MacKenzie, 2017-03-01 Imperial power both formal and informal and research in the natural sciences were closely dependent in the nineteenth century This book examines a portion of the mass produced juvenile literature focusing on the cluster of ideas connected with Britain's role in the maintenance of order and the spread of civilization It discusses the political economy of Western ecological systems and the consequences of their extension to the colonial periphery particularly in forms of forest conservation Progress and consumerism were major constituents of the consensus that helped stabilise the late Victorian society but consumerism only works if it can deliver the goods From 1842 onwards almost all major episodes of coordinated popular resistance to colonial rule in India were preceded by phases of vigorous resistance to colonial forest control By the late 1840s a limited number of professional positions were available for geologists in British imperial service but imperial geology had a longer pedigree Modern imperialism or municipal imperialism offers a broader framework for understanding the origins long duration and persistent support for overseas expansion which transcended the rise and fall of cabinets or international realignments in the 1800s Although medical scientists began to discern and control

the microbiological causes of tropical ills after the mid nineteenth century the claims for climatic causation did not undergo a corresponding decline Arthur Pearson's *Pearson's Magazine* was patriotic militaristic and devoted to royalty The book explores how science emerged as an important feature of the development policies of the Colonial Office CO of the colonial empire

**International Science and National Scientific Identity** R. W. Home, S.G Kohlstedt, 2012-12-06 The institutionalization of History and Philosophy of Science as a distinct field of scholarly endeavour began comparatively early though not always under that name in the Australasian region An initial lecturing appointment was made at the University of Melbourne immediately after the Second World War in 1946 and other appointments followed as the subject underwent an expansion during the 1950s and 1960s similar to that which took place in other parts of the world Today there are major Departments at the University of Melbourne the University of New South Wales and the University of Wollongong and smaller groups active in many other parts of Australia and in New Zealand Australasian Studies in History and Philosophy of Science aims to provide a distinctive publication outlet for Australian and New Zealand scholars working in the general area of history philosophy and social studies of science Each volume comprises a group of essays on a connected theme edited by an Australian or a New Zealander with special expertise in that particular area Papers address general issues however rather than local ones parochial topics are avoided Further more though in each volume a majority of the contributors is from Australia or New Zealand contributions from elsewhere are by no means ruled out Quite the reverse in fact they are actively encouraged wherever appropriate to the balance of the volume in question

**The Cultural Life of Images** Brian Leigh Molyneaux, 2013-10-18 Pictures are often admired for their aesthetic merits but they are rarely treated as if they had as much to offer as the written word They are often overlooked as objects of analysis themselves and tend to be seen simply as adjuncts to the text Images however are not passive and have a direct impact that engages attention in ways independent of any specific text Advertising entertainment and propaganda have realised the extent of this power to shape ideas but the scientific community has hitherto neglected the ways in which visual material conditions the ways in which we think With subjects including prehistoric artworks excavation illustrations artists impressions of ancient sites and peoples and contemporary landscapes photographs and drawings this study explores how pictures shape our perceptions and our expectations of the past This volume is not concerned with the accuracy of pictures from the past or directly about the past itself but is interested instead in why certain subjects are selected why they are depicted the way they are and what effects such images have on our idea of the past This collection constitutes a ground breaking study in historiography which radically reassesses the ways that history can be written

**The Uses of Experiment** David Gooding, Trevor Pinch, Simon Schaffer, 1989-05-18 Experiment is widely regarded as the most distinctive feature of natural science and essential to the way scientists find out about the world Yet there has been little study of the way scientists actually make and use experiments The Uses of Experiment fills this gap in our knowledge about how science is practised Presenting 14 original case studies of important and often famous experiments the book asks the questions What tools do experimenters use How do scientists argue from experiments What happens when an experiment is challenged How do scientists check that their experiments are working Are there differences between experiments in the physical sciences and technology Leading scholars in the fields of history sociology and philosophy of science consider topics such as the interaction of experiment instruments and theory accuracy and reliability as hallmarks of experiment in science and technology realising new phenomena the believability of experiments and the sort of knowledge they produce and the wider contexts on which experimentalists draw to develop and win support for their work Drawing on examples as diverse as Galilean mechanics Victorian experiments on electricity experiments on cloud formation and testing of nuclear missiles a new view of experiment emerges This view emphasises that experiments always involve choice tactics and strategy in persuading audiences that Nature resembles the picture experimenters create

The Truth of Science Roger G. Newton, 1997 It is not a scientific truth that has come into question lately but the truth the very notion of scientific truth Bringing a reasonable voice to the culture wars that have sprung up around this notion this book offers a clear and constructive response to those who contend in parodies polemics and op ed pieces that there really is no such thing as verifiable objective truth without which there could be no such thing as scientific authority A distinguished physicist with a rare gift for making the most complicated scientific ideas comprehensible Roger Newton gives us a guided tour of the intellectual structure of physical science From there he conducts us through the understanding of reality engendered by modern physics the most theoretically advanced of the sciences With its firsthand look at models facts and theories intuition and imagination the use of analogies and metaphors the importance of mathematics and now computers and the virtual reality of the physics of micro particles The Truth of Science truly is a practicing scientist's account of the foundations processes and value of science To claims that science is a social construction Newton answers with the working scientist's credo A body of assertions is true if it forms a coherent whole and works both in the external world and in our minds The truth of science for Newton is nothing more or less than a relentless questioning of authority combined with a relentless striving for objectivity in the full awareness that the process never ends With its lucid exposition of the ideals methods and goals of science his book performs a great feat in service of this truth
