Microcomputers and Laboratory Instrumentation David J. Malcolme-Lawes, 2012-12-06 The invention of the microcomputer in the mid 1970s and its subsequent low cost proliferation has opened up a new world for the laboratory scientist Tedious data collection can now be automated relatively cheaply and with an enormous increase in reliability New techniques of measurement are accessible with the intelligent instrumentation made possible by these programmable devices and the ease of use of even standard measurement techniques may be improved by the data processing capabilities of the humblest micro The latest items of commercial laboratory instrumentation are invariably computer controlled although this is more likely to mean that a microprocessor is involved than that a versatile microcomputer is provided along with the instrument It is clear that all scientists of the future will need some knowledge of computers if only to aid them in mastering the button pushing associated with gleaming new instruments However to be able to exploit this newly accessible computing power to the full the practising laboratory scientist must gain sufficient understanding to utilise the communication channels between apparatus on the laboratory bench and program within the computer This book attempts to provide an introduction to those communication channels in a manner which is understandable for scientists who do not specialise in electronics or computers

Practical Interfacing in the Laboratory Stephen E. Derenzo, 2003-05-29 This text describes in practical terms how to use a desk top computer to monitor and control laboratory experiments The author clearly explains how to design electronic circuits and write computer programs to sense analyse and display real world quantities including displacement temperature force sound light and biomedical potentials The book includes numerous laboratory exercises and appendices that provide practical information on microcomputer architecture and interfacing including complete circuit

diagrams and component lists Topics include analog amplification and signal processing digital to analog and analog to digital conversion electronic sensors and actuators digital and analog interfacing circuits and programming Only a very basic knowledge of electronics is assumed making it ideal for college level laboratory courses and for practising engineers and scientists
