Elements of Chemical and Physical Geology Volume 1 offers a comprehensive exploration of the fundamental principles governing the Earth's composition and structure. Authored by Gustav Bischof, John Drummond, and Benjamin H Paul, this volume delves into the chemical and physical processes that shape our planet. From detailed analyses of mineral formation to investigations of geological phenomena, the book provides a robust foundation in the earth sciences. Readers will gain insights into the interplay between chemistry, physics, and geology, making it an invaluable resource for students and researchers alike. The text covers a broad spectrum of topics, including mineralogy, petrology, and the chemical reactions that drive geological change. This historical work remains relevant for its thorough approach and foundational content in the field. This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it. This work was reproduced from the original artifact and remains as true to the original work as possible. ELEMENTS OF GEOLOGY S.M. MATHUR, 2008-04-22. Aimed at B Sc students of geology, this introductory text develops a basic understanding of the Earth as a complex evolving system of geological processes. This book will also be of immense use to those postgraduate students of geology who opt for this stream after graduating in disciplines other than geology. Geology as a science has recently gained increasing importance because of the current developments in oil and mineral exploration and also because of recent occurrences of earthquakes and tsunamis. This book covers the entire spectrum of the geologic concepts and relates them to the main processes of geomorphology, earthquakes, and volcanoes.

Important types of the three categories of rocks igneous sedimentary and metamorphic that form the crust of the Earth are described with their characteristic mineralogy Major structures that are born of tectonic activities are discussed Palaeontological descriptions cover not only the plant and animal groups but also other evidences of life in the geological record and evolution An important feature of the text is that modern stratigraphic methods of classification are outlined clearly and the latest geologic time scale with numerical ages as approved in 2004 by the International Commission on Stratigraphy of the International Union of Geological Sciences is incorporated
