politics which can affect change in current architectural and design discourses. The book investigates the possibility of an inoperative architecture as an ethical shift for a different practice, just a little bit.

different but able to deactivate the sociospatial dispositive and mobilize a new theory and a new project for the urban now to come This particular reading from Agamben's oeuvre suggests a destituent mode of both thinking and practicing of architecture and urbanism that could possibly redeem them from their social emptiness cultural irrelevance economic reductionism and proto avant garde extravagance contributing to a renewed critical encounter with architecture's aesthetic political function

Transforming food systems: ethics, innovation and responsibility Donald Bruce, Ann Bruce, 2023-08-14

Feeding the world's growing population in ways that are effective ethical and socially just and protect the natural systems on which all life depends is one of the greatest challenges facing humanity It forms the theme of this book of papers of the 2022 Edinburgh conference of the European Society for Agricultural and Food Ethics EURSAFE The dramatic increases in the cost of energy scarcities in resources and people stemming from the COVID 19 pandemic and international conflict have brought home the vulnerability of our interlinked human systems at all levels Climate change poses deeper longer term threats Global competition drives fine tuned and efficient systems but time proven local practices may show better resilience in such uncertain futures The book reflects the sheer diversity of approaches and responses to these challenges across a wide range of academic disciplines provoking us to look at the issues in new ways They reflect the varied standpoints of producers retailers regulators farmers vets communities and citizens The challenge to reach net zero carbon is addressed in papers assessing livestock systems grasslands land use and rewilding food choices meat eating and alternatives Innovations such as genome editing uses of seaweed and the use of data pose both possibilities and challenges Animal ethics is a prominent theme with a range of papers on animal human relations animal use in research and veterinary ethics

Planning for Equitable Urban Agriculture in the United States Samina Raja, Marcia Caton Campbell, Alexandra Judelsohn, Branden Born, Alfonso Morales, 2024-03-19

This open access book building on the legacy of food systems scholar and advocate Jerome Kaufman examines the potential and pitfalls of planning for urban agriculture UA in the United States especially in how questions of ethics and equity are addressed The book is organized into six sections Written by a team of scholars and practitioners the book covers a comprehensive array of topics ranging from theory to practice of planning for equitable urban agriculture Section 1 makes the case for re imagining agriculture as central to urban landscapes and unpacks why how and when planning should support UA and more broadly food systems Section 2 written by early career and seasoned scholars provides a theoretical foundation for the book Section 3 written by teams of scholars and community partners examines how civic agriculture is unfolding across urban landscapes led largely by community organizations Section 4 written by planning practitioners and scholars documents local government planning tied to urban agriculture focusing especially on how they address questions of equity Section 5 explores UA as a locus of pedagogy of equity Section 6 places the UA movement in the US within a global context and concludes with ideas and challenges for the future The book concludes with a call for planning as public nurturance an approach that can be illustrated through urban agriculture Planning as public nurturance is

a value explicit process that centers an ethics of care especially protecting the interests of publics that are marginalized It builds the capacity of marginalized groups to authentically co design and participate in planning policy processes Such a planning approach requires that progress toward equitable outcomes is consistently evaluated through accountability measures And finally such an approach requires attention to structural and institutional inequities Addressing these four elements is more likely to create a condition under which urban agriculture may be used as a lever in the planning and development of more just and equitable cities This is an open access book This is an open access book Water Ethics David Groenfeldt, 2013-10-01 This book introduces the idea that ethics are an intrinsic dimension of any water policy program or practice and that understanding what ethics are being acted out in water policies is fundamental to an understanding of water resource management Thus in controversies or conflicts over water resource allocation and use an examination of ethics can help clarify the positions of conflicting parties as preparation for constructive negotiations The author shows the benefits of exposing tacit values and motivations and subjecting these to explicit public scrutiny where the values themselves can be debated The aim of such a process is to create the proverbial level playing field where values favoring environmental sustainability are considered in relation to values favoring short term exploitation for quick economic stimulus the current problem or quick protection from water disasters through infrastructure which science suggests is not sustainable The book shows how new technologies such as drip irrigation or governance structures such as river basin organizations are neither good nor bad in their own right but can serve a range of interests which are guided by ethics A new ethic of coexistence and synergies with nature is possible but ultimately depends not on science law or finances but on the values we choose to adopt The book includes a wide range of case studies from countries including Australia India Philippines South Africa and USA These cover various contexts including water for agriculture urban domestic and industrial use the rights of indigenous people and river watershed and ecosystem management **Ethics and Integrity in Research with Children and Young**

People Grace Spencer, 2021-11-04 This international and multi disciplinary edited collection unpacks some of the ethical complexities of conducting research with children and young people The chapters in the volume offer an applied perspective to navigating contemporary and complicated ethical issues that can arise in the field of childhood and youth centred research

Ethics of the Urban Mohsen Mostafavi, Harvard University. Graduate School of Design, 2017 In times where global matters such as the climate currencies and places of residence become increasingly volatile the urban public space we live in is an area where power identity and belonging are negotiated Cities have always been melting pots of history society art and politics which is why the way a city is shaped tells us a lot about the people who live in it With contributors from a variety of fields *Ethics of the Urban* discusses these urban spaces of the political How do we move about the city How does memory of the past inspire the future of cities and What makes a city a home are only some of the many questions that *Ethics of the Urban* addresses The publication gathers experts from history sociology art political theory planning law and design to

emphasize the complexity of the meaning that urban space has today Urban spaces are on one hand political spaces since buildings streets and people moving around all mirror political decisions in one way or another On the other hand the urban space is also a designed space conceptualized planned and sometimes gentrified Complimented by stunning photography Ethics of the Urban is a vibrant intellectual journey straight into the bone marrow of every contemporary city around the globe from publisher s website *Teaching Design For Values* Roberto Rocco,Amy Thomas,María

Novas-Ferradás,2022-12-08 The process of identifying interpreting and implementing societal values in university education is an essential part of responsible innovation and designing for equitable inclusive and sustainable societies While there is now a well defined and growing body of research on the theory and application of designing for values or value sensitive design at present the pedagogical dimension remains underexplored Teaching Design for Values A Companion is a resource for teachers of design based disciplines who wish to foreground values more explicitly in their classes With fourteen chapters written by both TU Delft educators and international contributors the book aims to examine the concepts methods and experiences of teaching design for values within a variety of fields including urbanism engineering architecture artificial intelligence and industrial design Through its multi disciplinary Teaching Design for Values proposes an expanded definition of design to encompass a broad range of disciplines and processes that deal generally with future imagining and future building including process management In doing so it explores the ways that values may be expressed and analysed in a variety of different pedagogical contexts **Technoethics and the Evolving Knowledge Society: Ethical Issues in**

Technological Design, Research, Development, and Innovation Luppicipini, Rocci,2010-01-31 This book introduces the reader to the key concepts and issues that comprise the emerging field of Technoethics the interdisciplinary field concerned with all ethical aspects of technology within a society shaped by technology Provided by publisher **Planning Cities in**
