Geoffrey Jones, Jonathan Zeitlin

Firms Markets And Economic Change:

Firms, Markets and Economic Change Richard N. Langlois, Paul L. Robertson, 1995-07-06 Traditional western forms of corporate organization have been called into question by the success of Japanese keiretsu. *Firms Markets and Economic Change* draws on industrial economics, business strategy and economic history to develop an evolutionary model to show when innovation is best undertaken. The authors argue that innovation is a complex process that defies neat categorization and government policy should be to facilitate change rather than to direct it.

Firms, Markets, and Contracts Ekkehart Schlicht, 2012-12-06 Modern institutional economics witnesses a merging of formal and informal strands of theorizing. This development has offered new and vigorous perspectives which avoid both arbitrariness and theoretical sterility. The essays on contract theory gathered here exemplify this development. They propound new results on central issues in contractual theorizing. The theory of the firm in its variegated aspects forms naturally the core of the present set of contributions. Issues of ownership, integration, delegation and finance are analyzed. Some contributions use the theoretical approach of contract theory to explore other issues like medical care, public good problems, the economics of crime, environmental economics and international trade. The contributors are leading young economists. They have participated in one or several classes of the International Summer School on the New Institutional Economics which has been organized by Rudolf Richter in the years 1988 through 1994 and is now continued by Urs Schweizer. The theoretical style of these contributions has been influenced by this experience. This collection of essays is intended to express the thanks of the contributors to Rudolf Richter. His initiatives for scholarly instruction and for international exchange of ideas have helped to create and to diffuse the understanding of and the engagement for the new institutional economics in Europe.

Firms, Markets and Hierarchies Glenn R. Carroll, David J. Teece, 1999-01-28 This book examines transaction cost economics, the influential theoretical perspective on organizations and industry that was the subject of Oliver Williamson's seminal book *Markets and Hierarchies* 1975. Written by leading economists, sociologists and political scientists, the essays collected here reflect the fruitful intellectual exchange that is occurring across the major social science disciplines. They examine transaction cost economics, general conceptual orientation, its specific theoretical propositions, its applications to policy and its use in systematic empirical research. The chapters include classic texts, broad review essays, reflective commentaries and several new contributions to a wide range of topics including organizations, regulations and law, institutions, strategic management, game theory, entrepreneurship, innovation, finance and technical information. The book begins with an overview of theory and research on transaction cost

economics highlighting the specific accomplishments of scholars working within the perspective and emphasizing the enormous influence that transaction cost reasoning exerts on the social sciences The following section covers conceptual uses for the transaction cost framework and major theoretical or methodological elements within it such as bounded rationality While advancing some interesting theoretical propositions these chapters are in fact more ambitious each examines a specific field area or research program and attempts to fashion a new way of thinking about research questions In the section on industrial applications contributors study the application of transaction cost theory to a range of problems in utilities telecommunications laser printing and early international trade The book closes with four microanalytical chapters that delve into the structures and behaviors of specific aspects of firms and organizations boards of directors equity structures employment models human resource policies and practices technology strategies and innovation events Firms Markets and Hierarchies collects excellent social science work on transaction cost economics taking stock of its status charting its future development and fostering its renewal and evolution

Industrial Clusters and Regional Business Networks in England, 1750-1970 John Wilson, Andrew Popp, 2017-07-05 Although economists have long recognised industrial districts as one of the key features of many economies it is only recently that attention has been focused on the region as an effective means of generating accurate insights into the larger picture of economic performance This renewed interest in regional issues has also placed at centre stage the role played by networks as a principal organisational feature of the local business community providing scholars with a rich topic for investigation and debate Recent work has shown that universal generalisations concerning the impact of networking on the performance of industrial clusters lack credibility highlighting the consequent need to compare the role played by business networks in a variety of regions Using a copious range of research material examining several British regions this volume poses a series of fundamental questions about the nature of industrial clusters and networks Particular attention is paid to identifying the basic characteristics of a network outlining how they evolved in key industrial clusters and assessing their impact on industrial performance both regionally and nationally The durability of such networks is another key thread that runs through the essays prompting comparison with industrial clusters in Britain and abroad These are issues which stimulate discussion on a wide range of factors within the disciplines of business economic and social history

Institutions and the Evolution of Modern Business Mark Casson, Mary B. Rose, 2014-01-14 The papers in this volume demonstrate that it can be fruitful to apply institutional theory to business history In addition the volume shows that the wider study of the institutional environment is inseparable from the study of business It is clear however that although institutionalism in business history has a long pedigree many areas of research and potential interaction with theory remain to be explored The extent to which this will occur inevitably depends upon the degree to which the interests of theoreticians serve the needs of historians and vice versa

Strategy, Economic Organization, and the Knowledge Economy Nicolai J. Foss, 2005-02-03 The rise of the knowledge economy has far

reaching implications for the nature of economic organization as well as firm strategy Not surprisingly thinking in management studies as well as in economics has been profoundly affected by these changes Thus management thinking in particular has been increasingly characterized by a schism between those who advocate knowledge or capabilities based approaches in the strategy and organization fields and those who adopt more economics influenced approaches notably the economics of organization This book is a sustained attempt to overcome this schism Its basic argument is that knowledge based and organizational economics approaches are not substitutes but complements In particular organizational economics has much to contribute with respect to furthering the understanding of efficient organization and strategy in the emerging knowledge economy This theme is taken through several theoretical as well as empirical variations Themes such as the incentive liabilities of flat knowledge based organizations and the role of complementary HRM practices for fostering knowledge sharing and creation are extensively treated The book thus contains important implications for knowledge management organizational design and firm strategy The book encompasses nine chapters which critically examine current thinking on strategy and organization The reasoning is non technical While primarily aimed at a management studies audience economists and other social scientists will also benefit from it including Advanced Students Academics and Researchers

Constructing Corporate America Kenneth Lipartito, David B. Sicilia, 2004 This collection of cutting edge research reviews the evolution of the American corporation the dominant trends in the way it has been studied and at the same time introduces some new perspectives on the historical trajectory of the business organization as a social institution The authors draw on cultural theory anthropology political theory and legal history to consider the place of the firm in nineteenth and twentieth century American Society

National Capitalisms, Global Competition, and Economic Performance Sigrid Quack, Glenn Morgan, Richard Whitley, 2000 Why are some firms successful on global markets whilst others are not In this collection of papers a group of distinguished international researchers examine the inter relationship between national context firm performance and global competitiveness In a series of empirical studies covering major industries such as banking telecommunications construction automobiles and airlines in a number of European countries Great Britain France Germany Holland Finland Slovenia the studies show how distinctive patterns of firm competences and capabilities arise from national contexts These influence the way in which firms perform in response to changing technologies and competitive pressures Thus the impact of the globalisation of economic activity may be to reinforce existing national differences in firm performance rather than producing a homogenisation and standardisation This book will be of interest to researchers in business and management sociology economics and political science for its comparative organizational approach to problems of economic performance

The General Theory of Economic Evolution Kurt Dopfer, Jason Potts, 2007-09-27 The first book to chart the development of the field of evolutionary economics this book provides an integrated generic framework to define the rules of an economic system how they are coordinated and the

causes and consequences of their change Packed with pedagogical features including essay and tutorial questions case studies and an extensive bibliography this book proposes a new analytic framework for the study of the nature and causes of long run economic growth and development in market systems analyzes the foundations of the neoclassical tradition before developing a thesis through micro meso and macro domains drawing conclusions as to what can be learned from the point of view of policy analysis focuses on an open systems analytical framework and successfully formulates and refines the analytical foundations of a new general theory of economic evolution This volume is essential reading for scholars and students of economic evolution and as well as for anyone who seeks to better understand the complex evolutionary nature of the structure and dynamics of the knowledge based economy in today s society Producing Prosperity Randall G. Holcombe,2013 The substantial prosperity that characterizes market economies at the beginning of the twenty first century is relatively recent in human history Prior to the Industrial Revolution economic progress was so slow that people would not have been able to recognize it in their lifetimes whereas today economic progress is so much a part of people s lives that they take it for granted In this new volume Randall G Holcombe argues that economic analysis as it developed through the twentieth century relies heavily on concepts of economic equilibrium and is not descriptive of the dynamic real world economy that is characterized by economic progress Even in dynamic settings economic models focus on income growth leaving out the entrepreneurial forces that generate economic progress resulting in the introduction of new goods and services and new production processes Economic analysis focuses on the forces that lead to an economic equilibrium not the forces that produce prosperity This characterization of economic analysis describes a substantial component of economics as it has developed over the past century However there are also economists who have analyzed the factors that lead to an entrepreneurial and innovative economy generating progress rather than equilibrium This volume does not question the value of past research but argues that looking ahead economics should build on its past to focus on factors that create an entrepreneurial and innovative economy that is characterized by progress and prosperity This would make economic analysis more consistent with the remarkable progress and prosperity that characterizes the modern economy This volume lays out a framework for economic analysis that consistently incorporates the real world factors that produce prosperity **The Oxford Handbook of Business History** Geoffrey Jones,Jonathan Zeitlin,2008-01-24 Introduction Approaches and debates Forms of business organization Functions of enterprise Enterprise and society Entrepreneurship and Economic Development in Hong Kong Tony Fu-Lai Yu,1997-07-31 This is the first systematic economic study of the nature operation and contribution of entrepreneurship to the growth of Hong Kong The author argues that the success of Hong Kong is due to adaptive entrepreneurship **Economic Studies on Food, Agriculture, and the Environment** Maurizio Canavari,Paolo Caggiati,K. William Easter,2012-12-06 This book contains a selection of the papers presented at the Joint Conference on Food Agriculture and the Environment which was held in Bologna Italy on June 12 14 2001 This was the seventh gathering of a

biennial meeting born from a cooperation agreement between US and Italian academic and research institutions This round of the Conference was organized in the Faculty of Agriculture in Bologna by the Dept of Agricultural Economics and Engineering DEIAgra and the CNR Land and Agri System Management Research Centre GeST A CNR of Bologna There were two main reasons for the choice of this location first the Conference was dedicated to Maurizio Grillenzoni and Franco Alvisi two colleagues and friends who passed away in recent years and who committed themselves and played an important role in developing the collaboration agreement and promoting the past Conferences second in the year 2000 the Faculty of Agriculture in Bologna celebrated its first centennial and this Conference was part of a wide set of events organized to highlight the relevant role of the Faculty in the research activity both at an Italian and international level The Conference papers were articulated both in plenary and concurrent sessions dealing with key topics for agricultural economists A structure similar to the Conference was adopted for grouping the papers into the four sections contained in this book food nutrition and quality focusing i e
