First Of Bridge:

Rebooting AI Gary Marcus, Ernest Davis, 2020-08-25 Two leaders in the field offer a compelling analysis of the current state of the art and reveal the steps we must take to achieve a robust artificial intelligence that can make our lives better Finally a book that tells us what AI is what AI is not and what AI could become if only we are ambitious and creative enough Garry Kasparov former world chess champion and author of Deep Thinking Despite the hype surrounding AI creating an intelligence that rivals or exceeds human levels is far more complicated than we have been led to believe Professors Gary Marcus and Ernest Davis have spent their careers at the forefront of AI research and have witnessed some of the greatest milestones in the field but they argue that a computer beating a human in Jeopardy does not signal that we are on the doorstep of fully autonomous cars or superintelligent machines The achievements in the field thus far have occurred in closed systems with fixed sets of rules and these approaches are too narrow to achieve genuine intelligence The real world in contrast is wildly complex and open ended How can we bridge this gap What will the consequences be when we do Taking inspiration from the human mind Marcus and Davis explain what we need to advance AI to the next level and suggest that if we are wise along the way we won't need to worry about a future of machine overlords If we focus on endowing machines with common sense and deep understanding rather than simply focusing on statistical analysis and gathering ever larger collections of data we will be able to create an AI we can trust in our homes our cars and our doctors offices Rebooting AI provides a lucid clear eyed assessment of the current science and offers an inspiring vision of how a new generation of AI can make our lives better *The First Bridge Book* Jeremy Flint, J. hardware and architecture It then develops fifteen principles key to breaking these bottlenecks systematically applying them to bottlenecks found in end nodes interconnect devices and specialty functions located along the network Later sections discuss the inherent challenges of modern cloud computing and data center networking Offers techniques that address common bottlenecks of interconnect devices including routers bridges gateways endnodes and Web servers Presents many practical algorithmic concepts that students and readers can work with immediately Revised and updated throughout to discuss the latest developments from authors courses including measurement algorithmics randomization regular expression matching and software defined networking Includes a new rich set of homework exercises and exam questions to facilitate classroom use Wiseman Review ,1878 *United States Coast Pilot* ,1916 **Documents of the Senate of the State of New York** New York (State).
