Euromat 99 Interface Controlled Materials:

Euromat 99, Interface Controlled Materials M. Rühle, H. Gleiter, 2000 A common feature of advanced functional materials such as thin films layered structures and all kinds of nanoscale materials ultrafine powders polycrystals nanocomposites nanoporous or nanotubular materials is that their properties are mainly influenced by the structure and composition of their surfaces and interfaces This book discusses the processing fabrication structure properties and applications of such interface controlled materials highlighting the problem of determining the structure and properties of these advanced materials by different techniques

Interface Controlled Materials M. Rühle, H. Gleiter, Deutsche Gesellschaft für Materialkunde, Federation of European Materials Societies, 2000 *Euromat 99, Microstructures, Mechanical Properties and Processes* Yves Bréchet, 2000-07-13 The relation between microstructures and mechanical properties has always been a challenge for materials science Modelling the formation properties and long term stability of microstructures is one of the most impressive and promising advances of modern materials science This book presents recent advances and challenges in this fast evolving cross disciplinary field It addresses applications of classical physical metallurgy and the need for new modelling approaches both on the analytical viewpoint and on the simulation side

EUROMAT 99: Interface controlled materials, 2000 *Euromat 99, Interface Controlled Materials* M. Rühle, H. Gleiter, 2000-09-11 A common feature of advanced functional materials such as thin films layered structures and all kinds of nanoscale materials ultrafine powders polycrystals nanocomposites nanoporous or nanotubular materials is that their properties are mainly influenced by the structure and composition of their surfaces and interfaces This book discusses the processing fabrication structure properties and applications of such interface controlled materials highlighting the problem of determining the structure and properties of these advanced materials by different techniques

Euromat 99, Materials for Buildings and Structures F. H. Wittmann, 2000 Building materials are experiencing degradation phenomena due to the long term action of the atmospheric components The understanding of the transport characteristics in concrete is a key issue to mitigate the deleterious consequences Conventional cement based materials suffer from a lack of ductility However modern cement compositions fiber materials and additions allow to engineer new products adjusted to the purpose These and several key topics for modern civil engineering are discussed in this book

EUROMAT 99, 2000 *Euromat 99, Surface Engineering* Heinz Dimigen, 2000-09-08 Surface technology is a truly interdisciplinary topic in materials science Nearly every component no matter whether made of steel metal alloys ceramics or plastic is coated prior to its application The integration of protective coatings into the design of complex components is becoming increasingly important and there is a great demand for novel coating processes comprising surface modification and deposition Modern coatings are being developed that can meet several functional requirements simultaneously e g transparent and electrically conductive coatings for display applications A special feature of this book is the section on laser surface treatment

Euromat 99, Ceramics G.

Müller,2000-08-15 Today the development of technical ceramics is mostly oriented towards a better control of the microstructure and resulting properties of these materials New forms of powders and microstructures are developed to enable the usage of ceramics in new application areas This goal may be reached by producing accurately reproducible reactive powders development of adapted sintering processes and by introducing new forms of composites In addition new methods offer new opportunities for materials development **Euromat 99, Microstructural Investigation and Analysis**

B. Jouffrey,J. Svejcar,2000 Modern understanding of materials include the approach at the microscopic or nanometric level In the best case imaging at the atomic level is possible These approaches are essential for instance in the exploration of interfaces surfaces and defects in crystals Several aspects can be explored the microstructure local element composition and chemical bonds This book presents the state of the art of modern investigation methods of materials **Euromat 99, Metal Matrix Composites and Metallic Foams**

T. W. Clyne,Frantisek Simancik,2000-07-13 It has become clearer which types of MMC systems are entering significant industrial use and what questions concerning their production and performance are of most pressing concern In addition intensive attention has been directed recently to metallic foams These can offer attractive combinations of properties including high specific stiffness and good energy absorbing properties particularly under compressive loading For both MMCs and metallic foams there is intense interest in processing aspects particularly in terms of cost minimisation consistent with retention of desirable microstructural features Euromat 99, Steels and Materials for Power Plants

Peter Neumann,D. Allen,Erich Tenckhoff,2000-09-11 Steels are by far the most important construction materials for many applications Many modern concepts of materials science are being used in steels e g in micro alloyed steels minute amounts of alloying elements form nanoscale carbides to yield superior strength values All of these mechanisms have to be controlled in the production facilities on a scale of hundreds of tons This book addresses these new concepts for improving the efficiency of production technologies *Euromat 99, Intermetallics and Superalloys*

D. G. Morris,S. Naka,A. Dlouhy,P. Caron,2000 Intermetallics are now close to the commercial application stage TiAl based alloys show good high temperature specific stiffness and strength while other intermetallics such as the iron aluminides and silicide based materials are especially attractive due to their good corrosion or oxidation resistance This book reviews activities that relate to improvements in processing methods and advances in the understanding of the property microstructure relationship

Sample Preparation Handbook for Transmission Electron Microscopy Jeanne Ayache,Luc Beaunier,Jacqueline Boumendil,Gabrielle Ehret,Danièle Laub,2010-07-03 Successful transmission electron microscopy in all of its manifestations depends on the quality of the specimens examined Biological specimen preparation protocols have usually been more rigorous and time consuming than those in the physical sciences For this reason there has been a wealth of scientific literature detailing specific preparation steps and numerous excellent books on the preparation of biological thin specimens This does not mean to imply that physical science specimen preparation is trivial For the most part most physical science thin

specimen preparation protocols can be executed in a matter of a few hours using straightforward steps Over the years there has been a steady stream of papers written on various aspects of preparing thin specimens from bulk materials However aside from several seminal textbooks and a series of book compilations produced by the Material Research Society in the 1990s no recent comprehensive books on thin specimen preparation have appeared until this present work first in French and now in English Everyone knows that the data needed to solve a problem quickly are more important than ever A modern TEM laboratory with supporting SEMs light microscopes analytical spectrometers computers and specimen preparation equipment is an investment of several million US dollars Fifty years ago electropolishing chemical polishing and replication methods were the principal specimen preparation methods

Euromat 99, Functional Materials K. Grassie, Erich Tenckhoff, G. Wegner, Jürgen Haußelt, Holger Hanselka, 2000-08-15 Functional materials often called smart or advanced materials offer new combinations of physical properties e.g. electrical optical or magnetic that make them attractive for use in such modern high tech industries as telecommunications or microelectronics In this book the fundamentals of functional materials from all classes of materials ceramics polymers metals and alloys are discussed as well as their applications in information technology fuel cells systems for renewable energy and sensors and actuators

Recent Advances in the Science and Technology of Zeolites and Related Materials, 2004-12-18 Recent Advances in the Science and Technology of Zeolites and Related Materials

Host-Guest-Systems Based on Nanoporous Crystals Franco Laeri, Ferdi Schüth, Ulrich Simon, Michael Wark, 2006-03-06 Interest in nanoporous crystals as host guest systems has risen dramatically over the past few years such that this fascinating class of substances now plays an important role not only in material sciences but also in numerous other disciplines such as organic or supramolecular chemistry With their unique characteristics nanoporous crystals offer a wide range of possible applications They are used as molecular sieves or membranes as well as catalytic converters This work presents the very first overview of this exciting field Readers will find everything they need to know about these unusual materials with all their many attributes Synthesis of host guest systems Description of the structural and dynamic aspects Electronic and optical characteristics of the materials Possible applications An indispensable reference for materials scientists as well as for catalytic and inorganic chemists and all those working in the field

Corrosion by Carbon and Nitrogen H. Grabke, M. Schütze, 2014-01-23 Metal dusting is a form of corrosion involving the disintegration of metals and alloys into a dust of graphite and metal particles when exposed to a carburizing atmosphere This important book reviews the factors affecting metal dusting and how it can be prevented in sectors such as the chemical and petrochemical industries and in the direct reduction of iron ores It also considers the related corrosion phenomena of carburization and nitridation After an introductory chapter setting out the key processes involved in metal dusting the book reviews how this corrosion process affects a range of metals such as iron and steel as well as nickel based and chromium based high temperature alloys There are chapters on the effects of particular gas mixtures on the corrosion process and on the use of coatings to prevent metal

dusting Processes involved in carburization and nitridation are also described and discussed With its distinguished editors and team of contributors Corrosion by carbon and nitrogen is a valuable reference for all those concerned with understanding and preventing these corrosion processes in various industries Reviews this corrosion process and how it affects the petrochemical and other industries Discusses the effect of particular gas mixtures on the corrosion process
