Great Currents of Mathematical Thought François Le Lionnais, 1971      **Great Currents of Mathematical Thought**  
François Le Lionnais, 1980-05-01      Explaining Beauty in Mathematics: An Aesthetic Theory of Mathematics Ulianov  
Montano, 2013-12-20 This book develops a naturalistic aesthetic theory that accounts for aesthetic phenomena in mathematics in the same terms as it accounts for more traditional aesthetic phenomena Building upon a view advanced by James McAllister the assertion is that beauty in science does not confine itself to anecdotes or personal idiosyncrasies but rather that it had played a role in shaping the development of science Mathematicians often evaluate certain pieces of mathematics using words like beautiful elegant or even ugly Such evaluations are prevalent however rigorous investigation of them of mathematical beauty is much less common The volume integrates the basic elements of aesthetics as it has been developed over the last 200 years with recent findings in neuropsychology as well as a good knowledge of mathematics The volume begins with a discussion of the reasons to interpret mathematical beauty in a literal or non literal fashion which also serves to survey historical and contemporary approaches to mathematical beauty The author concludes that literal approaches are much more coherent and fruitful however much is yet to be done In this respect two chapters are devoted to the revision and improvement of McAllister s theory of the role of beauty in science These antecedents are used as a foundation to formulate a naturalistic aesthetic theory The central idea of the theory is that aesthetic phenomena should be seen as constituting a complex dynamical system which the author calls the aesthetic as process theory The theory comprises explications of three central topics aesthetic experience in mathematics aesthetic value and aesthetic judgment The theory is applied in the final part of the volume and is used to account for the three most salient and often used aesthetic terms often used in mathematics beautiful elegant and ugly This application of the theory serves to illustrate the theory in action but also to further discuss and develop some details and to showcase the theory s explanatory capabilities      Love among the Poets  
Pearl Chaozon Bauer, Erik Gray, 2024-04-16 British literature of the Victorian period has always been celebrated for the quality innovativeness and sheer profusion of its love poetry Every major Victorian poet produced notable poems about love This includes not only canonical figures such as Alfred Lord Tennyson Robert and Elizabeth Barrett Browning and Christina Rossetti but also lesser known poets whose works have only recently become widely recognized and studied such as Augusta

Webster and the many often anonymous working class poets whose verses filled the pages of popular periodicals Modern critics have claimed convincingly that love poetry is not just one strain of Victorian poetry among many it is arguably its representative even definitive mode This collection of essays reconsiders the Victorian poetry of love and just as importantly of intimacy a more inclusive term that comprehends not only romance but love for family for God for animals and for language itself Together the essays seek to define a poetics of intimacy that arose during the Victorian period and that continues today a set of poetic structures and strategies by which poets can represent and encode feelings of love There exist many studies of intimate relations especially marriage in Victorian novels But although poetry rivals the novel in the depth and diversity of its treatment of love marriage and intimacy that aspect of Victorian verse has remained underexamined Love among the Poets offers an expansive critical overview With its slate of distinguished contributors including scholars from the US Canada Britain and Australia the volume is a wide ranging account of this vital era of poetry and of its importance for the way we continue to write love and live today

Mechanism, Mentalism and Metamathematics J. Webb, 2013-03-09 This book grew out of a graduate student paper 261 in which I set down some criticisms of J R Lucas attempt to refute mechanism by means of Gödel's theorem I had made several such abortive attempts myself and had become familiar with their pitfalls and especially with the double edged nature of incompleteness arguments My original idea was to model the refutation of mechanism on the almost universally accepted Gödelian refutation of Hilbert's formalism but I kept getting stuck on questions of mathematical philosophy which I found myself having to beg A thorough study of the foundational works of Hilbert and Bernays finally convinced me that I had all too naively and uncritically bought this refutation of formalism I did indeed discover points of surprisingly close contact between formalism and mechanism but also that it was possible to undermine certain strong arguments against these positions precisely by invoking Gödel's and related work I also began to realize that the Church Turing thesis itself is the principal bastion protecting mechanism and that Gödel's work was perhaps the best thing that ever happened to both mechanism and formalism I pushed these lines of argument in my dissertation with the patient help of my readers Raymond Nelson and Howard Stein I would especially like to thank the latter for many valuable criticisms of my dissertation as well as some helpful suggestions for reorganizing it in the direction of the present book

*The 21st Century Mathematics Education in China* Yiming Cao, Frederick K.S. Leung, 2017-10-11 This book intends to provide a comprehensive introduction to the status of development of Chinese mathematics education in the 21st century To this end the book summarizes and presents the research and practices of Chinese mathematics education in the following aspects 1 characteristics of Chinese school mathematics curriculum and textbooks 2 Chinese ways and strategies of teaching mathematics and the characteristics of mathematics classroom instruction in China 3 Chinese instructional practices in developing both gifted and underachieving students mathematical capabilities 4 how professional development of mathematics teachers is promoted in China including mathematics teachers pre service and in service education and how Chinese mathematics teachers design and implement teaching and research activities and 5 how mathematics education is assessed and evaluated including how to evaluate teachers teaching and students achievements Relevant research in Chinese mathematics education involving methods of surveys interviews text analysis etc are reviewed and analyzed Results of a number of video studies of Chinese mathematics classroom teaching and learning are also integrated into this book

**Resources in Education**, 2001-10 *Children's Mathematical Thinking in Primary Years* Julia Anghileri, 2005-05-01 This popular Continuum series intended chiefly for teachers and trainee teachers places strong emphasis on practice but at the same time incorporates the latest research in the field The book demonstrates a strong belief in the ability of children to learn and in the ability of teachers to increase children's learning potential The series authors are distinguished practitioners in their fields who write with authority but without jargon With the increasingly popular constructivist framework for learning teachers are coming to recognize the limitations of taught procedures and to find ways to encourage children to generate their own knowledge and understanding in mathematics The

challenge for teachers is to promote an environment that encourages mathematical thinking in which pupils of all abilities are able to achieve their full potential This text brings together experiences of teachers and researchers who examine the ways children work mathematically in order to provide an enhanced learning environment within the classroom It also addresses key issues in current maths teaching

**Assessment of Authentic Performance in School Mathematics**  
 Richard A. Lesh, Susan J. Lamon, 2013-04-03 This book is the result of a conference sponsored by the Educational Testing Service and the University of Wisconsin's National Center for Research in Mathematical Sciences Education The purpose of the conference was to facilitate the work of a group of scholars whose interests included the assessment of higher order understandings and processes in foundation level pre high school mathematics Discussions focused on such issues as the purposes of assessment guidelines for producing and scoring real life assessment activities and the meanings of such terms as deeper and higher order understanding cognitive objectives and authentic mathematical activities Assessment was viewed as a critical component of complex dynamic and continually adapting educational systems During the time that the chapters in this book were being written sweeping changes in mathematics education were being initiated in response to powerful recent advances in technology cognitive psychology and mathematics as well as to numerous public demands for educational reform These changes have already resulted in significant reappraisals of what it means to understand mathematics of the nature of mathematics teaching and learning and of the real life situations in which mathematics is useful The challenge was to pursue assessment related initiatives that are systematically valid in the sense that they work to complement and enhance other improvements in the educational system rather than act as an impediment to badly needed curriculum reforms To address these issues most chapters in this book focus on clarifying and articulating the goals of assessment and instruction and they stress the content of assessment above its mode of delivery Computer or portfolio based assessments are interpreted as means to ends not as ends in themselves Assessment is conceived as an ongoing documentation process seamless with instruction whose quality hinges upon its ability to provide complete and appropriate information as needed to inform priorities in instructional decision making This book tackles some of the most complicated issues related to assessment and it offers fresh perspectives from leaders in the field with the hope that the ultimate consumer in the instruction assessment enterprise the individual student will reclaim his or her potential for self directed mathematics learning
