Metacognitive Approaches to Developing Oracy Roy Evans, Deborah Jones, 2013-09-13 The acquisition of speech and language represent significant achievements for all children These aspects of child development have received substantial attention in the research literature and a considerable body of theoretical knowledge exists to chart progress from infancy to maturity Cross cultural studies have identified the common purposes served by the acquisition of oral language by children and the essential similarity in the sequence through which speech develops irrespective of geography and culture What is less clear is precisely how children learn to say what they mean and how teachers and parents can support and enhance the development of meaningful speech in their children Until now children s speech has been underused as a means of promoting learning in the formal school setting New requirements within the National Curriculum are trying to address this gap but there remains a lack of clarity as to what this means for practice and how it relates to the broad base of curricular objectives This book brings together a body of work from different countries it offers an improved understanding of how strategies for developing speaking and listening may impact metacognitive awareness and raise standards of literacy and dialogic thinking for all children This book was previously published as a special issue of *Early Child Development and Care*

Early Language Development in Full-term and Premature infants Paula Menyuk, Jacqueline W. Liebergott, Martin C. Schultz, 2014-02-04 Designed to provide practical information to those who are concerned with the development of young children this book has three goals First the authors offer details about patterns of language development over the first three years of life Although intensive studies have been

carried out by examining from one to 20 children in the age range of zero to three years there has been no longitudinal study of a sample as large as this 53 children nor have as many measures of language development been obtained from the same children Examining language development from a broad perspective in this size population allows us to see what generalizations can be made about patterns of language development This volume s second goal is to examine the impact of such factors as biology cognition and communication input and the interaction of these factors which traditionally have been held to play an important role in the course of language development The comparative influence of each and the interaction of all three were examined statistically using children s scores on standard language tests at age three The volume s third goal is to provide information to beginning investigators early childhood educators and clinicians that can help them in their practice This includes information about what appear to be good early predictors of language development at three years language assessment procedures that can be used with children below age three how these procedures can be used what they tell us about the language development of young children and what warning signs should probably be attended to and which can most likely be ignored In addition suggestions are made about what patterns of communicative interaction during the different periods of development seem to be most successful in terms of language development outcomes at three years and what overall indications the study offers regarding appropriate intervention
