First Steps Mental Maths For 78 Year Olds:

Numerical Development - From cognitive functions to neural underpinnings Korbinian Moeller, Elise Klein, Klaus F Willmes - von Hinckeldey, Karin Kucian, 2015-02-24 Living at the beginning of the 21st century requires being numerate because numerical abilities are not only essential for life prospects of individuals but also for economic interests of post industrial knowledge societies Thus numerical development is at the core of both individual as well as societal interests There is the notion that we are already born with a very basic ability to deal with small numerosities Yet this often called number sense seems to be very restricted approximate and driven by perceptual constraints During our numerical development in formal e g school but also informal contexts e g family street we acquire culturally developed abstract symbol systems to represent exact numerosities in particular number words and Arabic digits refining our numerical capabilities In recent years numerical development has gained increasing research interest documented in a growing number of behavioural neuro scientific educational cross cultural and neuropsychological studies addressing this issue Additionally our understanding of how numerical competencies develop has also benefitted considerably from the advent of different neuro imaging techniques allowing for an evaluation of developmental changes in the human brain In sum we are now starting to put together a more and more coherent picture of how numerical competencies develop and how this development is associated with neural changes as well In the end this knowledge might also lead to a better understanding of the reasons for atypical numerical development which often has grievous consequences for those who suffer from developmental dyscalculia or mathematics learning disabilities Therefore this Research Topic deals with all aspects of numerical development findings from behavioural performance to underlying neural substrates from cross sectional to longitudinal evaluations from healthy to clinical populations To this end we included empirical contributions using different experimental methodologies but also theoretical contributions review articles or opinion papers **Cognitive Development Today** Peter A A

Sutherland, 1992-05-28 At the end of the day what is crucial is to enable educationalists to promote and apply their own metatheories and models of child development which they feel comfortable with and which enable children to develop Peter Sutherland should be credited with making a significant contribution towards achieving this fundamental goal Educational Psychology in Practice this book deserves to become a classic in the field Will appeal alike to academics and students in higher education and to serving teachers BPS Educational Review Section This book provides a general outline of the dominant schools of thought on cognitive development with a focus on Piaget His views are outlined and a range of critical responses and alternatives are detailed The author examines the application of these schools of thought to teaching pre school primary and secondary children Each chapter includes a summary and questions for discussion The book concludes with a glossary of terms Current Index to Journals in Education, 1997 **Exceptional Child Education Resources**
