Macnab,2010-09-02 Science education at school level worldwide faces three perennial problems that have become more pressing of late These are to a considerable extent interwoven with concerns about the entire school curriculum and its reception by students The rst problem is the increasing intellectual isolation of science from the other subjects in the school curriculum Science is too often still taught didactically as a collection of pre determined truths about which there can be no dispute As a consequence many students do not feel any ownership of these ideas Most other school subjects do somewhat better in these regards For example in language classes students suggest different interpretations of a text and then debate the relative merits of the cases being put forward Moreover ideas that are of use in science are presented to students elsewhere and then re taught often using different terminology in science For example algebra is taught in terms of  $x, y, z$  in mathematics classes but students are later unable to see the relevance of that to the meaning of the universal gas laws in physics where  $p, v, t$  are used The result is that students are confused and too often alienated leading to their failure to achieve that extraction of an education from a scheme of instruction which Jerome Bruner thought so highly desirable      Multiple Representations in Physics Education David F. Treagust,Reinders Duit,Hans E. Fischer,2017-07-24 This volume is important because despite various external representations such as analogies metaphors and visualizations being commonly used by physics teachers educators and researchers the notion of using the pedagogical functions of multiple representations to support teaching and learning is still a gap in physics education The research presented in the three sections of the book is introduced by descriptions of various psychological theories that are applied in different ways for designing physics teaching and learning in classroom settings The following chapters of the book illustrate teaching and learning with respect to applying specific physics multiple representations in different levels of the education system and in different physics topics using analogies and models different modes and in reasoning and representational competence When multiple representations are used in physics for teaching the expectation is that they should be successful To ensure this is the case the implementation of representations should consider design principles for using multiple representations Investigations regarding their effect on classroom communication as well as on the learning results in all levels of schooling and for different topics of physics are reported The book is intended for physics educators and their students at universities and for physics teachers in schools to apply multiple representations in physics in a productive way      *Educating Teachers Online in Challenging Times* Kevin Wai Ho Yung,Hui Xuan Xu,2023-05-29 This edited collection documents the challenges experienced by teacher educators in service teachers and student teachers in Hong Kong triggered by protests civil unrest and the global outbreak of the COVID 19 pandemic and identifies innovative practices in curriculum pedagogy and assessment that have enabled them to overcome the challenges in online teaching It offers implications for teacher professional development

through reflective practices and the enhancement of the scholarship of teaching and learning in the teacher education sector in Hong Kong and beyond Teaching and learning in various education sectors in Hong Kong experienced unprecedented challenges starting in late 2019 The suspension of face to face teaching resulted in the reliance on e technology and online teaching and learning Many teachers and students felt unprepared and thus experienced emotional distress However the challenges opened up opportunities for teacher educators to revamp their instructional and assessment practices to cater for students learning needs in the online environment The chapters are split into five sections covering the situation of teacher education in challenging times stakeholders experiences and challenges in teaching and learning curriculum and pedagogical innovations assessment and feedback practices and finally scholarship of teaching and learning The book will be of particular interest to those who are committed to professional development through strengthening their reflective practice online teaching and the scholarship of teaching and learning It will also be an ideal text for education scholars and postgraduate students in curriculum planning innovative online pedagogies and assessment practices in teacher education and the broader higher education context

theory and research in an intellectually exciting field the present Handbook is essential Nathan Kogan PhD Professor Emeritus Department of Psychology New School for Social Research New York NY The concept of intellectual styles has had a controversial history based on diverse philosophical and theoretical foundations Most recently the idea of intellectual styles an umbrella term that covers such closely related constructs as cognitive styles learning styles teaching styles and thinking styles has gained momentum as an explanation for why different people succeed in different professional and organizational settings Previously it was thought that high achievers simply had more innate abilities than their less successful peers but research has shown that individuals have different intellectual styles that are better suited for varying types of contexts and problems Based on the most current and expansive research this handbook is the first to provide a comprehensive review of research on the construct of intellectual style from its foundations and development to its relations to allied constructs its roles in school and job performance its applications in various populations and its future This understanding of intellectual styles as a valid concept for both individuals and groups has far reaching implications for researchers in cross cultural psychology multicultural education organizational behavior and work performance and many other academic disciplines as well as practitioners in education and beyond
