## **Fisheries Management Theoretical Developments And Contemporary Applications:**

*Fisheries Management* Geoffrey Waugh, 2019-03-04 Among the problems of the modern fisheries industry is the persistent trend toward the severe depletion of fish stocks resulting in low catch rates and poor economic returns along with unnecessary accumulations of capital investments Dr Waugh argues that these problems call for effective management procedures based on bioeconomic modelling which integrates the population dynamics of fish resources with the economic processes of harvesting and marketing Assessing developments in bioeconomic theory Dr Waugh discusses why recent advances have not been fully translated into improvements in the management of marine fisheries He cites the difficulties of reaching a consensus concerning suitable objectives for fisheries management as well as the problems of designing a regulatory framework to improve the operation of the industry To illustrate the utility of bioeconomic modelling Dr Waugh presents case studies of two Australian fisheries A dynamic stochastic numeric model is developed for the Exmouth Gulf Prawn Fishery to provide insights into the optimal exploitation of a yearly resource where fluctuations in recruitment natural mortality and catchability are important The study of the New South Wales Abalone Fishery highlights the difficulties of obtaining the necessary overview of a fishery and the problems in collecting the data required for modelling and management

*Reinventing Fisheries Management* T.J. Pitcher, P. Hart, D. Pauly, 2012-12-06 Judged by a dismaying track record and a consequent downturn in the reputation of fisheries scientists fisheries management is certainly a candidate for calls for reinvention with many of the world leaders in this area holding the view that no fishery has ever been properly understood or managed With fisheries science in a state of flux this extremely important book seeks a new paradigm that will place this flux of ideas in perspective and help us to choose those that will make fisheries management work The book was planned at a symposium of over 100 fishery researchers at the Fisheries Centre University of British Columbia Vancouver Canada and is organized into five parts Why does Fisheries Science Need Reinventing New Policies The Role of the Social Sciences Ecology Modelling Carefully integrated and edited by three of the world's leading fishery scientists this stimulating book should find a place on the shelves of all fishery scientists throughout the world It will be an invaluable reference source to those studying fish biology fisheries and oceanography and all those involved in fisheries policy decisions in government and university research establishments
