**Genetic Engineering** Michael Boylan, 2001      **Ethics and the New Genetics** H. Daniel Monsour, 2007-05-26 Everyday new advances are being made in the science of human genetics Accompanying progress in this area however are new ethical dilemmas At a think tank sponsored by the Canadian Catholic Bioethics Institute an interdisciplinary group of ethicists geneticists physicians lawyers and theologians gathered in an attempt to apply some features of Bernard Lonergan's notion of functional specialization to ethical debates surrounding genetics Editor H Daniel Monsour has brought together a series of articles presented at this think tank The articles accomplish two tasks first they explore some of the advances in human genetic that continue to prompt ethical debate and outline the different stances on those issues second they examine those stances in the context of Roman Catholic moral and religious thought Timely innovative and wide ranging this collection will be of interest to bioethicists and philosophers as well as religious and Lonerganian scholars      **Genetic Engineering** Mark Y. Herring, 2005-12-30 Genetic engineering has quickly become one of the more controversial issues of our time Herring provides a detailed history of the debate in a fair and balanced manner using proponents points of view to make individual cases both pro and con Narrative chapters cover such topics as the Human Genome Project gene splicing cloning genetically altered foods and DNA and crime solving Students and the general public will find a comprehensive survey of the genetic engineering debate Appendices include statements from Robert P George and Peter Singer two of the most prominent scholars on the subject and a bibliography of print and electronic resources for further research      Genetic Technology: A New Frontier Assessment Office Of Technology, 2020-09-23 First published in 1982 This report examines the application of classical and molecular genetic technologies to micro organisms plants and animals This book is one of the first comprehensive documents on emerging genetic technologies and their implications for society The authors discuss the opportunities and problems involved describe current techniques and attempt to project some of the economic environmental and institutional impacts of those techniques The issues they raise go beyond those of technology utility and economic feasibility As we gain the ability to manipulate life we must face basic questions of just what life means and how far we can reasonably and safely allow ourselves to go      **Gaia Connections** Alan S. Miller, 2003 Gaia Connections addresses several arenas of concern as humankind faces an escalating ecological and moral crisis in this new millennium Beginning with an overview of the history of philosophy and the importance of traditional thinking on modern day ethical reflection the book then looks at the development of theories of justice the problems of equity in global human relations the inability of existing economic systems to resolve our human and environmental dilemmas the unnatural connections now obtaining between genuine human need and the technological drift of science the new genetics and reproductive technologies and the nature of modern war The study concludes with some historical perspectives on American environmental history and the urgent need for change in our ecoethical social and value systems The principal focal areas of the original edition are continued the actual

state of the global environment today the imperative for the development of sustainable economic and resource systems the movement within much of science toward an almost universal biological determinism and the need for a reaffirmation of an ethical value system which places the needs of people before the needs of property and profits The revised edition not only updates these data and the concerns of the original book but also visits a number of new issues the movement for environmental justice the connections between global poverty and the now almost universal allegiance to a new world market and free trade system the progress and the dilemmas of molecular biology and genetic engineering and the growing disarray within the global systems of political economy

**Philosophy: Michael Boylan's Narrative Fiction** Wanda Teays, 2022-05-25 This volume offers original essays exploring what fictive narrative philosophy might mean in the research and teaching of philosophy The first part of the book presents theoretical essays that examine Boylan s recent books Teaching Ethics with Three Philosophical Novels and Fictive Narrative

Philosophy How Literature can Act as Philosophy The second and third part offer essays on how Boylan executes his theory in the practice within his novels from his two series De Anima and Arch The book clearly shows the unique aspects of the fictive narrative philosophy approach First it makes story telling accessible to wide audiences Second story telling techniques invoke devices that can set out complicated existential problems to the reader that offer an additional approach to thorny problems through the presentation of lived experience Third the discussion of these devices is a way to explore philosophical problems in a way that many can profit from The book concludes with an essay in which Boylan responds to the critical challenges set out in Part One and the practical criticism set out in Parts Two and Three Boylan addresses the key claims made by his objectors and defends his position He engages with the authors in the way his theory is matched against his actual novels This is useful reading for both philosophers and professors of literature teaching introductory as well as upper level courses in the fields of philosophy literature and criticism *Public Health Policy and Ethics* Michael
