Genetic Revolution And Human Rights The Oxford Amnesty Lectures 1998:

The Genetic Revolution and Human Rights Justine Burley, 1999 Are eugenics practices morally defensible Who should have access to genetic information about particular individuals What dangers for cultural and racial diversity do developments in genetics pose And how should scientific research be regulated and by whom These are some of the questions addressed in this book which comprises the 1998 Oxford Amnesty Lectures The lecturers are all respected in their specific field including Hilary Putnam Ian Wilmut co creator of Dolly the sheep and Jonathan Glover Each lecture is proceeded by a discussion article written by prominent lawyers scientists and philosophers and a foreword has been written by Richard Dawkins Fascinating and thought provoking this book is essential reading for all those interested in the future of genetics and humankind

The Genetic Revolution and Human Rights Justine Burley, 2023 Essential reading for all those interested in the future of genetics and humankind this book comprises the 1998 Oxford Amnesty Lectures Each lecture is followed by a discussion article written by a prominent lawyer scientist or philosopher

Cross-Cultural Perspectives on the (Im)Possibility of Global Bioethics J. Tao Lai Po-wah, 2013-11-21 The contributions to this volume grew out of papers presented at an international conference Individual Community Society Bioethics in the Third Millennium held in Hong Kong Special Administrative Region of the People's Republic of China between 25-28 May 1999 The conference was organized by the Centre for Comparative Public Management and Social Policy and Ethics in Contemporary China Research Group in the Faculty of Humanities and Social Sciences at the City University of Hong Kong The conference brought together scholars from east and west to investigate the challenges to caring and to traditional moral authorities that would confront bioethics in the third millennium They explored the implications of moral loss and moral diversity in post traditional and post modern societies and how these would shape the character of medical care and bioethics discourse in the new era A proceedings volume under the same title of Individual Community Society Bioethics in the Third Millennium was published in May 1999 for the conference meeting

Normative Foundations The National State and Beyond Distributive Justice Political Concepts Concepts and Methods in Social Philosophy Issues in Social and Political Philosophy Comprised of sixty nine newly commissioned essays by leading scholars from throughout the world The Routledge Companion to Social and Political Philosophy is the most comprehensive and authoritative resource in social and political philosophy for students and scholars Genetics and Gene Therapy Sheila A.M. McLean, 2017-09-08 Genetics and Gene Therapy shows the wide range of the debate and the very real significance that genetics and its associated developments have for human beings individually and collectively Few areas of science and medicine have resulted in the volume of academic and popular literature as has genetics The so called revolution in understanding of the causes of disease states and even behavioural traits has focussed public attention on the influence of genes in making us what we are Rapidly however the potential benefits of such understanding were overtaken in the public mind at least by the question of the possible negative implications of genetic knowledge and associated technologies The chapters in this volume show just how wide ranging concern has become ranging from regulation to cloning with the fear of discrimination in between Part One begins with a range of general discussions of about the genetic enterprise itself followed by consideration of some specific questions Part Two then addresses cutting edge debates in genetics **Ethics, Law and Society** Jennifer Gunning, 2022-07-30 This key collection brings together a selection of papers commissioned and published by the Cardiff Centre for Ethics Law Society It incorporates contributions from a group of international experts along with a selection of short opinion pieces written in response to specific ethical issues The collection addresses issues arising in biomedical and medical ethics ranging from assisted reproductive technologies to the role of clinical ethics committees It examines broader societal issues with particular emphasis on sustainability and the environment and also focuses on issues of human rights in current global contexts The contributors collect responses to issues arising from high profile cases such as the legitimacy of war in Iraq to physician related suicide The volume will provide a valuable resource for practitioners and academics with an interest in ethics across a range of disciplines Ethics, Law and Society Søren Holm, 2019-09-11 This key collection brings together a selection of papers commissioned and published by the Cardiff Centre for Ethics Law Society It incorporates contributions from a group of international experts along with a selection of short opinion pieces written in response to specific ethical issues The collection addresses issues arising in biomedical and medical ethics ranging from assisted reproductive technologies to the role of clinical ethics committees It examines broader societal issues with particular emphasis on sustainability and the environment and also focuses on issues of human rights in current global contexts The contributors collect responses to issues arising from high profile cases such as the legitimacy of war in Iraq to physician related suicide The volume will provide a valuable resource for practitioners and academics with an interest in ethics across a range of disciplines On Global Justice Mathias Risse, 2012-09-16 Debates about global justice have traditionally fallen into two camps Statists believe that principles of justice can only be held among those who share a state Those who fall

outside this realm are merely owed charity Cosmopolitans on the other hand believe that justice applies equally among all human beings On Global Justice shifts the terms of this debate and shows how both views are unsatisfactory Stressing humanity s collective ownership of the earth Mathias Risse offers a new theory of global distributive justice what he calls pluralist internationalism where in different contexts different principles of justice apply Arguing that statists and cosmopolitans seek overarching answers to problems that vary too widely for one single justice relationship Risse explores who should have how much of what we all need and care about ranging from income and rights to spaces and resources of the earth He acknowledges that especially demanding redistributive principles apply among those who share a country but those who share a country also have obligations of justice to those who do not because of a universal humanity common political and economic orders and a linked global trading system Risse s inquiries about ownership of the earth give insights into immigration obligations to future generations and obligations arising from climate change He considers issues such as fairness in trade responsibilities of the WTO intellectual property rights labor rights whether there ought to be states at all and global inequality and he develops a new foundational theory of human rights *On Cloning* John Harris,2004 John Harris presents an informed defence of human cloning carefully exposing the rhetorical and highly dubious arguments against it He shows that far from ending the diversity of human life cloning has the power to improve and heal human life

Autonomy and Trust in Bioethics Onora O'Neill,2002-04-18 Why has autonomy been a leading idea in philosophical writing on bioethics and why has trust been marginal In this important book Onora O'Neill suggests that the conceptions of individual autonomy so widely relied on in bioethics are philosophically and ethically inadequate and that they undermine rather than support relations of trust She shows how Kant s non individualistic view of autonomy provides a stronger basis for an approach to medicine science and biotechnology and does not marginalize untrustworthiness while also explaining why trustworthy individuals and institutions are often undeservingly mistrusted Her arguments are illustrated with issues raised by practices such as the use of genetic information by the police or insurers research using human tissues uses of new reproductive technologies and media practices for reporting on medicine science and technology Autonomy and Trust in Bioethics will appeal to a wide range of readers in ethics bioethics and related disciplines **Readings in Health Care**

Ethics - Second Edition Elisabeth (Boetzkes) Gedge,Wilfrid J. Waluchow,2012-03-14 Readings in Health Care Ethics provides a wide ranging selection of important and engaging contributions to the field of health care ethics The second edition adds a chapter on health care in Canada and the introduction has been expanded to include discussion of a new direction in feminist naturalized ethics The book presupposes no prior knowledge only an interest in the bioethical issues that are shaping our world **Rights, Wrongs and Responsibilities** M. Kramer,2001-10-10 In this wide ranging

investigation of many prominent issues in contemporary legal and political philosophy eight distinguished philosophers and legal theorists including Matthew Kramer Hillel Steiner Antony Duff Sandra Marshall Wilfrid Waluchow and Nicholas

Bamforth tackle issues such as the rights of animals and fetuses the relationship between law and politics the requirements of justice the demands of practical rationality the role of public policy considerations in legal reasoning the fundamental characteristics of legal and moral entitlements the appropriateness of compensation as a means of rectifying mishaps and misdeeds the extent of individuals responsibility for the consequences of their choices and the culpability of failed attempts to commit crimes Together the eight principal essays in Rights Wrongs and Responsibilities shed philosophical light on public law criminal law and most areas of private law as they explore the bearings of the three key concepts in the volume s title

Biotechnological and Medical Themes in Science Fiction Domna Pastourmatzi,2002 **Hillel Steiner and the Anatomy of Justice** Stephen De Wijze,Matthew H. Kramer,Ian Carter,2009-06-02 Throughout the English speaking world and in the many other countries where analytic philosophy is studied Hillel Steiner is esteemed as one of the foremost contemporary political philosophers This volume is designed as a festschrift for Steiner and as an important collection of philosophical essays in its own right The editors have assembled a roster of highly distinguished international contributors all of whom are eager to pay tribute to Steiner by focusing on topics on which he himself has concentrated Some of the contributors engage directly with Steiner s work whereas others focus not directly on his writings but instead grapple with issues that have figured prominently therein Each essay seeks to advance the debates in which Steiner himself has so notably participated The study concludes with a response by Steiner himself New Technologies and Human Rights Norberto Nuno Gomes de Andrade,Lúcio Tomé Féteira,2016-05-13 Whilst advances in biotechnology and information technology have undoubtedly resulted in better quality of life for mankind they can also bring about global problems The legal response to the challenges caused by the rapid progress of technological change has been slow and the question of how international human rights should be protected and promoted with respect to science and technology remains unexplored The contributors to this book explore the political discourse and power relations of technological growth and human rights issues between the Global South and the Global North and uncover the different perspectives of both regions They investigate the conflict between technology and human rights and the perpetuation of inequality and subjection of the South to the North With emerging economies such as Brazil playing a major role in trade investment and financial law the book examines how human rights are affected in Southern countries and identifies significant challenges to reform in the areas of international law and policy

Choosing Tomorrow's Children Stephen Wilkinson,2010-02-18 To what extent should parents be allowed to use reproductive technologies to determine the characteristics of their future children And is there something morally wrong with parents who wish to do this Choosing Tomorrow s Children provides answers to these and related questions In particular the book looks at issues raised by selective reproduction the practice of choosing between different possible future persons by selecting or deselecting for example embryos eggs and sperm Wilkinson offers answers to questions including the following Do children have a right to an open future and if they do what moral constraints does this place upon selective

reproduction Should parents be allowed to choose their future children's sex Should we screen out as much disease and disability as possible before birth or would that be an objectionable form of eugenics Is it acceptable to create or select a future person in order to provide lifesaving tissue for an existing relative Is there a moral difference between selecting to avoid disease and selecting to produce an enhanced child Should we allow deaf parents to use reproductive technologies to ensure that they have a deaf child

Ethical Issues in the New Genetics Michael Parker, 2017-11-22 This title was first published in 2003 Developments in genetic science are opening up new possibilities for human beings both the creation and the shaping of human life are now possible in the laboratory As these techniques develop questions are increasingly asked about how far everything that is scientifically possible should morally legally and socially be pursued Whilst much attention and policy making has focussed on the development of regulation of technologies affecting human reproduction regulation where plants and animals are concerned is much more limited In this book developments in genetics are addressed in the broad sense by an international range of contributors This includes not only issues such as eugenics and the modification of the human embryo but also the genetic modification of plants and animals in the pursuit of commerce agriculture and biomedical research This book is published in association with the Society for Applied Philosophy

Ethics and Humanity N. Ann Davis, Richard Keshen, Jeff McMahan, 2010-02-10 This book pays tribute to Jonathan Glover a pioneering figure whose thought and personal influence have had a huge impact on applied philosophy The papers collected here written by some of the most distinguished contemporary moral philosophers reflect the topics to which Glover has contributed Glover's replies to these papers constitute an important addition to his published work

Global Bioethics Ronald M. Green, Aine Donovan, Steven A. Jauss, 2008-11-06 Medical care and biomedical research are rapidly becoming global Ethical questions that once arose only in the narrow context of the physician patient relationship in relatively prosperous societies are now being raised across societies cultures and continents For example what should be the standard of care for clinical trials of medical innovations in poorer countries Are researchers obligated to compare new therapies or drugs with the best known ones available or can they use as a benchmark the actual treatments or lack of treatments available to poor people Should pharmaceutical companies seeking to lower the costs of new drug trials be allowed to enrol citizens of less developed countries in them even when those individuals cannot afford and will not be eligible for the resulting drugs More generally should the norms of medicine and research be the same across cultures or can they adapt to local social economic or religious conditions Global Bioethics gathers some of the world's leading bioethicists to explore many of the new questions raised by the globalization of medical care and biomedical research Among the topics covered are the impact of globalization on the norms of medical ethics the conduct of international research the ethics of international collaborations challenges to medical professionalism in the international setting and the relation of religion to global bioethics

Rationality and the Genetic Challenge Matti Häyry, 2010-02-11 Should we make people healthier smarter and longer lived if genetic and

medical advances enable us to do so Matti Häyry asks this question in the context of genetic testing and selection cloning and stem cell research gene therapies and enhancements The ethical questions explored include parental responsibility the use of people as means the role of hope and fear in risk assessment and the dignity and meaning of life Taking as a starting point the arguments presented by Jonathan Glover John Harris Ronald M Green Jürgen Habermas Michael J Sandel and Leon R Kass who defend a particular normative view as the only rational or moral answer Matti Häyry argues that many coherent rationalities and moralities exist in the field and that to claim otherwise is mistaken
