Ethics And Environmental Policy Theory Meets Practice:

Ethics and Environmental Policy Frederick Ferré, Peter Hartel, 1994 In this collection of essays leading environmentalists and philosophers explore the relationship between environmental ethics and policy both in theory and practice The first section of the book focuses on four approaches to change in ethical theory ecological science feminist metaphysics Chinese philosophy and holistic postmodern technology In subsequent sections the contributors emphasize the need for nontraditional solutions and attempt to expand awareness of the most pressing practical problems Among the topics discussed are the possibilities of real international cooperation the inequitable but economically intractable issue of global gasses the political and ethical challenges of city planning and the growing evidence of fundamental inappropriateness in treating land as legal private property This volume is based on essays presented in 1992 at the Second International Conference on Ethics and Environmental Policy The conference was held in response to the increasing need for a new ethics that would counter the traditional human centered dominantly individualistic approach of the industrial world toward the Environmental Ethics and Policy-Making Mikael Stenmark, 2017-03-02 Environmental issues raise environment crucial questions What should we value What is our place in nature What kind of life should we live How should we interact with other living things Environmental management and policy making is ultimately based on answers to these and similar questions but do we need a new ethics to be able overcome the environmental crisis we face This book addresses these important questions and explores the values that decision makers often presuppose in their environmental policy making Examining the content of the ethics of sustainable development that the UN and the world's governments want us to embrace this book examines alternatives to this kind of ethics and the differences in basic values that these make in practice Offering a detailed analysis of the ethics that lie behind current policy making as it is expressed in documents such as Agenda 21 and the Rio Declaration this unique contribution to the field of environmental studies shows how different environmental ethical theories support different goals of environmental management and generate different policies when it comes to population growth agriculture and preservation and management of wilderness areas and endangered species Mikael Stenmark concludes that policy makers must take more seriously the value assumptions and conflicts connected to environmental issues and state explicitly on what values their own proposals and decisions are based and why these should be accepted Those studying environmental issues or environmental philosophy will find this accessible text invaluable in presenting a clear understanding of environmental ethics and contemporary applications and policies Global Biopiracy Ikechi Mgbeoji, 2011-11-01 Legal control and ownership of plants and traditional knowledge of the uses of plants TKUP is a vexing issue The phenomenon of appropriation of plants and TKUP otherwise known as biopiracy thrives in a cultural milieu where non Western forms of knowledge are systemically marginalized and devalued as folk knowledge or characterized as inferior Global Biopiracy rethinks the role of international law and legal concepts the Western based Eurocentric patent

systems of the world and international agricultural research institutions as they affect legal ownership and control of plants and TKUP The analysis is cast in various contexts and examined at multiple levels The first deals with the Eurocentric character of the patent system international law and institutions. The second involves the cultural and economic dichotomy between the industrialized Western world and the westernizing developing world The third level of analysis considers the phenomenal loss of human cultures and plant diversity Exhaustively researched and eloquently argued Global Biopiracy sheds new light on a contentious topic The impact of intellectual property law on indigenous peoples and informal or traditional innovations is a field of study that currently includes only a handful of scholars Biopiracy will be an invaluable resource for students teachers and legal practitioners Land, Value, Community Wayne Ouderkirk, Jim Hill, 2012-02-01 Land Value Community provides an in depth critical study of the theories of J Baird Callicott one of the world's foremost environmental philosophers An international group of scholars representing philosophy ecology ecofeminism Native American studies political science and religion studies critically assesses Callicott's contributions to environmental ethics and philosophy and presents alternative perspectives from their own work Each section consists of several authors focusing on one aspect of Callicott's thought raising questions not only for Callicott but also for anyone affected by environmental issues A noteworthy feature of the book is Callicott's own response to his critics. This volume allows readers to explore multiple avenues in their search for answers to the significant philosophical questions raised by environmental problems Power of Words in International Relations Charlotte Epstein, 2008-10-03 The role of discursive power in shaping international relations analyzed through the lens of whaling politics In the second half of the twentieth century worldwide attitudes toward whaling shifted from widespread acceptance to moral censure Why Whaling once as important to the global economy as oil is now had long been uneconomical Major species were long known to be endangered Yet nations had continued to support whaling In The Power of Words in International Relations Charlotte Epstein argues that the change was brought about not by changing material interests but by a powerful anti whaling discourse that successfully recast whales as extraordinary and intelligent endangered mammals that needed to be saved Epstein views whaling both as an object of analysis in its own right and as a lens for examining discursive power and how language materiality and action interact to shape international relations By focusing on discourse she develops an approach to the study of agency and the construction of interests that brings non state actors and individuals into the analysis of international politics Epstein analyzes the society of whaling states as a set of historical practices where the dominant discourse of the day legitimated the killing of whales rather than their protection She then looks at this whaling world's mirror image the rise from the political margins of an anti whaling discourse which orchestrated one of the first successful global environmental campaigns in which saving the whales ultimately became shorthand for saving the planet Finally she considers the continued dominance of a now taken for granted anti whaling discourse including its creation of identity categories that align with and sustain the existing international

political order Epstein's synthesis of discourse power and identity politics brings the fields of international relations theory and global environmental politics into a fruitful dialogue that benefits both **Ecological Sustainability and Integrity:** Concepts and Approaches J. Lemons, L. Westra, Robert Goodland, 1997-12-31 This book follows upon earlier work which culminated in the publication of two recent books Sustainable Development Science Ethics and Public Policy John Lemons and Donald A Brown editors and Perspectives on Ecological Integrity Laura Westra and John Lemons editors Both of these books also were published by Kluwer Academic Publishers In this book we seek to explore more fully the concepts of sustainability and ecological integrity as well as the connections between them We have divided chapters into three groups In the first the concept of sustainability in relation to science law and ethics is explored In the second concepts of sustainability and ecological integrity are applied to problems in specific natural resources Finally in the third group we examine possible approaches to public policy which might include concepts of sustainability and ecological integrity Overall we believe that this collection presents a wide variety of perspectives discussions and case studies John Lemons Laura Westra Robert Goodland Editors ix CONTENTS PART I Sustainability in Relation to Science Law and Ethics Chapter 1 The Concept of Sustainability A Critical Approach Lynton K Caldwell 1 Problems of Definition 2 2 Behavioral Obstacles 4 3 Psychological Obstacles Seven Deadly Sins of Unsustainability 8 4 Ecocritics and Ecoskeptics Jonathan F. Krell, 2020 Ecocritics and Ecoskeptics examines environmental themes and questions about the evolving relationship between humans and animals in nine modern and contemporary French novels Considering arguments from both environmentalists and ecoskeptics it concludes that far from distancing itself from humanism as it often has environmentalism must embrace an inclusive and ecological humanism The Challenge of Globalization for Germany's Social Democracy Dieter Dettke, 1998-12-01 Modell Deutschland once admired worldwide has lost much of its shine due to a number of internal and external factors This important and timely volume deals with the economic andpolitical pressures and challenges of globalization and is particularly concerned with their effecton social policy labor markets environmental policies and technological change Distinguishedacademic experts and leading politicians discuss these problems both from an international perspective and against the background of debates currently going on in Germany Who Guards the Guardians? Peter Raine, 2003 This book attempts to link ecology philosophy and theology through an exploration of a new model of intercultural dialogue Case studies provide practical and theoretical applications which lead to a deeper understanding of not only environmental guardianships but also the fundamental relationship between human beings and The Politics of Actually Existing Unsustainability John Barry, 2012-02-23 At the level of developing a nature s being progressive and critical theoretical understanding of unsustainability it argues for the importance of integrating vulnerability which has been largely neglected by both mainstream western political theory and analyses of the current global ecological crisis It suggests that valuable insights into the causes of and alternatives to unsustainability can be found in a critical

embracing of human vulnerability and dependency as both constitutive and ineliminable aspects of what it means to be human Rather than seeing invulnerability as the appropriate response the book defends resilience and the ability to cope with rather than solve vulnerability as more productive Ecological Relations Susan Board, 2003-08-29 International relations IR traditionally theorises the social relationships between different peoples In so doing it ignores the ecological bases to life the ground upon which we walk the all encompassing bind of nature In the current climate of environmental degradation international relations as a theory must in turn be altered By broadening the term relations to include this ecological framework international relations can be approached from a changed perspective In this book Susan Board uses a Foucauldian model of power to expand the boundaries of international relations She argues that relations can include other people or animals and are not exclusively between states Such a perspective acts to denaturalise the marginalization of women animals and indigenous peoples and hence expand the constrained discipline of IR By rethinking international relations to put ecological foundations first we are pushed to think and act with consideration of the long term sustainability of the global environment an ecological focus reminds us of our interdependence with our environment and all our neighbours The book raises conceptual and methodological issues that go directly to the heart of current critical engagements within the discipline of IR As such it will be of great interest to students and researchers in IR environmental Critical Animal Studies Atsuko Matsuoka, John Sorenson, 2018-02-05 This important book politics and political theory charts new territory by showcasing some of the newest developments in the rapidly growing field of Critical Animal Studies Critical Animal Studies presents a radical ethical and normative challenge to existing systems of power in the context of neoliberal capitalism and to the existential structure of speciesism. The essays in this book link activist and academic approaches to dismantle the exploitation and oppression of nonhuman animals Featuring an international team of contributors the book reflects the transdisciplinary character of Critical Animal Studies with chapters by activists and academics from disciplines across the social sciences including historical archaeology political science psychology geography law social work and philosophy The book provides advanced level students with an ideal introduction to a wide range of perspectives on Critical Animal Studies amongst other things proposing new ways of considering animal advocacy decolonization and liberation Philosophy and Revolutions in Genetics Keekok Lee, 2016-01-03 The last century saw two great revolutions in genetics the development of classic Mendelian theory and the discovery and investigation of DNA Each fundamental scientific discovery in turn generated its own distinctive technology Biotechnology is the offspring of the latter and is expected to be the driving force behind economic growth in the twenty first century. These two case studies enable the author to conduct a philosophical exploration of the relationship between fundamental scientific discoveries on the one hand and the technologies that spring from them on the other As such it is also an exercise in the philosophy of technology World in Transition: Ways Towards Global Environmental Solutions German Advisory Council on Global change

(WBGU), 2012-12-06 At the first Conference of the Parties of the Climate Convention in Berlin in Spring 1995 it became evident once again To counteract anthropogenic climate changes individuals as well as societies have to change their way of thinking and behavior This accounts for other areas of global environmental change as well Global trends like soil degradation loss of biological diversity water scarcity and population growth show little or no sign of improvement In fact in most areas a rapid deterioration has taken place In its latest Report the German Advisory Council on Global Change The Green State Robyn Eckersley, 2004-03-05 What would describes Ways Towards Global Environmental Solutions constitute a definitively green state In this important new book Robyn Eckersley explores what it might take to create a green democratic state as an alternative to the classical liberal democratic state the indiscriminate growth dependent welfare state and the neoliberal market focused state seeking she writes to navigate between undisciplined political imagination and pessimistic resignation to the status quo In recent years most environmental scholars and environmentalists have characterized the sovereign state as ineffectual and have criticized nations for perpetuating ecological destruction Going consciously against the grain of much current thinking this book argues that the state is still the preeminent political institution for addressing environmental problems States remain the gatekeepers of the global order and greening the state is a necessary step Eckersley argues toward greening domestic and international policy and law The Green State seeks to connect the moral and practical concerns of the environmental movement with contemporary theories about the state democracy and justice Eckersley's proposed critical political ecology expands the boundaries of the moral community to include the natural environment in which the human community is embedded This is the first book to make the vision of a good green state explicit to explore the obstacles to its achievement and to suggest practical constitutional and multilateral arrangements that could help transform the liberal democratic state into a postliberal green democratic state Rethinking the state in light of the principles of ecological democracy ultimately casts it in a new role that of an ecological steward and facilitator of transboundary democracy rather than a selfish actor jealously protecting its territory Biotechnology and the Challenge of Property Remigius N. Nwabueze, 2016-04-15 Biotechnology and the Challenge of Property addresses the question of how the advancement of property law is capable of controlling the interests generated by the engineering of human tissues Through a comparative consideration of non Western societies and industrialized cultures this book addresses the impact of modern biotechnology and its legal accommodation on the customary conduct and traditional beliefs which shape the lives of different communities Nwabueze provides an introduction to the legal regulation of the evolving uses of human tissues and its implications for traditional knowledge beliefs and cultures Explorations in Environmental Political Theory Joel Jay Kassiola, 2015-03-04 The contributors to this volume focus on the political and value issues that in their shared view underlie the global environmental crisis facing us today They argue that only by transforming our dominant values social institutions and way of living can we avoid ecological disaster **Understanding the City** John

Eade, Christopher Mele, 2011-07-15 This cutting edge multi disciplinary analysis looks ahead to the direction which urban studies is likely to take during the twenty first century **Ecoambiguity** Karen Thornber, 2012-03-02 Delving into the complex contradictory relationships between humans and the environment in Asian literatures **Justice—Citizenship in Biotic Communities** David R. Keller, 2019-03-30 This is the first book to outline a basic philosophy of ecology using the standard categories of academic philosophy metaphysics axiology epistemology aesthetics ethics and political philosophy The problems of global justice invariably involve ecological factors Yet the science of ecology is itself imbued with philosophical questions Therefore studies in ecological justice the sub discipline of global justice that relates to the interaction of human and natural systems should be preceded by the study of the philosophy of ecology This book enables the reader to access a philosophy of ecology and shows how this philosophy is inherently normative and provides tools for securing ecological justice The moral philosophy of ecology directly addresses the root cause of ecological and environmental injustice the violation of fundamental human rights caused by the inequitable distribution of the benefits economies and costs diseconomies of industrialism Philosophy of ecology thus has implications for human rights pollution poverty unequal access to resources sustainability consumerism land use biodiversity industrialization energy policy and other issues of social and global justice This book offers an historical and interdisciplinary exeges of the analysis is situated in the context of the Western intellectual tradition and includes great thinkers in the history of ecological thinking in the West from the natural sciences social sciences and humanities Keller asks the big questions and surveys answers with remarkable detail Here is an insightful analysis of contemporary classical and ancient thought alike in the ecological sciences the humanities and economics the roots and fruits of our concepts of nature and of being in the world Keller is unexcelled in bridging the is ought gap bridging nature and culture and in celebrating the richness of life its pattern process and creativity on our wonderland Earth Holmes Rolston III University Distinguished Professor Colorado State University Author of A New Environmental Ethics The Next Millennium for Life on Earth 2012 Mentored by renowned ecologist Frank Golley and renowned philosopher Frederick Ferr David Keller is well prepared to provide a deep history and a sweeping synthesis of the idea of ecology including the metaphysical epistemological and ethical aspects of that idea as well as the scientific I Baird Callicott University Distinguished Research Professor University of North Texas Author of Thinking Like a Planet The Land Ethic and the Earth Ethic 2013
