**Towards Healthy**

**Settlements** Tianyao Zhang, 2024-04-30 This book aims to formulate recommendations for achieving a healthy neighborhood living environment for the middle income people in China s suburbs In China the expeditious urbanization triggers the prosperous commodity housing development which further grows with the spatial restructuring and socioeconomic transition

Residential suburbanization is generated accompanied with the emergence of new middle class and the change of lifestyle. However, the health effects of suburbanization in China are overlooked. This book investigates the health performance of suburban residents and the effects of suburban living on residents' health. This book also examines the resident environment transaction modes to unfold the underlying mechanism of suburban living affecting residents' health. Suburban residents had to passively adapt to their residential environment, which is the obstacle for achieving a health-promoting environment. The institutional dynamics determining the health performance of suburban living environment were addressed with the roles of governments, developers, planners, housing managers, residents' committee, and ordinary residents in commodity housing development. The book found no institutional support for the creation of health-promoting environments, especially with the default of governments and excessive dependence on developers for public service facilities and the absence of civil society. Thus, the book proposes that institutional innovations are necessary in terms of embedding the health dimension in all sectors of the society, enlisting collaboration between public and private sectors and between health and non-health sectors, and thus cultivating the optimization of residents' environment transactions to create health-promoting environments.

The Architecture of Industry Mathew Aitchison, 2016-03-16. From the Rust Belt to Silicon Valley, the intersection between architecture and industry has provided a rich and evolving source for historians of architecture. In a historical context, industrial architecture evokes the smoking factories of the nineteenth century or Fordist production complexes of the twentieth century. This book documents the changing nature of industrial building and planning from the end of the nineteenth century to the beginning of the twenty-first century. Drawing on research from the United States, Europe, and Australia, this collection of essays highlights key moments in industrial architecture and planning representative of the wider paradigms in the field. Areas of analysis include industrial production, factories, hydroelectricity, aerospace, logistics, finance, scientific research, and mining. The selected case studies serve to highlight architectural and planning innovations in industry and their contributions to wider cultural and societal currents. This richly illustrated collection will be of interest for a wide range of built environment studies incorporating findings from both historical and theoretical scholarship and design research.

**From Formalism to Weak Form: The Architecture and Philosophy of Peter Eisenman** Stefano Corbo, 2016-04-15. Peter Eisenman is one of the most controversial protagonists of the architectural scene, who is known as much for his theoretical essays as he is for his architecture. While much has been written about his built works and his philosophies, most books focus on one or the other aspect. By structuring this volume around the concept of form, Stefano Corbo links together Eisenman's architecture with his theory. *From Formalism to Weak Form: The Architecture and Philosophy of Peter Eisenman* argues that form is the sphere of mediation between our body, our inner world, and the exterior world, and as such, it enables connections to be made between philosophy and architecture. From the start of his career, Eisenman has been deeply interested in the problem of form in architecture and has constantly challenged the classical

concept of it For him form is not simply a cognitive tool that determines a physical structure which discriminates all that is active from what is passive what is inside from what is outside He has always tried to connect his own work with the cultural manifestations of the time firstly under the influence of Colin Rowe and his formalist studies secondly by re interpreting Chomsky s linguistic theories in the 80 s by collaborating with Derrida and his de constructivist approach more recently by discovering Henri Bergson s idea of Time These different moments underline different phases different projects different programmatic manifestos and above all an evolving notion of form Taking a multi disciplinary approach based on the intersections between architecture and philosophy this book investigates all these definitions and in doing so provides new insights into and a deeper understanding of the complexity of Eisenman s work *Architecture and Capitalism* Peggy Deamer,2013-07-18 *Architecture and Capitalism* tells a story of the relationship between the economy and architectural design Eleven historians each discuss in brand new essays the time period they know best looking at cultural and economic issues which in light of current economic crises you will find have dealt with diverse but surprisingly familiar economic issues Told through case studies the narrative begins in the mid nineteenth century and ends with 2011 with introductions by Editor Peggy Deamer to pull the main themes together so that you can see how other architects in different times and in different countries have dealt with similar economic conditions By focussing on what previous architects experienced you have the opportunity to avoid repeating the past With new essays by Pier Vittorio Aureli Ellen Dunham Jones Keller Easterling Lauren Kogod Robert Hewison Joanna Merwood Salisbury Robin Schuldenfrei Deborah Gans Simon Sadler Nathan Rich and Micahel Sorkin *Factory Towns of South China* 工厂镇 Stefan Al,2012-05-01 Most consumer products come primarily from the Pearl River Delta the factory of the world with the largest industrial region on earth The delta has attracted millions of poor rural residents to settle in factory towns in hopes for a better life *Factory Towns of South China* opens a window on these walled compounds exposing the gritty establishments crowded dormitories and monotonous labor carried out by workers Some function as self contained cities with their own fire brigade hospital bank TV station and as many as half a million workers living within the compounds Other factories are scattered in larger villages to mask their existence and evade governmental crackdowns on the production of fake consumer goods and illegal casino machines Contributors include David Bray Minnie Chan Jia Ching Chen Paul Chu Hoi Shan Eli Friedman Claudia Juhre Laurence Liauw Paul Lin Ting Shi Casey Wang Rex Wong and Chun Yang Stefan Al is director of the Urban Design Program at the University of Hong Kong *Narrative Space and Time* Elana Gomel,2014-02-18 Space is a central topic in cultural and narrative theory today although in most cases theory assumes Newtonian absolute space However the idea of a universal homogeneous space is now obsolete Black holes multiple dimensions quantum entanglement and spatio temporal distortions of relativity have passed into culture at large This book examines whether narrative can be used to represent these impossible spaces Impossible topologies abound in ancient mythologies from the Australian Aborigines dream time to the multiple layer universe of the Sumerians More

recently from Alice's adventures in Wonderland to contemporary science fiction's obsession with black holes and quantum paradoxes counter intuitive spaces are a prominent feature of modern and postmodern narrative With the rise and popularization of science fiction the inventiveness and variety of impossible narrative spaces explodes The author analyses the narrative techniques used to represent such spaces alongside their cultural significance Each chapter connects narrative deformation of space with historical problematic of time and demonstrates the cognitive and perceptual primacy of narrative in representing imagining and apprehending new forms of space and time This book offers a comprehensive analysis of the connection between narratology cultural theory science fiction and studies of place *The Urban Design Reader* Michael Larice, Elizabeth Macdonald, 2013-05-07 The second edition of *The Urban Design Reader* draws together the very best of classic and contemporary writings to illuminate and expand the theory and practice of urban design Nearly 50 generous selections include seminal contributions from Howard Le Corbusier Lynch and Jacobs to more recent writings by Waldheim Koolhaas and Sorkin Following the widespread success of the first edition of *The Urban Design Reader* this updated edition continues to provide the most important historical material of the urban design field but also introduces new topics and selections that address the myriad challenges facing designers today The six part structure of the second edition guides the reader through the history theory and practice of urban design The reader is initially introduced to those classic writings that provide the historical precedents for city making into the twentieth century Part Two introduces the voices and ideas that were instrumental in establishing the foundations of the urban design field from the late 1950s up to the mid 1990s These authors present a critical reading of the design professions and offer an alternative urban design agenda focused on vital and lively places The authors in Part Three provide a range of urban design rationales and strategies for reinforcing local physical identity and the creation of memorable places These selections are largely describing the outcomes of mid century urban design and voicing concerns over the placeless quality of contemporary urbanism The fourth part of the Reader explores key issues in urban design and development Ideas about sprawl density community health public space and everyday life are the primary focus here Several new selections in this part of the book also highlight important international development trends in the Middle East and China Part Five presents environmental challenges faced by the built environment professions today including recent material on landscape urbanism sustainability and urban resiliency The final part examines professional practice and current debates in the field where urban designers work what they do their roles their fields of knowledge and their educational development The section concludes with several position pieces and debates on the future of urban design practice This book provides an essential resource for students and practitioners of urban design drawing together important but widely dispersed writings Part and section introductions are provided to assist readers in understanding the context of the material summary messages impacts of the writing and how they fit into the larger picture of the urban design field

Chinese Cities as Pedagogy Jiawen Han, Xianwen Kuang, Guanghui Ding, 2025-03-17 The book introduces innovative

teaching practices and methods with a critical focus on understanding and interpreting Chinese cities as a rich context It highlights the advantages of interdisciplinary teaching in creating new learning experiences for students Additionally the book provides thorough mapping of the applied methods across disciplines and offers deeper reflections on the emerging pedagogy

*China Homegrown* Andong Lu, Pingping Dou, 2019-02-07 Today architecture in China is at a watershed Over the last decade rapid urbanisation and the burgeoning economy turned the country into a playground for the world s signature architects making it possible to realise extravagant forms and structures at a vast scale The Chinese government has now drawn a line under this phenomenon by issuing a directive calling an end to the oversized xenocentric weird buildings devoid of character or cultural heritage that have sprung up across the country requiring that urban architecture be suitable economic green and pleasing to the eye This government directive comes at a time when homegrown architecture has become increasingly self assured and reflective in its approach A new generation of architects in China in their 30s and 40s are emerging and in a wholly contemporary way they are exploring local responses to often bewildering urban and rural conditions and serious social and environmental challenges This is often expressed through a revival of

interest in traditional street patterns courtyards and gardens At the same time architects are also recognising the opportunities to harness the potential of China s established manufacturing base to develop prefabricated building systems Innovative practices are employing new modes of working such as research based studio teaching and exhibitions field workshops cross disciplinary collaboration laboratory based practice design think tanks and collective projects generating a vibrant culture of design research Contributors Lu Feng Murray Fraser Xiao Fu and Wei You Xiahong Hua and Shen Zhuang Xinggang Li Yichun Liu James Shen Yehao Song Hui Wang Shuo Wang Xin Wang and Qiuye Jin Philip F Yuan and Xiang Wang Li Zhang Xin Zhang and Jingxiang Zhu Featured architects Archi Union Architects Atelier Archmixing Atelier Deshaus Atelier Li Xinggang Integrated Architecture Studio LanD Studio META Project People s Architecture Office SUP Atelier URBANUS and Zaoyuan Gardening Studio
