Principles of Plant Biology for the Tropics Arthur Raymond Loveless,1983 Structure of the flowering plant Physiology of the flowering plant Physiology of the flowering plant The plant kingdom Ecology and genetics *Trophic Cascades* John Terborgh,James A Estes,2013-06-25 Trophic cascades the top down regulation of ecosystems by predators are an essential aspect of ecosystem function and well being Trophic cascades are often drastically disrupted by human interventions for

example when wolves and cougars are removed allowing deer and beaver to become destructive yet have only recently begun to be considered in the development of conservation and management strategies **Trophic Cascades** is the first comprehensive presentation of the science on this subject It brings together some of the world's leading scientists and researchers to explain the importance of large animals in regulating ecosystems and to relate that scientific knowledge to practical conservation Chapters examine trophic cascades across the world's major biomes including intertidal habitats coastal oceans lakes nearshore ecosystems open oceans tropical forests boreal and temperate ecosystems low arctic scrubland savannas and islands Additional chapters consider aboveground belowground linkages predation and ecosystem processes consumer control by megafauna and fire and alternative states in ecosystems An introductory chapter offers a concise overview of trophic cascades while concluding chapters consider theoretical perspectives and comparative issues **Trophic Cascades** provides a scientific basis and justification for the idea that large predators and top down forcing must be considered in conservation strategies alongside factors such as habitat preservation and invasive species It is a groundbreaking work for scientists and managers involved with biodiversity conservation and protection Primary Productivity of the Biosphere H. Lieth, R.H. Whittaker, 2012-12-06 The period since World War II and especially the last decade influenced by the International Biological Program has seen enormous growth in research on the function of ecosystems The same period has seen an exponential rise in environmental problems including the capacity of the Earth to support man's population The concern extends to man's effects on the biosphere the film of living organisms on the Earth's surface that supports man The common theme of ecologic research and environmental concerns is primary production the binding of sunlight energy into organic matter by plants that supports all life Many results from the IBP remain to be synthesized but enough data are available from that program and other research to develop a convincing summary of the primary production of the biosphere the purpose of this book The book had its origin in the parallel interests of the two editors and Gene E Likens which led them to prepare a symposium on the topic at the Second Biological Congress of the American Institute of Biological Sciences in Miami Florida October 24 1971 Revisions of the papers presented at that symposium appear as Chapters 2 8 9 10 and 15 in this book We have added other chapters that complement this core these include discussion and evaluation of methods for measuring productivity and regional production current findings on tropical productivity and models of primary productivity
