Eugenics Human Genetics And Human Failings:

Eugenics, Human Genetics and Human Failings Pauline Mazumdar, 2005-12-20 This scholarly and penetrating study of eugenics is a major contribution to our understanding of the complex relation between science ideology and class The Oxford Handbook of the History of Eugenics Alison Bashford, Philippa Levine, 2010-09-24 Eugenic thought and practice swept the world from the late nineteenth to the mid twentieth century in a remarkable transnational phenomenon that informed social and scientific policy across the political spectrum from liberal welfare measures in emerging social democratic states to feminist ambitions for birth control to public health campaigns to totalitarian dreams of the perfectibility of man This book dispels for uninitiated readers the automatic and apparently exclusive link between eugenics and the Holocaust the popularity of eugenics in Japan for example comes as a surprise It is the first world history of eugenics and an indispensable core text for both teaching and research in what has become a sprawling but ever more important field **Reader's Guide to the History of Science** Arne Hessenbruch, 2013-12-16 The Reader's Guide to the History of Science looks at the literature of science in some 550 entries on individuals Einstein institutions and disciplines Mathematics general themes Romantic Science and central concepts Paradigm and Fact The history of science is construed widely to include the history of medicine and technology as is reflected in the range of disciplines from which the international team of 200 contributors are drawn *Species and Specificity* Pauline M. H. Mazumdar, 2002-07-18 An account of scientific disputes over the core problems of research and practice in immunology Bred for Perfection Margaret E. Derry, 2003-11-11 How did animal breeding emerge as a movement Who took part and for what reasons How do the pedigree and market systems work What light might the movement shed on the assumptions behind human eugenics In *Bred for Perfection* Margaret Derry provides the most comprehensive and accessible book yet published on the human quest to improve and develop livestock Derry herself a breeder and trained historian of science explores the triangle of genetics eugenics and practical breeding focusing on Shorthorn cattle show dogs and working dogs and one type of purebred horse the Arabian By examining specific breeders and the animals they produced she illuminates the role of technology genetics culture and economics in the system of purebred breeding *Bred for Perfection* also provides the historical context in which this system arose adding to our understanding of how domestication works and how our welfare since the dawn of time has been intertwined with the lives of animals **Margaret Sanger's Eugenic Legacy** Angela Franks, 2014-12-24 Margaret Sanger the American birth control and population control advocate who founded Planned Parenthood stands like a giant among her contemporaries With her dominating yet winning personality she helped generate shifts of opinion on issues that were not even publicly discussed prior to her activism while her leadership was arguably the single most important factor in achieving social and legislative victories that set the parameters for today's political discussion of family planning funding population control aid and even sex education This work addresses Sanger's ideas concerning birth control eugenics population control and sterilization

against the backdrop of the larger eugenic context *The Pseudoscience Wars* Michael D. Gordin, 2024-05-31 Properly analyzed the collective mythological and religious writings of humanity reveal that around 1500 BC a comet swept perilously close to Earth triggering widespread natural disasters and threatening the destruction of all life before settling into solar orbit as Venus our nearest planetary neighbor Sound implausible Well from 1950 until the late 1970s a huge number of people begged to differ as they devoured Immanuel Velikovsky's major best seller *Worlds in Collision* insisting that perhaps this polymathic thinker held the key to a new science and a new history Scientists on the other hand assaulted Velikovsky's book his followers and his press mercilessly from the get go In *The Pseudoscience Wars* Michael D Gordin resurrects the largely forgotten figure of Velikovsky and uses his strange career and surprisingly influential writings to explore the changing definitions of the line that separates legitimate scientific inquiry from what is deemed bunk and to show how vital this question remains to us today Drawing on a wealth of previously unpublished material from Velikovsky's personal archives Gordin presents a behind the scenes history of the writer's career from his initial burst of success through his growing influence on the counterculture heated public battles with such luminaries as Carl Sagan and eventual eclipse Along the way he offers fascinating glimpses into the histories and effects of other fringe doctrines including creationism Lysenkoism parapsychology and more all of which have surprising connections to Velikovsky's theories Science today is hardly universally secure and scientists seem themselves beset by critics denialists and those they label pseudoscientists as seen all too clearly in battles over evolution and climate change *The Pseudoscience Wars* simultaneously reveals the surprising Cold War roots of our contemporary dilemma and points readers to a different approach to drawing the line between knowledge and nonsense ***Understanding Central Europe*** Marcin Moskalewicz, Wojciech

Przybylski, 2017-11-20 Central Europe is a vague and ambiguous term more to do with outlook and a state of mind than with a firmly defined geographical region In the immediate aftermath of the collapse of the Iron Curtain Central Europeans considered themselves to be culturally part of the West which had been politically handicapped by the Eastern Soviet bloc More recently and with European Union membership Central Europeans are increasingly thinking of themselves as politically part of the West but culturally part of the East This book with contributions from a large number of scholars from the region explores the concept of Central Europe and a number of other political concepts from an openly Central European perspective It considers a wide range of issues including politics nationalism democracy and the impact of culture art and history Overall the book casts a great deal of light on the complex nature of Central Europe *Aldous Huxley* Harold Bloom, Sterling Professor of Humanities Harold Bloom, 2010 A collection of critical essays on Huxley his satires and fiction works with a chronology of events in the author's life *Crafting Humans* Marius Turda, 2013-03-12 Crafting humans and its corollary human enhancement is a contested topic both in medical sciences and the humanities With continuing advances in science and technology scientists and the general public alike are aware that the basic foundations of the human condition

are now at stake This volume contributes to this growing body of work It offers insights into some of the reflections and imaginaries that have inspired and legitimated both theoretical and practical programmes for crafting humans ranging from the religious spiritualist and the philosophical cultural to the secular and the scientific scientific from the religious and mystical quest for human perfection to the biopolitical eugenic state of the twentieth century and current theories of human enhancement This volume discusses these topics in a synchronized way as interrelated variants of the most central story in history that of human perfectibility

The American Religious Debate Over Birth Control, 1907-1937 Kathleen A. Tobin, 2017-07-06 The ongoing debates on the morality of artificial birth control sparked a heated public debate in the early twentieth century in an already religiously fragmented United States Many denominations took part in the deliberations both publicly and privately In examining the ideas about contraception and birth control at that time this book considers the cultural environment religion and its connection to the roots of birth control the questioning of religious doctrine the Protestants view of birth control the Lambeth conferences of 1930 the influence of conservatives and the influence of Catholics Also discussed is the historical context of fundamentalists versus modernists neo Malthusianism eugenics immigration the movement for legalization organized by Margaret Sanger and how the Catholic Church came to lead religious resistance to artificial birth control

A History of British Eugenics since 1865 David Redvaldsen, 2024-11-09 This book examines British eugenics from its origins in 1865 to the early 1990s It considers the two institutions promoting the doctrine the Galton Laboratory attached to the University of London and the Eugenics Society It charts internal and ideological changes across more than a century seeing eugenics as primarily a political movement The doctrine had influence on British society and guided adherents ranging from scientists to charitable ladies The Galton Laboratory published detailed studies of heredity It transformed itself into a centre for medical genetics after the Second World War As early as the 1920s the Eugenics Society was the mainspring of the doctrine formulating what became the British version of an international ideology It began as applied social Darwinism later incorporating a greater degree of meritocracy and amelioration Its support for sterilization in the 1930s eroded the kudos it had gained in policy making circles From the 1960s organized eugenics was especially a forum for learned and popular discussion of biology and sociology Medical advances after 1970 aided its continuation notably the growth of assisted

reproductive technologies The book presents British eugenics as mostly shaped by domestic concerns offering new revelations and interpretations with the capacity to readjust historical thinking It also covers contemporary bioethical and political issues aligned to eugenics Key Concepts in Mental Health David Pilgrim,2017-02-27 This bestselling text provides a complete and concise overview of mental health and all the issues that surround it from a theoretical and practical perspective Social Mendelism Amir Teicher,2020-02-13 Will revolutionize reader s understanding of the principles of modern genetics Nazi racial policies and the relationship between them A Short History of Medical Genetics Peter S. Harper,2008-10-24 An eminent geneticist veteran author OMMG Series Editor and noted archivist Peter Harper presents a lively account of how our ideas and knowledge about human genetics have developed over the past century from the perspective of someone inside the field with a deep interest in its historical aspects Dr Harper has researched the history of genetics and has had personal contact with a host of key figures whose memories and experiences extend back 50 years and he has interviewed and recorded conversations with many of these important geneticists Thus rather than being a conventional history this book transmits the essence of the ideas and the people involved and how they interacted in advancing and sometimes retarding the field From the origins of human genetics through the contributions of Darwin Mendel and other giants the identification of the first human chromosome abnormalities and up through the completion of the Human Genome project this Short History is written in the author s characteristic clear and personal style which appeals to geneticists and to all those interested in the story of human genetics Love and Eugenics in the Late Nineteenth Century Angelique Richardson,2003 The idea of eugenics human selective breeding originated in Victorian Britain in response to the urban poor Darwin s evolutionary theory had laid the foundations for eugenics replacing paradise with primordial slime Man had not fallen from Grace but risen from the swamps And as architect of his own destiny he might rise still further Eugenics was developed by Darwin s cousin Francis Galton in the 1860s Embracing the idea of evolution eugenicists argued that through the judicious control of human reproduction and the numerical increase of the middle class Britain s supremacy in the world could be maintained Born and bred among the competitive Victorian middle class eugenics was a biologicistic discourse on class Aiming at racial improvement by altering the balance of class in society it was Galton argued practical Darwinism Eugenics found its most sustained expression in fiction and the periodical press and was central to late nineteenth century ideas on social progress forming part of the debate between hereditarians and environmentalists that peaked in the closing years of the century Even Gladstone had his vital statistics measured in Galton s eugenic laboratory Among the champions of eugenics were social purity feminists and New Women writers such as George Egerton Ellice Hopkins and Sarah Grand who argued that women were naturally biologically moral and that through rational reproduction middle class women could regenerate the British imperial race The New Woman has been the subject of numerous recent critical works However the oppressive ideas that coexisted with the emancipatory theories of some New Women ideas that were supremely

class conscious remain largely unexamined as the focus remains on her more progressive aspects Love and Eugenics in the Late Nineteenth Century recontextualizes New Woman writers demonstrating that they were as concerned with the questions of poverty sickness and health as they were with the changing role of women the issue for which they are currently generally known and celebrated Focusing on fiction and the press and drawing on the papers and published work of Galton and other eugenists Angelique Richardson reveals the cultural pervasiveness of eugenics and explores for the first time the intimate relations between early feminism and eugenics and making a radical contribution to nineteenth century studies

The Undesirables Sarah Wise,2024-04-04 Through the early twentieth century the British Government locked away over 50 000 innocent people Their crimes Being poor and unyielding This is their story A HISTORY TODAY BOOK OF THE YEAR Staggering Wise s book bristles with injustices Sunday Telegraph By 1950 an estimated 50 000 people had been deemed defective by the British government and detained indefinitely under the 1913 Mental Deficiency Act Their crimes were various women with children born out of wedlock rebellious teenagers caught shoplifting those with epilepsy hearing impairments and chronic illnesses who had struggled in school and many who were simply different Forcibly removed from their families and confined to a shadow world of specialist facilities in the countryside they were hidden away and forgotten out of sight out of mind Through painstaking archival research award winning historian Sarah Wise shines a light on this shameful chapter Piecing together the lives irrevocably changed by this devastating legislation The Undesirables provides a compelling study of how early twentieth century attitudes to class gender and disability resulted in a nationwide scandal and how they continue to shape social policy to this day The heartrending stories Sarah Wise has unearthed beggar belief beautifully researched and truly compelling Catherine Bailey author of Black Diamonds

Realising Health Philip Conford,2020-08-19 This book examines the history of the Pioneer Health Centre in Peckham South London and the various offshoots to which it gave rise A world renowned experiment in health creation it was nevertheless forced to close in 1950 but its example and ideas have continued to inspire doctors public health workers and community builders The text investigates the reasons why the Pioneer Health Centre and other initiatives have found it difficult to make headway It looks at factors such as financial and administrative problems various vested interests including those of pharmaceutical companies and the medical profession and underlying these considerations the tension between the principles of Hygieia the goddess of healthy living and Aesculapius the god of healing and surgery Our culture values those who try to put things right more than those who try to ensure they do not go wrong in the first place The book opens with a thorough examination of the concept of health sets the Pioneer Health Centre in its socio historical context and shows how a number of contemporary projects have been developed along broadly similar lines It draws on many primary sources and on interviews with people committed to the cause of realising health

Medicine and Medical Ethics in Nazi Germany Francis R. Nicosia,Jonathan Huener,2002-05-01 The participation of German physicians in medical experiments on innocent people and mass murder is

one of the most disturbing aspects of the Nazi era and the Holocaust Six distinguished historians working in this field are addressing the critical issues raised by these murderous experiments such as the place of the Holocaust in the larger context of eugenic and racial research the motivation and roles of the German medical establishment and the impact and legacy of the eugenics movements and Nazi medical practice on physicians and medicine since World War II Based on the authors original scholarship these essays offer an excellent and very accessible introduction to an important and controversial subject They are also particularly relevant in light of current controversies over the nature and application of research in human genetics and biotechnology
