Extreme Sites Deborah Gans, Claire Weisz, 2004-05-21 Tackling a hot green architectural topic brownfield sites this title asks the essential question how should urban and post industrial sites best be rehabilitated to balance ecological and human needs This issue of AD is devoted to what planners refer to as brownfields These are often sites made toxic through a recipe of urbanism and industry from our great water thoroughfares to our landfills They are often the only sites available to us for planning consideration The book examines the conflict between the demands of ecology and development when reclaiming such sites for re development bringing together multiple viewpoints from different disciplines Includes the internationally renowned Andy Goldsworthy Glenn Murcutt and Renzo

emergence of the prefab as a unique housing form It examines the reasons prefabs have survived way beyond their design life of fifteen years when other post war housing types have been demolished There is no other single text that sets the temporary housing programme in context

From Formalism to Weak Form: The Architecture and Philosophy of Peter Eisenman Stefano Corbo, 2016-04-15 Peter Eisenman is one of the most controversial protagonists of the architectural scene who is known as much for his theoretical essays as he is for his architecture While much has been written about his built works and his philosophies most books focus on one or the other aspect By structuring this volume around the concept of form Stefano Corbo links together Eisenman's architecture with his theory From Formalism to Weak Form The Architecture and Philosophy of Peter Eisenman argues that form is the sphere of mediation between our body our inner world and the exterior world and as such it enables connections to be made between philosophy and architecture From the start of his career on Eisenman has been deeply interested in the problem of form in architecture and has constantly challenged the classical concept of it For him form is not simply a cognitive tool that determines a physical structure which discriminates all that is active from what is passive what is inside from what is outside He has always tried to connect his own work with the cultural manifestations of the time firstly under the influence of Colin Rowe and his formalist studies secondly by re interpreting Chomsky's linguistic theories in the 80's by collaborating with Derrida and his de constructivist approach more recently by discovering Henri Bergson's idea of Time These different moments underline different phases different projects different programmatic manifestos and above all an evolving notion of form Taking a multi disciplinary approach based on the intersections between architecture and philosophy this book investigates all these definitions and in doing so provides new insights into and a deeper understanding of the complexity of Eisenman's work

How to Read Architecture Paulette Singley, 2019-06-26 How to Read Architecture is based on the fundamental premise that reading and interpreting architecture is something we already do and that close observation matters This book enhances this skill so that given an unfamiliar building you will have the tools to understand it and to be inspired by it Author Paulette Singley encourages you to misread closely read conventionally read and unconventionally read architecture to stimulate your creative process This book explores three essential ways to help you understand architecture reading a building from the outside in from the inside out and from the position of out and out or formal architecture This book erodes boundaries between the frequently compartmentalized fields of interior design landscape design and building design with chapters exploring concepts of terroir scenography criticality atmosphere tectonics inhabitation type form and enclosure Using examples and case studies that span a wide range of historical and global precedents Singley addresses the complex interaction among the ways a building engages its context addresses its performative exigencies and operates as an autonomous aesthetic object Including over 300 images this book is an essential read for both undergraduate and postgraduate students of architecture with a global focus on the interpretation of buildings in their context
