Exploring Aspects of Computational Chemistry Jean-Marie André, 1997 Pris ensemble les deux volumes offrent une introduction théorique et pratique la chimie quantique statistique Ce livre s'adresse un public spécialisé étudiants de licence doctorants chercheurs **Subject Guide to Books in Print**, 1996 **Books in Print Supplement**, 1994 *Scientific and Technical Books and Serials in Print*, 1989 *Scientific and Technical Books in Print*, 1972 **Charge Dynamics in Organic Semiconductors** Pascal Kordt, 2016-09-12 In the field of organic semiconductors researchers and manufacturers are faced with a wide range of potential molecules This work presents concepts for simulation based predictions of material characteristics starting from chemical structures The focus lies on charge transport be it in microscopic models of amorphous morphologies lattice models or large scale device models An extensive introductory review which also includes experimental techniques makes this work interesting for a broad readership Contents Organic Semiconductor Devices Experimental Techniques Charge Dynamics at Different Scales Computational Methods Energetics and Dispersive Transport Correlated Energetic Landscapes Microscopic Stochastic and Device Simulations Parametrization of Lattice Models Drift Diffusion with Microscopic Link **Books in Series**, 1985 Vols for 1980 issued in three parts Series Authors and Titles Transition Metal and Rare Earth Compounds Hartmut Yersin, 2003-07-01 There exists a large literature on the spectroscopic properties of copper II compounds This is due to the simplicity of the d electron configuration the wide variety of stereochemistries that copper II compounds can adopt and the flexible geometric behavior that they sometimes exhibit 1 The electronic and geometric properties of a molecule are inexorably linked and this is especially true with six coordinate copper II compounds which are subject to a Jahn Teller effect However the spectral structural correlations that are sometimes drawn must often be viewed with caution as the information contained in a typical solution UV Vis absorption spectrum of a copper II compound is limited Meaningful spectral structural correlations can be obtained in a related series of compounds where detailed spectroscopic data is available In the following sections two such series are examined the six coordinate CuF_6^{2-} and $6/2 \text{ Cu H}_2\text{O}$ ions doped as impurities in single crystal hosts Using low temperature polarized optical spectroscopy and electron paramagnetic resonance a very detailed picture can be drawn about the geometry of these ions in both their ground and excited electronic states We then compare the spectroscopically determined structural data with that obtained from X ray diffraction or EXAFS measurements Organic Compounds of Sulphur, Selenium and Tellurium Volume 4 D. R. Hogg, 1970 Annotation Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research Written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry For over 80 years the Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports However by 1967 the whole spectrum of chemistry could no

longer be contained within one volume and the series Specialist Periodical Reports was born The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic Organic and Physical Chemistry For more general coverage of the highlights in chemistry they remain a must Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry Some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued The current list of Specialist Periodical Reports can be seen on the inside flap of this volume

Rational Approaches to Structure, Activity, and Ecotoxicology of Agrochemicals Wilfried Draber, Toshio Fujita, 2024-12-11 This book presents discussions of the most important aspects in the development of agrochemicals The book covers such broad areas as structure activity and ecotoxicological analyses in comprehensive reviews for general methods and chronicles for individual examples Topics in structure activity relationships include how to combine submolecular structures of pharmacological interests and modify them according to chemorational models with computer aided procedures such as the traditional Hansch type QSAR the sequential simplex optimization and molecular modeling Topics in the ecotoxicology of organo phosphorus compounds are discussed in terms of the quantitative structure toxicity relationship QSTR Chronicles of molecular orbital methodology in predicting environmental fates of agrochemicals are also provided This volume will be invaluable for researchers in the agrochemical and pharmaceutical industries *Books in Print*, 1991 Catalog of Copyright Entries.
