Worst-Case Execution Time Aware Compilation Techniques for Real-Time Systems Paul Lokuciejewski, Peter Marwedel, 2010-09-24 For real time systems the worst case execution time WCET is the key objective to be considered Traditionally code for real time systems is generated without taking this objective into account and the WCET is computed only after code generation Worst Case Execution Time Aware Compilation Techniques for Real Time Systems presents the first comprehensive approach integrating WCET considerations into the code generation process Based on the proposed reconciliation between a compiler and a timing analyzer a wide range of novel optimization techniques is provided Among others the techniques cover source code and assembly level optimizations exploit machine learning techniques and address the design of modern systems that have to meet multiple objectives Using these optimizations the WCET of real time applications can be reduced by about 30% to 45% on the average This opens opportunities for decreasing clock speeds costs

and energy consumption of embedded processors The proposed techniques can be used for all types real time systems including automotive and avionics IT systems *Dynamic Reconfiguration in Real-Time Systems* Weixun Wang, Prabhat Mishra, Sanjay Ranka, 2012-07-20 Given the widespread use of real time multitasking systems there are tremendous optimization opportunities if reconfigurable computing can be effectively incorporated while maintaining performance and other design constraints of typical applications The focus of this book is to describe the dynamic reconfiguration techniques that can be safely used in real time systems This book provides comprehensive approaches by considering synergistic effects of computation communication as well as storage together to significantly improve overall performance power energy and temperature **A Journey of Embedded and Cyber-Physical Systems** Jian-Jia Chen, 2020-07-30 This Open Access book celebrates Professor Peter Marwedel s outstanding achievements in compilers embedded systems and cyber physical systems The contributions in the book summarize the content of invited lectures given at the workshop Embedded Systems held at the Technical University Dortmund in early July 2019 in honor of Professor Marwedel s seventieth birthday Provides a comprehensive view from leading researchers with respect to the past present and future of the design of embedded and cyber physical systems Discusses challenges and potential solutions from theoreticians and practitioners on modeling design analysis and optimization for embedded and cyber physical systems Includes coverage of model verification communication software runtime systems operating systems and real time computing **Distributed Systems** Serge Haddad, Fabrice Kordon, Laurent Pautet, Laure Petrucci, 2013-01-09 In today s digital environment distributed systems are increasingly present in a wide variety of environments ranging from public software applications to critical systems Distributed Systems introduces the underlying concepts the associated design techniques and the related security issues Distributed Systems Design and Algorithms is dedicated to engineers students and anyone familiar with algorithms and programming who want to know more about distributed systems These systems are characterized by several components with one or more threads possibly running on different processors asynchronous communications with possible additional assumptions reliability order preserving etc local views for every component and no shared data between components This title presents distributed systems from a point of view dedicated to their design and their main principles the main algorithms are described and placed in their application context i e consistency management and the way they are used in distributed file systems **Visual Information Processing in Wireless Sensor Networks: Technology, Trends and Applications** Ang, Li-Minn, Seng, Kah Phooi, 2011-09-30 This book provides a central source of reference on visual information processing in wireless sensor network environments and its technology application and society issues *ACM SIGPLAN Notices* , 2006-07 *Techniques for Building Timing-Predictable Embedded Systems* Nan Guan, 2016-02-03 This book describes state of the art techniques for designing real time computer systems The author shows how to estimate precisely the effect of cache architecture on the execution time of a program how to dispatch workload on multicore processors to optimize resources

Dependable Embedded Systems Jörg Henkel, Nikil Dutt, 2020-12-09 This Open Access book introduces readers to many new techniques for enhancing and optimizing reliability in embedded systems which have emerged particularly within the last five years This book

introduces the most prominent reliability concerns from today's points of view and roughly recapitulates the progress in the community so far. Unlike other books that focus on a single abstraction level such as circuit level or system level alone, the focus of this book is to deal with the different reliability challenges across different levels starting from the physical level all the way to the system level cross layer approaches. The book aims at demonstrating how new hardware software co design solution can be proposed to effectively mitigate reliability degradation such as transistor aging processor variation temperature effects soft errors etc. Provides readers with latest insights into novel cross layer methods and models with respect to dependability of embedded systems. Describes cross layer approaches that can leverage reliability through techniques that are proactively designed with respect to techniques at other layers. Explains run time adaptation and concepts means of self organization in order to achieve error resiliency in complex future many core systems.
