Segrave, 2014-09-06 Following the 2013 revelations of Edward Snowden Americans have come to realize that many of us may be under surveillance at any time It all started 150 years ago on the battlefields of the Civil War where each side tapped the other's telegraph lines It continued in 1895 when the New York Police Department began to tap telephone lines It was 20 years before it was public knowledge and by then the NYPD was so busy tapping they had a separate room set aside for the purpose Wiretapping really took off in 1910 when the dictograph the first ready to use bug that anyone could operate arrived making it easier still to engage in electronic surveillance Politicians bugged other politicians corporations bugged labor unions stockbrokers bugged other stockbrokers and the police bugged everybody And we were well on our way to the future that George Orwell envisioned the world Edward Snowden revealed Big Brother had arrived Electronic Technology, 1927

combination with external stimuli such as high magnetic or electric field spatial confinement in thin film heterostructures and the radiation with UV light This leads to new results in the fields of superconductivity electronic polarization states and nanoscale phenomena Among these the observation of anomalous polar moments is of great relevance for understanding the electric field induced metal to insulator transition and the demonstration that confocal Raman spectroscopy of backfolded acoustic photons in metal oxide multilayers can be used as a powerful characterization tool for monitoring their interface properties and layer thickness is an important technical development for the engineering of such functional oxide heterostructures

Stage Lighting Richard E. Dunham, 2015-10-30 The book's organization follows a layered approach that builds on basic principles Light as a Medium Part 1 Tools of a Lighting Designer Part 2 Design Fundamentals Part 3 and Lighting Applications Part 4 This presents students with a practical and logical sequence when learning basic concepts The full spectrum of the lighting design process is presented in detail giving students an example of how one might develop a lighting design from script analysis through concept and plot development and all the way to an opening This detailed process with a step by step design approach gives students a plan to work from which they can later modify as they mature and gain confidence as designers The text contains a more comprehensive discussion of basic technology light as a physical phenomena and methodology of designs than is found in most introductory texts bridging the gap between introductory and advanced lighting courses The text will appeal to theatrical designers who want to venture into areas of lighting like architectural or virtual lighting design while at the same time gaining a solid grounding in the fundamentals of lighting design Lighting Design will also benefit illuminating engineers who want to move away from mere computational approaches in lighting and on to explore techniques along the design approaches of theatrical lighting design The final 9 chapters cover many specialty areas of lighting design highlighting the unique and shared qualities that exist between the different aspects of these elements Discussions involve traditional entertainment areas like theatre as well as lesser known facets of the industry including film video landscape lighting retail museum lighting virtual lighting concert spectacle performances and architectural lighting Models of design tasks demonstrate the actual use and development of plots sections schedules photometrics tables and cut sheets rather than simply talking about what they are This hands on approach provides students with a firm understanding of how to actually use these tools and processes
